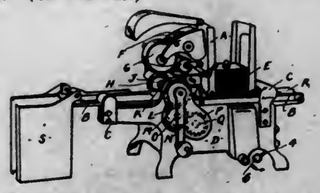
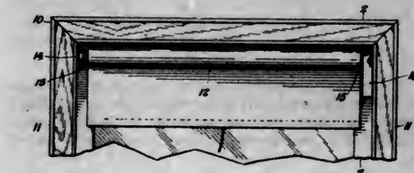
An adjustable hinge for wind-screens of motor-cars comprising a fixed inner member, a split outer tube rotatable about the fixed inner member, lugs upon opposite sides of the slit in the outer tube, a screw-pin carried by one of the lugs and passing through a plain hole in the other lug, a rotatable screw clamping device on the screw pin said screw clamping device being recessed in the end opposed to the lug with the plain hole, a ball race member located within the recess so that the walls of the latter extend beyond the said race member, and a collar fixed upon the lug with the plain hole and having recesses in its face, and anti-friction balls located and retained in said recesses and engaged by the ball race member within the recess in the clamping member.

1,482,211. HOLLOW THROTTLE VALVE. SAMUEL BAILIB, Camden, N. J. Filed Nov. 12, 1921. Serial No. 514,636. 7 Claims. (Cl. 251—78.)



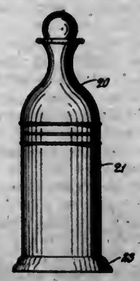
7. In a device of the character stated, a valve casing adapted to be disposed in a bore across a pressure fluid passageway and having means to divide the bore in which said casing is adapted to be disposed into two compartments, said casing having inlet ports to one side of said means and also having outlet ports to the other side of said means, a throttle valve having a fluid chamber and provided with separated inlet and outlet ports so positioned as to register with the inlet and outlet ports of the casing when said valve is in an open position, all of said ports being in covered relation when the valve is in a closed position, resilient means to normally hold said valve in its closed position, a trigger having a heel for moving said valve toward its open position, and adjustable means carried by the valve to take up the wear between itself and the heel of the trigger and to regulate the lap of the ports, said means, one end of the valve and the valve casing being slotted to register with a portion of the trigger to align the valve ports with the casing ports and prevent rotation of said valve.

1,482,212. ELECTROMAGNETIC IGNITION SWITCH FOR INTERNAL-COMBUSTION ENGINES. MARIUS JEAN BAPTISTE BARBAROU, Neuilly-sur-Seine, France. Filed Aug. 20, 1920. Serial No. 404,856. 1 Claim. (Cl. 200—104.)



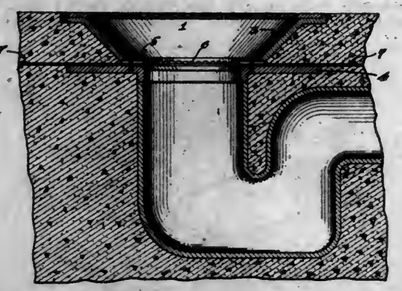
An ignition electromagnetic switch comprising a casing, an energising coil therein, a spring controlled core slidable axially through said coil and provided at one end with an insulating member, a rocker adapted to be operated by said insulating member, said rocker having a rounded end, parallel contact blades separate from each other on said rocker, one of said blades extending over said rounded end, a fixed contact member with which said contact blades are adapted to alternately contact, a returning coiled spring adapted to convey an electric current to one contact blade, and a spring blade in constant contact with the rounded part of the other contact blade and adapted to convey an electric current to the same.

1,482,213. ADDRESSING MACHINE OR LIKE PRINTING MACHINE. LOUIS MAURICE BARMAN, London, England. Filed Aug. 21, 1922. Serial No. 583,422. 6 Claims. (Cl. 101—49.)



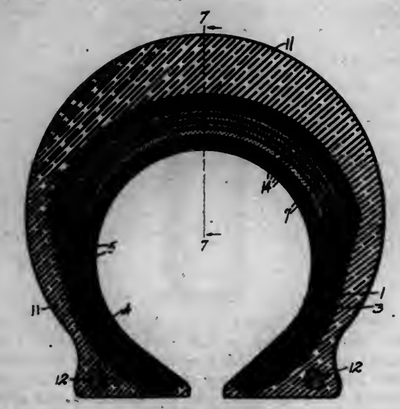
1. In addressing or like printing machines the use and employment of mechanism whereby at the will of the operator the mechanism operates to remove the pile of stencils from the path of the reciprocating pusher member.

1,482,214. LOCK DEVICE FOR SHADE ROLLERS. EDWARD J. BARRETT, New York, N. Y. Filed Nov. 23, 1920. Serial No. 425,976. Renewed July 2, 1923. 6 Claims. (Cl. 156—29.)



4. A lock device for the shank of shade rollers comprising a casing open at the top and bottom and provided with an aperture through which the shank of a shade roller is adapted to pass, a sheet metal plate mounted in connection with said casing and provided with an integral spring member located within said casing and extending through the lower end thereof to form a finger piece, a lock plate adapted to be mounted upon the shank of a shade roller and detachably mounted in said casing and in connection with which said spring member operates for holding said lock plate against accidental displacement in said casing, and means for guiding the movement of the lock plate in said casing.

1,482,215. COMBINATION THERMO BOTTLE. LOUIS BONDIETTI, New York, N. Y. Filed Oct. 26, 1922. Serial No. 597,036. 3 Claims. (Cl. 215—1.)

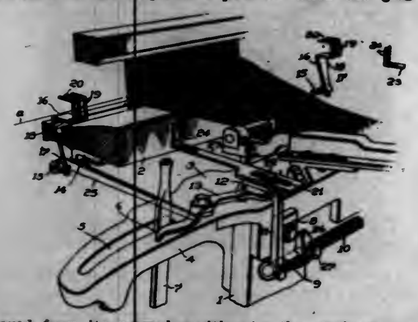


1. In a bottle, a removable base adapted to form a funnel for engagement with the mouth of the bottle.

1,482,216. SEEPAGE JOINT. EDWARD W. N. BOOSEY, Detroit, Mich. Filed Apr. 6, 1920. Serial No. 371,618. 6 Claims. (Cl. 285—37.)

1. In plumbing, a seepage joint between attached parts of plumbing elements comprising a flanged portion on the upper of said element adapted to be attached to another element, an apron or plate provided between the said elements and extending outwardly therefrom, the flange of the upper element being roughened or corrugatd on the lower face substantially as and for the purpose described.

1,482,217. TIRE STRUCTURE. AMEL B. BROLUSKA, Detroit, Mich. Filed Apr. 7, 1923. Serial No. 630,495. 7 Claims. (Cl. 152—18.)

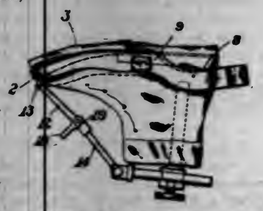


3. A tire structure comprising a series of cord or fabric strips extending diagonally across the tread of the tire and separately embedded in rubber, a second series of cord or fabric strips separately embedded in rubber and covering the joints between the strips of the first series, a third series of cord or fabric strips separately embedded in rubber and extending diagonally across the tread of the tire at an angle to the first and second series, a fourth series of cord or fabric strips separately embedded in rubber covering the joints between the strips of third series, a series of flexible puncture proof strips of a vulcanizable composition separately embedded in rubber and extending diagonally across the tread of the tire, a second series of flexible puncture proof strips covering the joints between the puncture proof strips of the first series and a rubber tread for the tire, the tire being vulcanized to allow yieldable movement of the strips in relation to each other.

1,482,218. FILLING-DETECTING MECHANISM. JOHN C. BROOKS, Paterson, N. J., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 20, 1922. Serial No. 595,723. 6 Claims. (Cl. 139—372.)

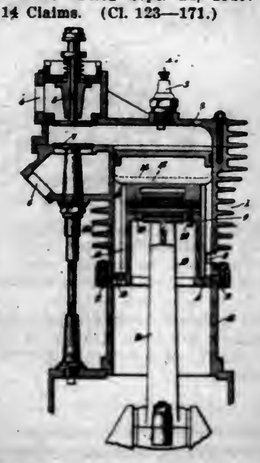
1. In a loom, the combination of the lay, a non-tilting weft fork extending rearwardly towards the lay, a mov-

able grid on the lay cooperating with the non-tilting weft fork for detecting the presence or absence of the weft or filling on a beat-up movement of the lay, an arm extending frontwardly from the grid and movable thereby from an operative to an inoperative position when the grid is



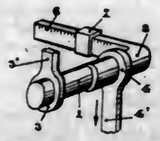
moved from its normal position by the stationary weft fork, a bunter adapted to be engaged by said arm when the arm fails to be moved to inoperative position as the lay beats up, and means for changing the operative condition of the loom when bunter is engaged by the arm on a detecting beat of the lay.

1,482,219. CONTAINER. LEWIS C. BROOKS, Milwaukee, Wis., assignor to The National Paper Can Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 25, 1921. Serial No. 517,506. 7 Claims. (Cl. 229—46.)



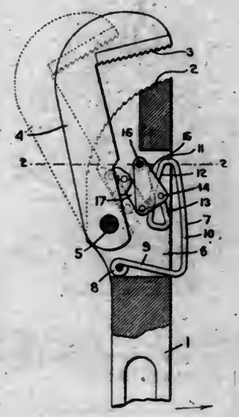
1. A container having a mouth, a closure for the mouth, string-retaining means for the exterior of the container, and a string for removably holding the closure in place passing over the top of the closure and engaging the string-retaining means on the container, said string being entirely exterior of the closure and container, substantially as described.

1,482,220. METHOD OF MAKING SHOES. ELI BROTHERS, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Sept. 14, 1912, Serial No. 720,380. Divided and this application filed May 27, 1916, Serial No. 100,366. Renewed Apr. 18, 1923. 15 Claims. (Cl. 12—145.)



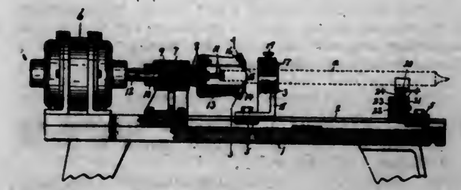
1. That improvement in methods of making shoes which consists in assembling an upper on a last; inserting the shoe within a portable lasting device which is constructed and arranged to embrace the forepart of the shoe and to adapt itself to and contact with substantially the entire periphery of the fore part; relatively turning the lasting device and the shoe to wipe the upper over the side and end faces of the forepart of the last to the edge of the last bottom; and subjecting the shoe, with the portable lasting device holding the upper in lasted position, to an upper and sole connecting operation.

1,482,221. EXPLOSION ENGINE. JOSEPH L. CATO, Elmhurst, N. Y. Filed Sept. 24, 1919. Serial No. 326,191. 14 Claims. (Cl. 123—171.)



1. An internal combustion engine having in a cylinder means for providing therein a current of air, comprising a stationary partition cooperating with an engine piston and fitting in a passageway located at one side of the piston.

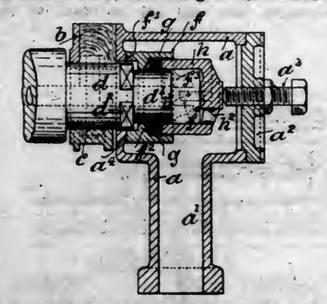
1,482,222. WEIGHING AND MEASURING APPARATUS. LOUIS DOMINIQUE JOSEPH ARMAND DUNOYER, Neuilly-sur-Seine, France, assignor to Société Anonyme des Forges et Ateliers de la Fournaise, St.-Denis, Seine, France. Filed Sept. 2, 1921. Serial No. 498,066. 3 Claims. (Cl. 285—49.)



1. An apparatus of the type adapted to be attached to a lifting device for measuring the value of weight or an effort, comprising a shaft having a pair of integral portions, whose axes are eccentrically arranged with respect to each other, a collar mounted on one of said shaft portions having an arm rigidly attached thereto and provided with means for suspending said apparatus from a lifting device, a second collar mounted on the other of said shaft portions having an arm rigidly attached thereto and provided with means for suspending a weight therefrom, a balance lever secured to said shaft, said arms, lever and the eccentricity of said shaft portions being constructed and arranged to cause said lever to normally assume a horizontal position when no load is placed upon the apparatus and to cause said lever to be rotated in an upward direction from said horizontal position proportionately to the load placed upon said apparatus, a cursor slidably mounted on said lever and means to cause said cursor to be automatically moved along said lever to return.

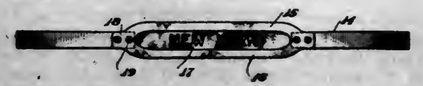
1,482,223. PIPE WRENCH. WILLIAM A. ELLISON, Salem, Mass., assignor to David F. Murphy, Salem, Mass. Filed Nov. 9, 1922. Serial No. 599,819. 2 Claims. (Cl. 81—99.)

1. In a pipe wrench, the combination with a handle member having a fixed jaw at one end, of a movable jaw pivoted to the handle member, a link pivoted to the movable jaw between its pivotal point and the jaw portion thereof, a pivotally mounted radius member connected to the link, and a spring acting on the radius member and tending through the latter and link to swing the pivoted jaw toward the fixed jaw.



1,482,224. CANDLE LATHE. EVALD JULIUS ENGMAN, Syracuse, N. Y., assignor to Will & Baumer Candle Co., Inc., Syracuse, N. Y. Filed July 26, 1922. Serial No. 577,742. 1 Claim. (Cl. 142—1.)

A candle lathe comprising a supporting bed having lengthwise guides on one end, a motor mounted on the other end of the bed with its shaft extending lengthwise of the guides, a journal bearing mounted on the bed between the guides and motor, a tubular shaft journaled in said bearing coaxial with and having one end secured to the motor shaft, a cutter secured to the other end of the tubular shaft to rotate therewith, a stop adjustable coaxially of and within the tubular shaft, separate brackets adjustable lengthwise of and upon the bed guides toward and from the cutter, a tubular candle guide in one of the brackets coaxial with the tubular shaft, and a candle rest mounted in the other bracket and adjustable radially of the produced axis of the tubular shaft.



1,482,225. DOLL-HEAD BEARING AND PACKING DEVICE FOR DRYING CYLINDERS. WILLIAM PARSONAGE EVANS, Manchester, England. Filed Mar. 7, 1923. Serial No. 623,859. 7 Claims. (Cl. 285—10.)

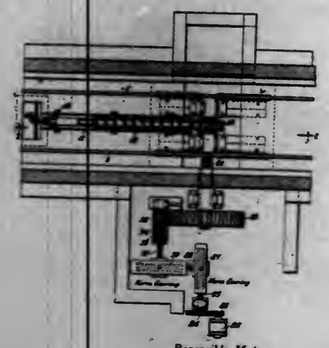
1. A doll-head bearing for drying cylinders, comprising a stand, a cylinder, a prepared neck on the cylinder, a gland element fitting the prepared neck on the cylinder, and driven therefrom, a second gland element driven from

the other gland element, packing material acted upon by the gland elements, and adjusting means acting upon a gland element to compress the packing.

1,482,226. BUMPER FOR AUTOMOBILES. ROLLIE B. FAGEOL, Oakland, Calif., assignor to American Chain Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed Jan. 31, 1923. Serial No. 616,073 2 Claims. (Cl. 293—55.)

1. A bumper for automobiles comprising a pair of flat resilient loop end horns having forward portions terminating in the same horizontal plane, the ends of said portions being spaced apart a distance substantially equal to a car frame upon which the bumper is mounted, and an increased impact area plate interposed between and connecting the forward terminating ends of said horns, said plate being pressed from a single piece of metal to form a substantially elliptical frame of channel section, the inner edges of said frame sections being integrally united by a web.

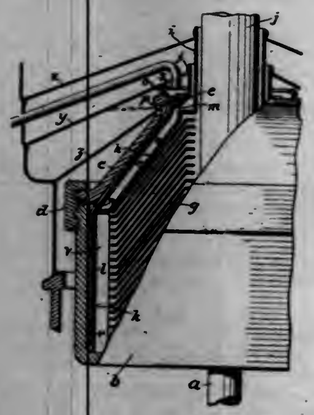
1,482,227. HEAT-TRANSFERRING APPARATUS AND METHOD. CROSBY FIELD, Yonkers, N. Y. Filed May 16, 1921. Serial No. 469,799. 7 Claims. (Cl. 62—172.)



6. The method of recovering solids from fluids by heat transference which consists in contacting a heat conducting medium with one side of a flexible heat transferring wall and contacting the fluid to be treated against the opposite side of said wall whereby the fluid is solidified in the form of a film upon the surface of the wall by heat transference, and creating differences in pressure of the fluid being treated and of the heat conducting fluid to thereby cause a flexure of said wall and effect a separation of the film of solid therefrom.

1,482,228. CAR-PUSHING APPARATUS FOR TUNNEL KILNS. WILLIAM LEE HANLEY, Jr., Bradford, Pa. Filed Apr. 17, 1923. Serial No. 632,763. 15 Claims. (Cl. 104—172.)

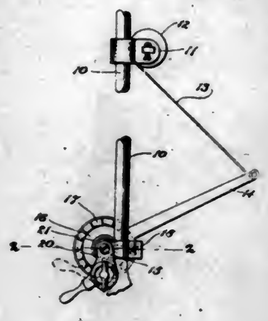
1. In a car pushing apparatus for tunnel kilns, the combination of a horizontally disposed sprocket chain, means for moving said chain longitudinally in both



directions, a pushing member having a pivotal connection with said chain, and having a car engaging part movable vertically into and out of operative relation

Reversible Motor

with a car to be pushed, and means for engaging the movable pushing member for elevating said car engaging part into and holding it in operative position.



1,482,229. MACHINE FOR SEPARATING SOLIDS FROM LIQUIDS. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 25, 1922. Serial No. 546,810. 13 Claims. (Cl. 233—11.)

3. The combination with a centrifugal bowl comprising a shell and a removable top, of a heat radiator extending around the inside of the bowl and removable, with the top, from the bowl.

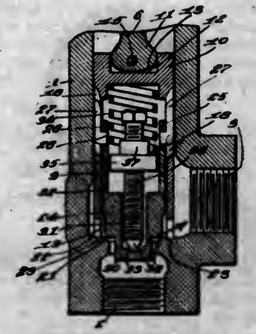
1,482,230. ADJUSTABLE SUNSHADE AND STORM CURTAIN FOR WINDSHIELDS. GEORGE HARROLD, Los Angeles, Calif. Filed Nov. 18, 1921. Serial No. 516,081. 2 Claims. (Cl. 296—95.)

1. The combination with a windshield frame, of brackets adjustably arranged upon the side members of said frame, a shaft journaled in said brackets, curtain supporting arm carried by said shaft, a toothed disk carried by one of said arms, ratchet teeth formed on said disk, a spring-pressed pin arranged for operation in one of said brackets and adapted to engage said ratchet teeth for retaining the rod and the curtain supporting arms

in adjusted positions, a cam adapted to be rotated to move said pin, and means for positively locking the other bracket to the windshield frame.

1,482,231. APPARATUS AND METHOD OF TESTING SILK THREADS. ALBERT AUGUST HASLER, Hazleton, Pa., assignor to Duplan Silk Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 19, 1922. Serial No. 530,266. 18 Claims. (Cl. 70—51.)

1. The method of testing a silk thread which consists in placing the thread under a predetermined tension and subjecting opposite sides of the thread while under tension to a reciprocating scraping action.

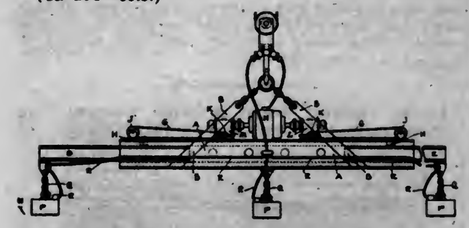


1,482,232. GAME BALL. ROBERT H. HAZELTINE, New York, N. Y. Filed Feb. 6, 1920. Serial No. 356,582. 6 Claims. (Cl. 46—4.)

1. A golf ball comprising a resilient core, an outer shell, and a plurality of independent spaced members differing in resiliency from the material of the shell and penetrating said shell.

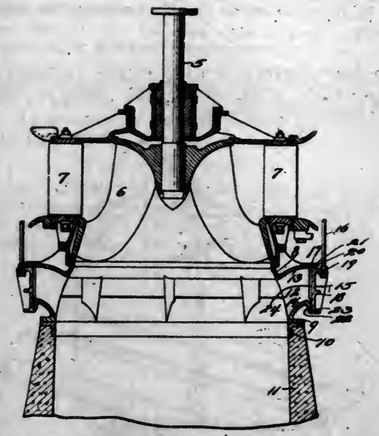
1,482,233. COMBINED SAFETY AND SHUT-OFF VALVE. EDWIN P. HEWITT, Spokane, Wash.; Nellie Hewitt administratrix of said Edwin P. Hewitt, deceased. Filed Mar. 31, 1921. Serial No. 457,326. 24 Claims. (Cl. 251—3.)

3. In a combined safety and shut-off valve, a valve body having a valve seat and an area surrounding said seat, a sleeve for engagement with said area and having an opening for escape of pressure fluid through said sleeve, a valve closure in said sleeve, a spring acting to project said closure beyond the edge of said sleeve when



the sleeve is spaced from said area, means for limiting projection of said closure, and means for seating said closure and sleeve consecutively.

1,482,234. STARTING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. FRITZ HÜTTNER, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed May 13, 1922. Serial No. 560,830. 6 Claims. (Cl. 60—16.)



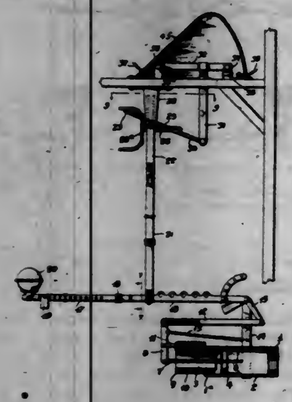
1. The combination with an internal combustion engine in which compressed air is used for starting, of a receiver for scavenging air connected with the cylinder, whereby the starting air can expand into said receiver, and means for shutting off the exhaust pipe during the starting period.

1,482,235. ELECTROMAGNETIC APPLIANCE FOR HANDLING PLATES, RAILS, BARS, AND THE LIKE. JOSEPH JEFFREY INGLIS, Motherwell, Scotland. Filed May 17, 1921. Serial No. 470,463. 2 Claims. (Cl. 294—65.5.)

1. An electromagnetic appliance for handling plates, rails, bars and the like, comprising a rigid central housing, laterally extensible beams telescopically carried in said housing, means for extending and retracting said beams with respect to the housing, and electromagnetic lifting devices suspended from the housing and from the extensible beams, substantially as described.

1,482,236. HYDRAULIC TURBINE. GEORGE A. JESSOP, York, Pa., assignor to S. Morgan Smith Company, York, Pa., a Corporation of Pennsylvania. Filed Nov. 29, 1922. Serial No. 604,068. 16 Claims. (Cl. 253—17.)

1. A hydraulic turbine having a runner, controllable means for admitting water to the runner, a draft tube into which the runner discharges, an inlet organization having upper and lower walls associated with the draft tube below the runner and turbine structure for admitting auxiliary water into and increasing the suction on the draft tube and the head on the runner, the inner termination of the inlet sloping outwardly and downwardly to the upper extremity of the draft tube without projecting into the latter, and vertically movable means applied to the outer open portion of said inlet organization and adapted to engage and be limited in movement by contact with the outer terminals of the inlet walls and operable to control the entrance of water into the inlet organization and the draft tube, the one inlet organization wall having an outer flaring terminal and the inner termination of the inlet organization being always open to the draft tube.



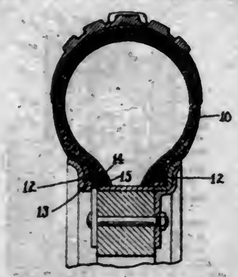
1,482,237. COMBINED TIRE TEST GAUGE AND VALVE. WILMAR F. LENT, New Haven, Conn., assignor to The Greist Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Dec. 7, 1922. Serial No. 605,426. 6 Claims. (Cl. 152—11.5.)

1. In a device of the class described, the combination of a cylindrical member for attachment to a tire valve nipple, a second cylindrical member telescopically engag-

ing the first-named member and provided with a vave, a pressure gauge carried by said second-named member, the parts being so arranged that the second member may be moved over the first member for unseating the usual tire valve and opening the valve of the first-named member to place the gauge in air communication with the tire.

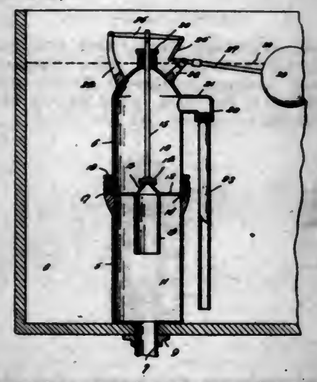
1,482,238. AUTOMATIC MINE PUMP. CHESTER LEWIS, Hazard, Ky. Filed Dec. 30, 1922. Serial No. 609,974. 6 Claims. (Cl. 103—12.)

1. In a mine pumping device in combination a suction pipe having communication with a water hole, a check valve located within said pipe, a pump also communicating with said pipe and adapted to initiate the flow of water therein and common means operated in accordance with the amount of water in the hole for regulating the operation of the pump and said suction valve.



1,482,239. WHEEL. JOSEPH LEY, Portland, Oreg. Filed Mar. 23, 1923. Serial No. 626,999. 3 Claims. (Cl. 301—63).

3. A vehicle wheel provided with a hub provided with a flange and a removable collar, three discs confined on said hub between said flange and said collar, a filler ring interposed between two of said discs, said wheel being also provided with a felloe to which two of said discs are attached, the third disc having its periphery attached to one of the other discs.

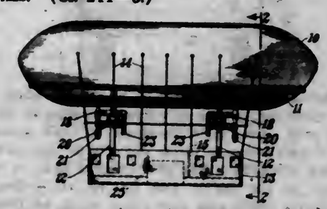


1,482,240. TIRE BEAD. MELVON A. MARQUETTE, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Feb. 21, 1920. Serial No. 360,312. 1 Claim. (Cl. 152—13.)

A tire casing having in each of the base edges thereof a triangular bead member consisting of an inextensible anchoring means located closely adjacent to the bottom and outer corner of the triangular member, a slightly extensible anchoring means located closely adjacent to the bottom of the triangular member and extending from said first anchoring means to the inner corner of the triangular member, and a flexible filler means extending from the top of said anchoring means to the top corner of the triangular member, said casing having inner plies of fabric

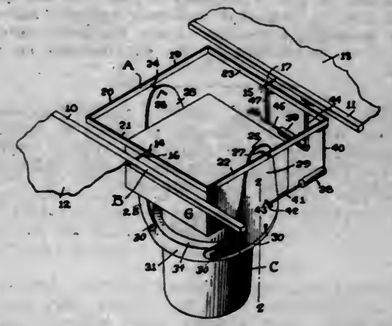
anchored principally by the inner corners and outer plies anchored principally by the outer corners of said triangular members.

1,482,241. FLOAT VALVE. CHARLES MEIGHAN, Tarboro, N. C. Filed Dec. 7, 1923. Serial No. 679,149. 2 Claims. (Cl. 137—104.)



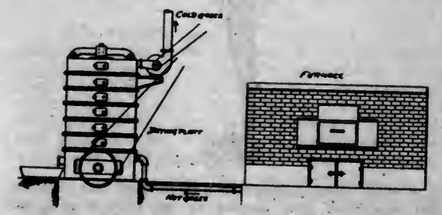
2. A float valve comprising a lower casing enlarged at its upper end to provide an internal annular shoulder, a disc resting upon said shoulder and provided with a central fork surrounded by a valve seat member, an upper casing section having an outwardly directed flange upon its lower end resting upon the margin of the disc, a gland threaded into the enlarged upper end of the lower casing section and clamping the lower end of the upper casing section, and a disc upon the shoulder of the lower casing section, said disc having a rigid central tube co-axial with the valve seat member of the disc and projecting downwardly into the lower casing section, the upper casing section being provided with a lateral outlet between its ends, and a float operated valve member operating in the upper section of the casing above the valve seat member for opening and closing the latter.

1,482,242. COMB. SAMUEL MICHAUD, Roseburg, Oreg. Filed Feb. 16, 1923. Serial No. 619,473. 3 Claims. (Cl. 132—16.)



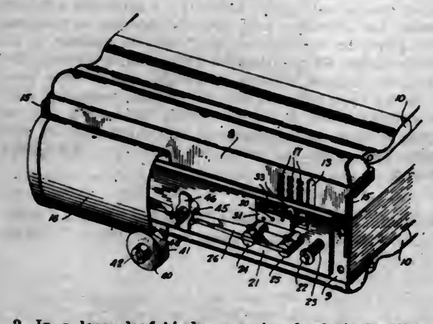
1. A comb comprising a holder having a pair of spaced parallel side strips and transverse strips connecting the side strips together at their upper edges and at the opposite ends thereof, a pair of end teeth having head portions received between said side strips at opposite ends of the holder with the upper ends of said end teeth engaging the under sides of said transverse strips, a plurality of intermediate teeth having head portions received between said side strips and arranged in series between said end teeth, a cover clampingly receiving said holder, and ends integral with the side strips and in frictional contact with the remote walls of the heads of said end teeth.

1,482,243. FLYING MACHINE. JAIME MONTELLS, New York, N. Y. Filed Oct. 18, 1922. Serial No. 595,272. 5 Claims. (Cl. 244—6.)



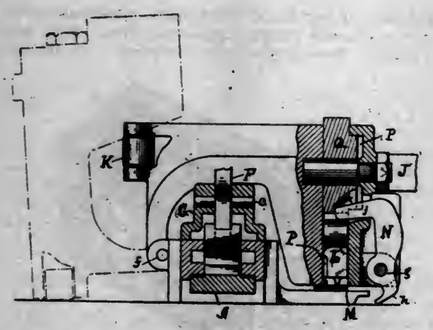
1. In a flying machine, a gas bag, a cabin suspended therefrom, lifting and driving propellers, turbine wheels fixed to the various propellers, means for directing a fluid under pressure on the turbine wheels, and a valve for controlling the said fluid and adapted to inversely vary the supply of fluid to the two sets of propellers.

1,482,244. AIRPLANE-CAMERA SUSPENSION. EDMUND R. MORTON, New York, N. Y. Filed Dec. 4, 1920, Serial No. 428,396. Renewed June 26, 1923. 17 Claims. (Cl. 95—125.)



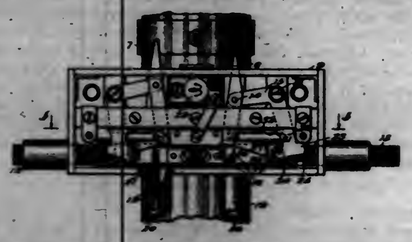
12. In a camera mounting, pendular supporting means providing resilient support for the camera.

1,482,245. METHOD OF PANIFICATION. LUIGI NEGRO, Bucharest, Rumania. Filed Dec. 11, 1920. Serial No. 430,008. 1 Claim. (Cl. 99—10.)



A method of panification in which the whole wheat is directly used which consists in subjecting the wheat grains after they have been washed and cleaned in the usual manner to a gradual drying until nearly all the water content has been expelled, then exposing the grains for about 30 minutes to a temperature of 100° C. (212° F.) while at the same time subjecting the grains to a ventilating current of heated air, while regulating the temperature of the air to avoid jumps of temperature, and to secure a progressive uniform increment of the temperature and thereby eliminate the diastases while keeping intact the good qualities of the mineral substances and of the gluten contained in the grains; then subjecting the wheat to a maceration in water to soften the grains; and finally subjecting the wheat to a cutting and kneading process after which the treatment is the same as that used when employing white flours.

1,482,246. LOOSE-LEAF BINDER. WILLIAM E. NIME and MAX RUMPF, Chicago, Ill., assignors to Edward W. Hill, Chicago, Ill. Filed Dec. 1, 1921. Serial No. 519,078. 9 Claims. (Cl. 129—8.)

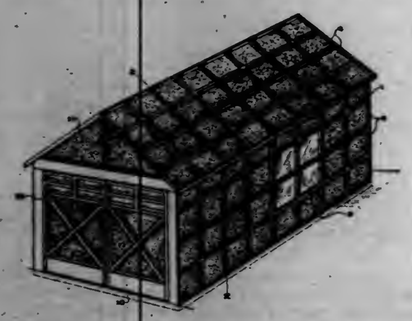


2. In a loose leaf binder, a pair of relatively slidable back plates, means for guiding said plates in relation to each other, locking lugs carried by one of said plates, the other of said plates having coacting locking recesses, coil springs mounted above and coacting with said locking lugs for urging the latter in one direction, and means for moving said locking lugs to cause the latter to be disengaged from the coacting locking recesses.

1,482,247. COMBINATION STRETCHING AND SEALING MACHINE. BENONI NOWLAND, Englewood, N. J., assignor to Twisted Wire and Steel Company, New York, N. Y. Filed Dec. 1, 1921. Serial No. 519,272. 1 Claim. (Cl. 100—15.)

A combination stretching and sealing machine which comprises a base plate having a toothed rack mounted thereon, and provided with suitable gripping devices;—means whereby said rack is operated to alter the distance between said gripping devices as desired,—and a sealing tool remaining normally out of action but adapted to be revolubly swung into position to perform the desired sealing operation.

1,482,248. SWITCH FOR AUTO TURNING SIGNALS. ARTHUR F. OCHTMAN, Coscob, Conn. Filed Mar. 11, 1922. Serial No. 542,867. 2 Claims. (Cl. 200—59.)



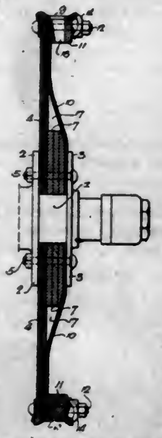
1. A switch mechanism for signal devices for automobiles comprising a pair of contact plates, a movable member for causing said plates to engage, a manually actuated member for actuating said movable member, a resetting lever pivotally mounted on said movable member, a retractile spring for resiliently holding said re-setting lever in a given position, a catch for locking the movable member in its operated position, and means connected with the steering wheel of the automobile for moving said resetting lever so as to disconnect said catch whereby said spring will cause the parts to move to a disengaged position.

1,482,249. KEY. ANTONIO PAGLIUCO, Natick, Mass. Filed Feb. 21, 1923. Serial No. 620,380. 3 Claims. (Cl. 70—9.)

2. A key of the class described comprising a shank having a transverse opening, a bit pivoted within the opening, a slide connected with the bit, a stem projecting from the slide provided with a finger piece spaced from the outer surface of the shank, and a guard sleeve embracing the shank and normally covering the bit receiving opening, said guard sleeve having a longitudinally extending slot provided with a flaring end for the reception of the stem of the finger piece as the guard is retracted.

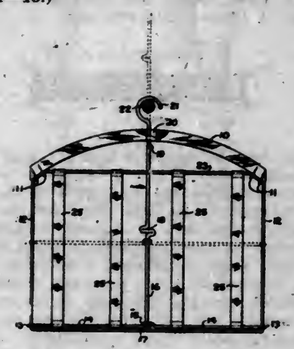
1,482,250. PORTABLE-BUILDING CONSTRUCTION. DANIEL ERNEST PARSONS, Knoxville, Tenn. Filed Sept. 15, 1922. Serial No. 588,300. 3 Claims. (Cl. 189—2.)

1. A portable building comprising walls and a roof, each wall and the roof embracing a plurality of sections placed edge to edge and clamped together in said relations and each embodying a frame, cross pieces within the frame intersecting each other at right angles at the center of the frame and having their ends opposed and secured to the respective bars of said frame, a plate on the inner side of the frame, and a weather proofing composition in the spaces defined by said cross pieces and bars on the outer side of the frame.



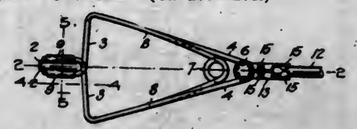
1,482,251. JUICE PRESS. WLADYSLAW PEKALA, Verona, N. Y. Filed Mar. 15, 1923. Serial No. 625,259. 4 Claims. (Cl. 100—44.)

1. A press comprising a base, a presser plate having slots in each end, a pair of screws adapted to be swung into the said slots, nuts threaded on said screws, one of said screws being pivoted directly to the said base, and a link pivoted at one end to said base on an axis transverse to the latter and having the other screw pivoted to its other end said plate being adapted to be clamped at certain times to the said screw to swing on the said link.



4. A press comprising a base, a presser plate having slots in each end, a pair of screws adapted to be swung into the said slots, nuts threaded on said screws, one of said screws being pivoted directly to the said base, and a link pivoted at one end to said base on an axis transverse to the latter and having the other screw pivoted to its other end, and means for locking said screw in two vertical varied positions, said means comprising a screw passed through the base and adapted to pass either through an opening in said link or behind the latter, the slot in the plate in which the last mentioned screw is adapted to pass being undercut, and the screw presenting a shoulder against which the plate is adapted to be clamped by the nut threaded on the screw.

1,482,252. WOOD DISK WHEEL. JOSEPH PELLKOFER, Clifton Heights, Pa., assignor to George W. Smith & Company, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 17, 1922. Serial No. 553,362. 4 Claims. (Cl. 301—63.)



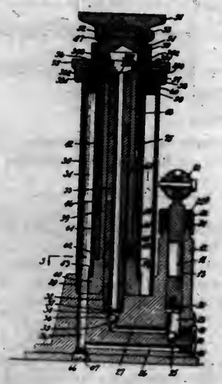
3. A disk wheel comprising a laminated hub element, a flat laminated disk secured to one face of said hub element and extending beyond the periphery of the latter, a laminated curved disk secured to the other face of said hub element and to the face of said flat disk, and a circular band secured at the peripheral edge of the curved disk and constituting the felly band of the wheel.

1,482,253. GARMENT SUPPORTING AND DISPLAYING DEVICE. CLARENCE D. PERRINE, Cleveland, Ohio. Filed Apr. 12, 1918. Serial No. 228,101. 6 Claims. (Cl. 211—13.)

1. In a garment-supporting device, in combination, a plurality of relatively movable supporting members mounted to form a collapsible supporting frame for the upper portion of a garment, and a device by which said frame is suspended adapted to turn relatively thereto and lock said members in position by its turning movement.

1,482,254. ELECTRICAL CONNECTER. FREDERICK D. PILLE, Denver, Colo. Filed Apr. 5, 1919. Serial No. 287,863. 6 Claims. (Cl. 173—273.)

3. An electrical connecter composed of a continuous piece of doubled wire the middle portion of which is looped to provide a spring and which is bent to form convergent legs at opposite sides of the loop, members extending along said legs and joined at one of their ends, jaws composed of the portions of the wire between said legs and said members, a bolt connecting the joined ends of the legs, and a fastening for a conductor of electricity connected to the bolt.



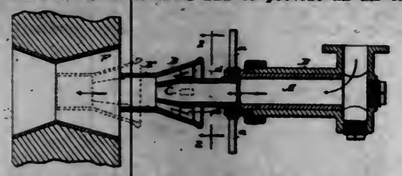
1,482,255. SPINNING RING. EDWARD W. POWERS, Boston, Mass., assignor, by mesne assignments, to Benjamin Farnham Smith, Concord, Mass. Filed June 3, 1921, Serial No. 474,619. Renewed July 14, 1923. 11 Claims. (Cl. 118—59.)

1. In a spinning ring, the combination with a base member adapted to be attached to the ring rail of a spinning frame, of an upper member having its lower edge telescoped over and frictionally engaging a portion of the base member, a self-lubricating lining member confined between the base member and the upper member and provided with a traveller-receiving recess and an annular traveller situated in said recess.

1,482,256. TELESCOPIC HYDRAULIC JACK. GUSTAV PRALL, New York, N. Y. Filed Dec. 29, 1922. Serial No. 609,559. 6 Claims. (Cl. 138—9.)

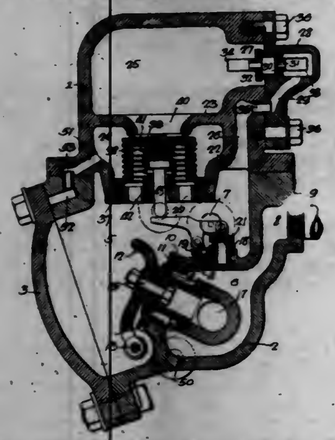
1. A portable hydraulic jack comprising a base, an outer jacket and an inner guide tube concentrically mounted upon said base and spaced to provide a fluid reservoir, a plunger slidably mounted upon said guide tube and surrounded by said outer jack, said plunger comprising an upper element and a lower element consisting of a pair of interconnected cylindrical hollow members arranged in spaced concentric parallel alignment, said upper element consisting of a hollow cylindrical member, slidably and telescopically mounted in the space between the members of said lower element, and provided at its outer end with a pressure head and means to force the fluid from said reservoir against said pressure head.

1,482,257. SASH RAISING AND FASTENING MECHANISM. ARTHUR DANIEL RAWLINGS and ERNEST JOHN RAWLINGS, London, England. Filed May 19, 1922. Serial No. 562,073. 6 Claims. (Cl. 292—194.)



1. In a device of the class described in combination a sash, an automatic raising mechanism therefor, and locking devices for said sash comprising sash engaging means and manually operable multiple ratio devices for operating the same to engage or disengage the sash.

1,482,258. GAS BURNER. RAYMOND S. REED, Syracuse, N. Y., assignor to Semet-Solvay Company, Solvay, N. Y., a Corporation of New York. Filed Apr. 1, 1922. Serial No. 548,567. 1 Claim. (Cl. 158—99.)



A gas burner comprising in combination a slidably mounted delivery gas pipe having a tapered gas outlet, a tapered hood carried by the gas pipe and surrounding said outlet and provided with rearwardly opening air inlets, whereby air is drawn in and mixed with the gas at the gas outlet, a mixing chamber of uniform cross sectional area carried by the hood and located in front

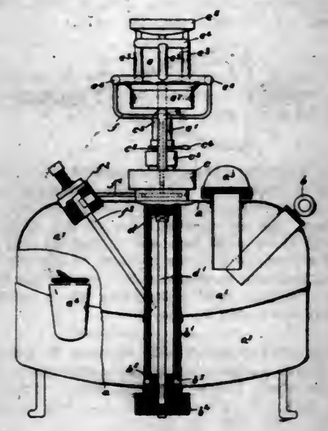
of the gas outlet, and a burner port having a portion thereof adapted to receive the mixing chamber when the same is moved forward and to provide an air inlet

thereby and formed with a decreasing cross sectional area to the point of furthest advancement of the mixing chamber.

1,482,259. ACCELERATOR FOR DRY-PIPE VALVES. ARTHUR C. ROWLEY, Philadelphia, Pa., assignor to Globe Automatic Sprinkler Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 26, 1923. Serial No. 634,899. 12 Claims. (Cl. 169—20.)

1. The combination in an accelerator for a dry pipe valve of a casing having two chambers respectively for connection with the air containing portion of a fire extinguishing system and with the intermediate chamber of a dry pipe valve; main and relay valves normally cutting off communication between said chambers; and a pressure controlled diaphragm connected to cause opening of the relay valve when the pressure is suddenly reduced in said fire extinguishing system.

1,482,260. AUTOMATIC SPRINKLER. ARTHUR C. ROWLEY, Philadelphia, Pa., assignor to Globe Automatic Sprinkler Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 26, 1923. Serial No. 634,901. 11 Claims. (Cl. 169—39.)

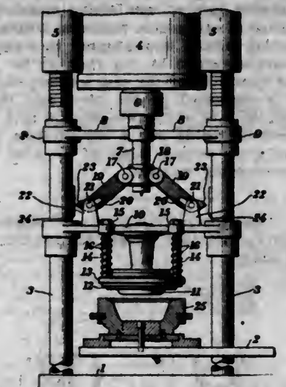


1. A fusible link comprising two plates; a key extending through said plates; a controlling element mounted between the plates to normally prevent movement of the key; and fusible material binding together said plates, key, and controlling element.

1,482,261. HAT ADJUSTER AND RETAINER. JACOB RUBENSTEIN, New York, N. Y., assignor to Hold Tight Hat Adjuster, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 28, 1923. Serial No. 635,266. 1 Claim. (Cl. 132—58.)

A device for holding on a woman's hat comprising in combination with a hat, a relatively wide elastic strip extending across the head space in the hat in a position forward of its rear end, metallic stiffening devices adjacent the ends of the strip gripping the latter throughout its width to prevent twisting of the same and providing loops at the ends of the strip, said loops extending transversely of the strip, and fastening means for detachably securing the strip within the hat extending through said loops transversely of the strip, said fastening means being substantially confined to the longitudinal plane of said strip and having guarded hat piercing portions.

1,482,262. LIQUID-FUEL BURNER. EDWARD J. Y. RUTHERFORD, London, England, assignor to New System Oil Burners Limited, London, England. Filed Apr. 20, 1922. Serial No. 555,778. 9 Claims. (Cl. 158—73.)

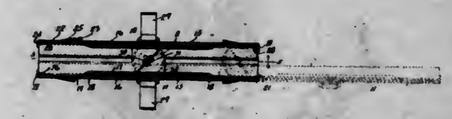


3. A liquid fuel burner, comprising a nozzle, a fuel jet arranged axially within said nozzle, said jet being displaceable relatively to said nozzle and regulating the opening therethrough, and a flash generator adapted to be heated by the burner, said generator including coaxially disposed annular tubes, symmetrically disposed connections between successive pairs of said tubes, connections to one of said annular tubes from a water supply, and connections from another of said annular tubes to said nozzle around said jet.

1,482,263. GLASS-PRESSING MECHANISM. JESSE M. SAID, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Feb. 7, 1923. Serial No. 617,565. 4 Claims. (Cl. 49—35.)

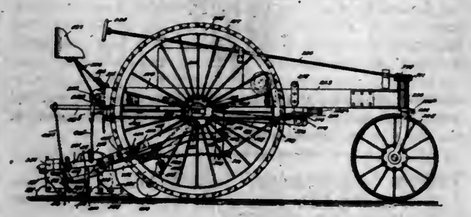
4. In a glass pressing mechanism having a fluid operated piston-rod for actuating the press plunger, the combination with a plunger cross-head slidably

mounted on vertical standards that are provided with notches, of means connecting the piston-rod and cross-



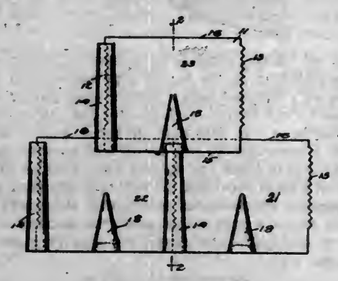
head and adapted to engage said notches upon the descent of the piston-rod and thereby exert an increase in pressure against the cross-head.

1,482,264. STENCIL HOLDER. GEORGE SAMEROTTI, Newark, N. J. Filed Jan. 4, 1923. Serial No. 610,591. 3 Claims. (Cl. 101—127.)



1. A stencil holder comprising a frame having a flange around its inner edge and having spiral springs stretched across the ends of the frame to hold a stencil against the flanges and to permit a slight rolling for easy insertion and removal of the stencil.

1,482,265. SHARPENER FOR SAFETY-RAZOR BLADES. JOHN M. SCHILTZ, Fort Worth, Tex. Filed Nov. 25, 1921, Serial No. 517,627. Renewed Dec. 7, 1923. 5 Claims. (Cl. 51—65.)

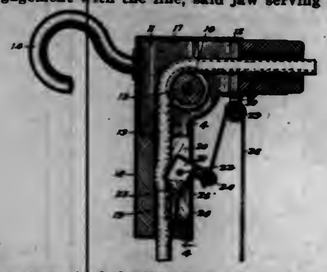


1. A stropping device for safety razor blades comprising a pair of supporting members having stropping elements in opposed relation, a connection between said members for maintaining the same in spaced parallel relation and for permitting of relative longitudinal sliding movements thereof, an oscillatory carriage removably positioned between said members, interengageable means on the carriage and on said supporting members for causing a reciprocable movement of the members in opposite directions upon manipulation of the device, means on the carriage for detachably associating a blade therewith, heads on the carriage engageable with the supporting members for limiting the oscillation of said carriage whereby to effect the forcible engagement of the sides of the cutting edges of the blade with the stropping faces, means at the opposite ends of the supporting members, and means on the carriage heads engageable therewith at the opposite end of each stroke of the device for oscillating the carriage.

1,482,266. MOTOR-DRIVEN AGRICULTURAL MACHINERY. FREDERICK L. SCHLEY and CLEMENS ERNST, Brooklyn, N. Y. Filed May 19, 1919. Serial No. 298,159. 14 Claims. (Cl. 97—47.)

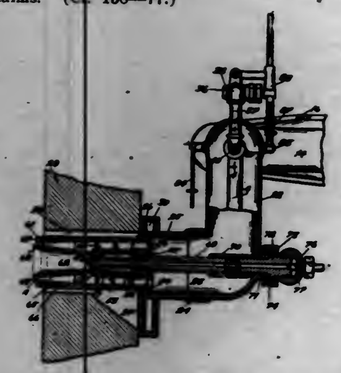
1. In a machine of the character described, a frame, a transverse axle having projecting wheel spindles at each side of said frame, and shaft extensions on said spindles, a pair of side wheels mounted on said spindles, a guide wheel, ground engaging implements disposed to the rear of said axle, a draft bar located on the outside of one of said wheels, and provided with an elongated slot engaging the end of one of said spindles said spindle, and a bar pivotally connected at one end of said slotted bar and at the other end to said ground engaging members.

1,482,267. ROOFING TILE. BERNHARD SCHNITZLER, New York, N. Y. Filed Oct. 31, 1922. Serial No. 598,165. 5 Claims. (Cl. 108—10.)



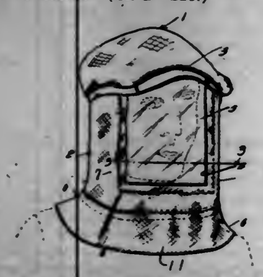
1. A roofing tile comprising a body having notches formed in one side, projections shaped to fit the tile notches formed on the other side, a strip formed integral with the body and extending beyond the notched edge, and a member formed in the center of the lower edge of the body for receiving an end of a strip formed integral with a tile.

1,482,268. CLOTHESLINE SUPPORT AND TIGHTENER. CHARLES SCHOPPE, New York, N. Y. Filed Feb. 2, 1922. Serial No. 533,689. 2 Claims. (Cl. 188—65.)



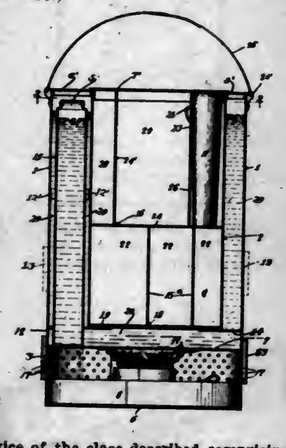
1. A clothesline supporting and tightening device comprising an angular tubular member including horizontal and vertical arms, a hook for attaching said member to a support, said hook being secured to said member at a point in axial alignment with the horizontal arm, a guide pulley mounted within said member at the juncture of said arms over which the end of the line is trained, a pivoted gripping jaw in the vertical arm having a cammed

serrated surface, and means for normally forcing said arm into engagement with the line, said jaw serving to permit



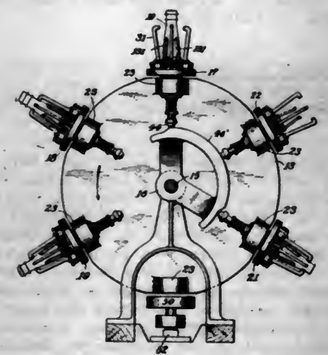
of free movement of the line in a direction to effect the tightening thereof and operating to prevent movement of the same in the opposite direction.

1,482,269. OIL BURNER. ISAAC M. SHARP, San Francisco, Calif. Filed Aug. 1, 1921. Serial No. 488,968. 22 Claims. (Cl. 158—77.)



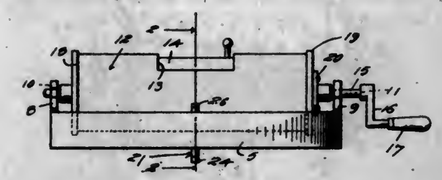
6. An oil burner, comprising a tubular burner supporting arm affording an air supply pipe mounted at one end to swing on a vertical axis, a burner shell projecting from the opposite end thereof and adapted for telescopic movement therein, a cup rotatably mounted within the shell, a spindle supporting the cup, an oil feed pipe for supplying oil to the cup through the spindle and extended exteriorly of said air supply pipe, said oil feed pipe affording a means for imparting simultaneous telescoping movement of said shell and cup as a unit within said arm, means for supplying oil to said pipe, and means for supplying air to said air supply pipe.

1,482,270. HEAD PROTECTOR. FREDRICK J. SHUSTER, Clifton Station, Va. Filed Oct. 26, 1921. Serial No. 510,639. 1 Claim. (Cl. 2—118.)



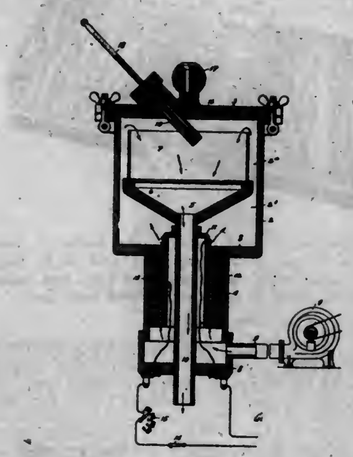
A head protector comprising a cap having a comparatively rigid visor projecting forwardly therefrom, a hood detachably connected to the inner side of the cap and having an opening in its upper front portion, a transparent panel secured at its side and bottom edges to said hood and closing said opening, reinforcing means attached to the upper edge of said panel, fastening means carried by the reinforcing means and adapted to cooperate with fastening means carried by the visor at the under side thereof and forwardly of the cap, whereby the weight of the panel is supported by the visor and the panel is spaced from the face of the wearer, and said hood being provided with fastening means spaced from its vertical edges whereby the vertical edges of the hood may be secured in overlapping relation.

1,482,271. DINNER PAIL. JAMES N. SIMMS, Chicago, Ill. Filed Apr. 25, 1921. Serial No. 464,312. 4 Claims. (Cl. 126—266.)



1. A device of the class described comprising a body, a heating chamber formed in the bottom of said body, pairs of supporting plates within said body and spaced above said heating chamber, one pair of said supporting plates having cut away portions to receive a liquid container and to laterally support the same, and a food container resting on said supporting plates.

1,482,272. APPARATUS FOR SEVERING VITREOUS ARTICLES. FRANCIS W. SMITH, Cranford, N. J., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Mar. 11, 1921. Serial No. 451,630. 7 Claims. (Cl. 49—14.)



5. A machine for severing portions of vitreous articles from the body portions thereof, comprising in combination, means for receiving and holding the vitreous article, means for inverting the article while so held, means for severing a portion of the article from the body portion thereof while held in inverted position, and means for releasing the article from said first mentioned means after the severing operation has been accomplished.

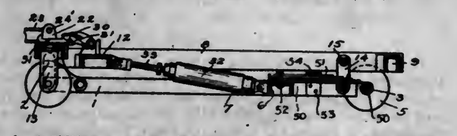
1,482,273. COFFEE ROASTER. WILLIAM SPARTIVENTO, Buffalo, N. Y. Filed Feb. 18, 1920. Serial No. 359,681. 1 Claim. (Cl. 34—5.)

A roasting apparatus including an endless frame for snug disposition in a lid opening of a stove in place of the lid and on the supporting means for the lid, said frame essentially consisting of an upstanding wall and open at top and bottom means on the frame to coact with the last mentioned means to secure the frame against vertical displacement having handle portions extending outwardly beyond the frame, the frame being adapted to extend a distance above the top of the stove, a container for the material to be roasted surrounded by said frame, a supporting shaft for said container, and ears integral with and rising in line with and from the frame removably journaling said shaft.

1,482,274. DRIER. GUILFORD L. SPENCER, Herricks, Me. Filed Sept. 28, 1922. Serial No. 591,144. 5 Claims. (Cl. 34—39.)

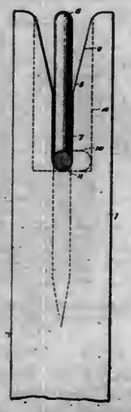
1. A drier, including a shell, a support therein for a capsule, a capsule on the support, said capsule having a foraminous bottom, an inlet and an outlet to the casing, a continuous air passage between said inlet and outlet and including two subdivisions having the side-wall of the capsule as a common wall separating the two subdivisions at their junction, the foraminous bottom of the capsule lying between said junction and the outlet, and means for increasing the temperature and pressure of air above the atmospheric and admitting such air to the passage subdivision between the inlet and the capsule sidewall.

1,482,275. RIVET HOLDER. EDWIN B. STIMPSON, Brooklyn, N. Y., assignor to Edwin B. Stimpson Company, Brooklyn, N. Y. Filed June 7, 1922. Serial No. 566,624. 1 Claim. (Cl. 218—19.)



A one-piece rivet holder comprising a plate bent upon itself to provide a pair of arms whose free ends are biased to engage each other, one of the free ends extending beyond the other and being bifurcated, both of the arms being flat and each having on its surface a U-shaped ridge, with the cross-bar of the U located near the junction between the arms, and with the side members of the U extending in the general line of the arms forwardly towards the free ends of the arms.

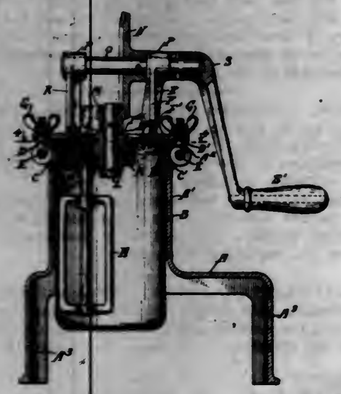
1,482,276. PROCESS OF RECOVERING VANADIUM. WILLIAM E. STOKES, Rockville Center, N. Y., assignor to United States Processes, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 8, 1921. Serial No. 443,415. 6 Claims. (Cl. 23—13.)



1. In a process of recovering vanadium, forming a cold water soluble vanadium compound relatively insoluble in hot water, leaching with cold water, and heating to precipitate the vanadium compound.

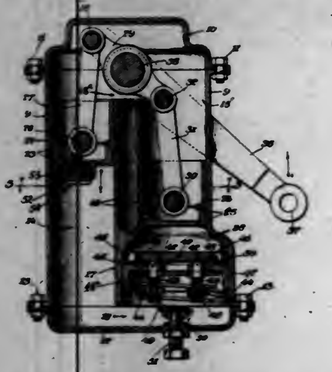
1,482,277. LIFTING TRUCK. WILLIAM STUBBING, Jr., Cincinnati, Ohio, assignor to The Stubbing Truck Company, a Corporation of Ohio. Filed Feb. 27, 1920. Serial No. 361,843. 7 Claims. (Cl. 254—10.)

1. A lifting truck including a substantially horizontally disposed base, a wheel supported axle arranged beyond one end of said base and in substantially the same plane as the base, a spring having one of its ends connected to said base and its other end connected to the axle, bearing means mounted on the base and bearing against an intermediate portion of said spring, a platform mounted on said base, and means for elevating said platform.



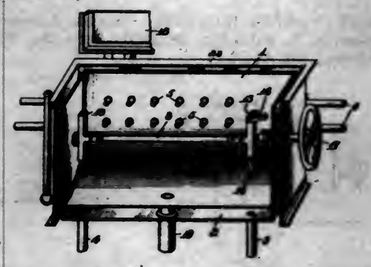
1,482,278. CLOTHESPOLE. BENJAMIN TRENT, Lakeview, N. J. Filed Mar. 14, 1922. Serial No. 543,683. 1 Claim. (Cl. 68—12.)

A clothes pole having a longitudinally extending socket in one end thereof, and slots in opposite sides thereof communicating with said socket, said slots extending to



the end of said pole and the side walls thereof diverging outwardly at the upper ends thereof and for a portion of their lengths, and a pin mounted in the pole and extending centrally from the inner end of said socket and in alignment with said slots.

1,482,279. MIXING AND BEATING MACHINE. HENRY TRUST, Park Ridge, N. J., and FRANK M. ASHLEY, Brooklyn, N. Y.; said Ashley assignor of his right to Josephine Trust, Park Ridge, N. J.; Josephine Trust administratrix of said Henry Trust, deceased. Filed Dec. 10, 1919. Serial No. 343,967. 9 Claims. (Cl. 259—102.)

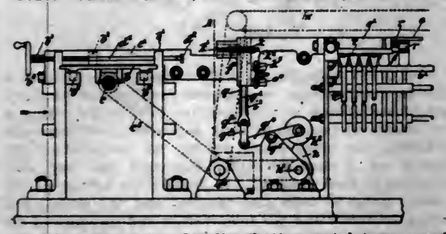


1. A machine comprising a base portion, a receptacle supported thereby, a frame mounted on said base portion, adapted to clamp said receptacle to said base portion and having a depending hub with gear teeth cast integral therewith, a casing, a spindle carried by said casing, a gear wheel connected to said spindle and meshing with said gear teeth on the hub and means by which said casing may be rotated.

1,482,280. AUTOMOBILE SHOCK ABSORBER. EDGAR H. WHEELER, Franklin, N. H., assignor of one-half to Edwin G. Morey, Windsor, Vt. Filed Feb. 1, 1923. Serial No. 616,260. 21 Claims. (Cl. 188—88.)

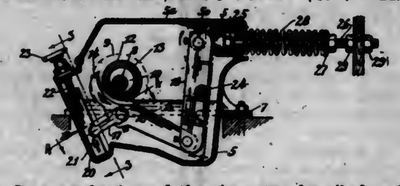
1. In a shock absorber the combination of a casing having a pair of fluid containing cylinders, a pair of pistons operating therein, each piston acting at one stroke thereof to force fluid from its cylinder into the other cylinder, and a pair of valve means for resisting such action.

1,482,281. DISINFECTION APPARATUS, PARTICULARLY FOR SPUTUM CUPS. JAN LAMBERT CORNELIS WORTMAN and AART VISSER, Amsterdam, Netherlands, assignors to Nederlandsche Fabriek van Bronswerken voorheen Becht & Dyserinck, Amsterdam, Netherlands. Filed July 5, 1923. Serial No. 649,752. 2 Claims. (Cl. 141—1.)



1. Disinfection-apparatus more particularly for sputum-cups, comprising a container having a double bottom, a series of atomizers in the wall of the container, a liquid reservoir, liquid conduits in communication with the atomizers and with the liquid reservoir, steam and condensing conduits in communication with the double bottom of the container and with the reservoir for raising the temperature of the liquid contents of the container and reservoir, a rotary axle mounted in the container, and portable frames for carrying the cups and supporting same upon said axle.

1,482,282. BELT-FASTENING HOOK. MORTON L. ADAMS, Anchorage, Territory of Alaska. Filed Apr. 14, 1922. Serial No. 552,689. 6 Claims. (Cl. 24—33.)



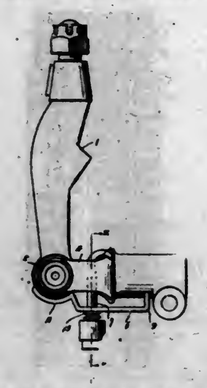
2. Belt fastening means comprising a series of hooks of which each has confronting long and short tangs adapted to pass when forced into the belt, and means connecting the hooks to make an integral hook body.

1,482,283. AUTOMATIC METAL-TYPE-DISTRIBUTING MACHINE. THOMAS ATKINSON and HORACE CARDWELL DAY, Heywood, England. Filed Aug. 31, 1922. Serial No. 585,387. 6 Claims. (Cl. 276—26.)

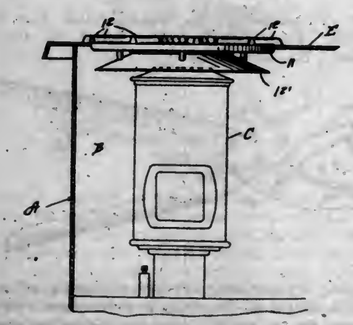
1. In an apparatus for distributing metal type, a galley to receive the page of type to be distributed, a sliding base for such galley, means to clamp the type upon such galley base, and means to actuate the galley base to bring the type a line at a time opposite to a type channel, a receiver at the end of such type channel, means to carry the type suspended in such receiver, means to feed the type a line at a time into such type channel and receiver substantially as described.

1,482,284. OPERATING MECHANISM FOR CONCENTRATING TABLES AND THE LIKE. JAMES HOWARD CARNEY and WILLIAM A. BUTCHART, Denver, Colo.; said Carney assignor to said Butchart. Filed Nov. 4, 1922. Serial No. 599,121. 5 Claims. (Cl. 74—14.)

1. In a mechanism of the character described, a hollow frame closed at its bottom to provide an oil reservoir, a toggle in said reservoir below a determinate liquid level, including a floating member having an upturned working face, a rocker-lever connected with said member below its fulcrum, an abutment for the toggle, a movement transmitting element, a pivotal connection between said element and the upper end of the lever above said liquid level, the lever having means which by its rocking motion, causes the lubricant in the reservoir to be forced upwardly so as to lubricate the said connection, and an eccentric rotatably supported on the frame above and in contact with the working face of the floating toggle member.



1,482,285. TAG PACKAGE. HARRY AUGUSTUS CHANDLER, Framingham, Mass., assignor to Dennison Manufacturing Co., Framingham, Mass., a Corporation of Massachusetts. Filed Oc. 27, 1922. Serial No. 597,349. 2 Claims. (Cl. 206—46.)



1. In combination, a bunch of tags, each with cord attached, the cords of the bunch gathered into a sheaf, a binder embracing the sheaf of cords near the free ends thereof to form a stricture and a spreading tuft of cord ends beyond the stricture, and a collar of light, stiff material encircling the sheaf between the tags and the stricture, and wide enough to serve as a barrier between the tags and the free cord-ends, the collar aperture being smaller than the tuft of free cord ends beyond the stricture.

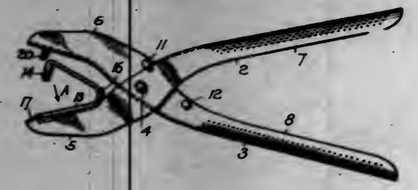
1,482,286. ANTIRATTLER. GEORGE F. COLLEY, Athens, Ga., assignor to Warren J. Conolly, Athens, Ga. Filed Nov. 24, 1923. Serial No. 676,873. 2 Claims. (Cl. 74—17.)

1. An anti rattler for the joints formed between parts, the one embodying a sleeve and the other a fork to receive the sleeve which is pivoted thereto, the same comprising a flat spring placed against a side of the fork member and having one end curved to snugly fit said sleeve, a bolt passing loosely through the spring and said fork and engaging the furcations thereto, and a nut threaded on the projecting end of the bolt and exerting a lateral pressure against the spring whereby to tension the same to automatically take up any wear in the joint and prevent rattle or noise.

1,482,287. PROTECTING SHIELD FOR COOKING-STOVE BURNERS. DAN W. DAUGHHETEE, Kiowa, Kans. Filed Sept. 27, 1922. Serial No. 590,870. 2 Claims. (Cl. 126—214.)

1. In combination with a stove having an apertured top, a burner and a grid thereover, a protective shield for the burner, said shield consisting of an endless inclined flange, a collar rising from said flange, said collar being perforated and substantially fitting and disposed within said opening, and fastenings passing through said grid and said flange.

1,482,288. ELECTRIC CONNECTION. CHARLES AUGUST DEUSCHER, New York, N. Y. Filed July 20, 1920. Serial No. 397,719. 2 Claims. (Cl. 287—109.)



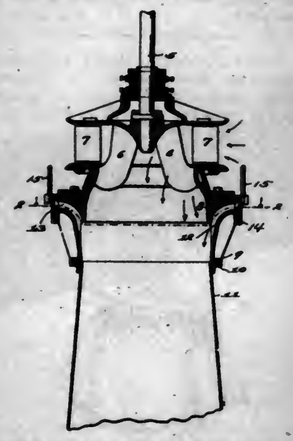
1. A method of applying a sleeve connection to an electrical conductor which comprises spirally twisting the end of the conductor back upon a portion thereof to form a twist, inserting said twisted portion within one end of the sleeve, and compressing the sleeve on the end of the conductor by the application thereto of pressure uniformly and simultaneously from all directions.

1,482,289. HEAT-CONSERVING DEVICE. HARRY DODGE, Danvers, Mass. Filed Dec. 24, 1921. Serial No. 524,790. 8 Claims. (Cl. 257—166.)

2. A device of the class described comprising a frame adapted to be inserted in an opening in a flue through which products of combustion are caused to pass, stop ribs within said frame, a diaphragm of relatively thin metal bearing upon said ribs, stops attached to said frame and engaging said diaphragm, and an air intake flue leading through the bottom of said frame and in advance of said diaphragm.

1,482,290. BENDING TOOL. PETER FRANK ELZI, Denver, Colo. Filed Feb. 2, 1921. Serial No. 441,824. 7 Claims. (Cl. 128—331.)

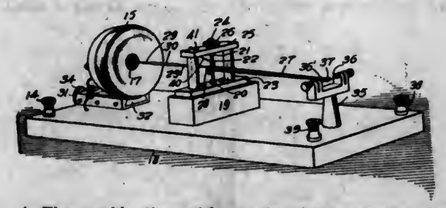
1. A tool for applying ear-tags consisting of a U-shaped clip having at its ends, a sharp-edged rivet-pin and an aperture to pass the same comprising cooperating jaws one of which has an opening for alinement with the aperture of a tag placed between them, and a shoulder in said opening to engage with the end of the rivet pin passed through said aperture when the jaws are closed together.



1,482,291. SELF-STROPPING SAFETY RAZOR. LOUIS V. ENGLAND, Laredo, Tex. Filed Sept. 20, 1922. Serial No. 589,394. 4 Claims. (Cl. 30—12.)

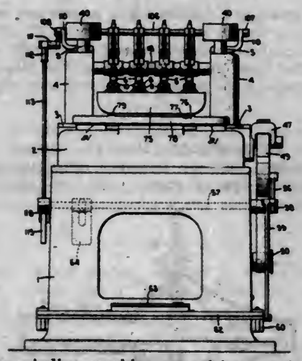
1. A razor of the character described comprising an elongated hollow handle, a frame mounted upon one end of the handle and formed with extensions, a pair of spaced rollers journaled through said extensions, a gear on the end of one roller, a pair of blade holders rotatably mounted within said frame, gear teeth formed on one of said blade holders and meshing with said gear, one of said blade holders being longitudinally movable and invertedly spring pressed, a blade engageable within said blade holders, a pair of rollers located below said blade holders and journaled in the frame, a plunger slidably longitudinally of said handle, a blade guard formed at hingedly connected sections carried by said plunger and provided with means for engaging the blade whereby to hold the same in closed position, in combination with a frame detachably connected with said first named frame and carrying a roller and suspension means, and a strop

trained about said last named roller and having one end inserted through said first named rollers with the other end engaged beneath said last named rollers in the frame.



1,482,292. TURBINE. JOHN H. FELTHOUSEN, York, Pa., assignor to S. Morgan Smith Company, York, Pa., a Corporation of Pennsylvania. Filed July 25, 1917. Serial No. 182,793. 8 Claims. (Cl. 253—17.)

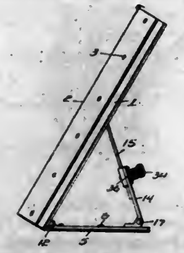
1. A turbine having a runner, means for admitting a motive fluid to the runner, a single draft tube, inlet means associated with the draft tube and having inwardly inclined passages in a portion thereof for the admission of a supplemental fluid into the draft tube in the direction of flow of the motive fluid from the runner through said tube to increase the suction in the latter and the head on the runner, and valve means located and operable exteriorly of the inlet means to regulate admission of the supplemental fluid.



1,482,293. RECORDER FOR RADIOTELEGRAPH OUTFITS. WILLIAM GEORGE HAROLD FINCH, Jersey City, N. J. Filed Dec. 9, 1921. Serial No. 521,148. 4 Claims. (Cl. 200—90.)

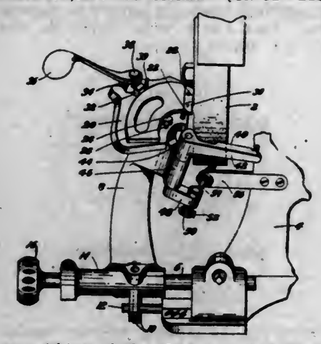
1. The combination with a magnetically vibrated diaphragm, of a bell crank lever journaled adjacent the diaphragm, a rigid connection between the vibrating diaphragm and the short arm of the bell crank lever, a contact positioned to engage the longer arm of the bell crank lever, and electrical connections between the lever and the contact.

4. The combination with an electrically vibrated diaphragm of a bell crank lever fulcrumed in spaced relation with the diaphragm and having legs of different lengths, a connecting rod extending from the vibrating diaphragm to the shorter leg of the bell crank lever, spaced contacts mounted in spaced relation to the fulcruming of the lever and presenting contact extremities in position to be engaged by the extremity of the longer leg of the lever, and means to vary the connection of the diaphragm to the shorter leg of the lever to adjust the relation of the longer leg of the lever between said spaced contact points.



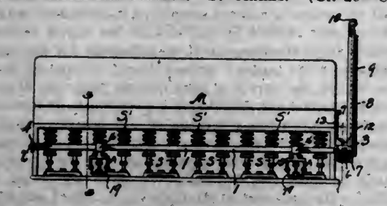
1,482,294. GRINDING MACHINE. WARREN F. FRASER, Westboro, Mass. Filed Sept. 18, 1919. Serial No. 324,349. 21 Claims. (Cl. 51—60.)

1. In a grinding machine comprising a grinding member and a work carrying member, means for moving one of said members bodily in a circular path, a carriage supporting the other member, a slide supporting said carriage and means for imparting independent movements in different directions in parallel planes to said carriage and said slide.



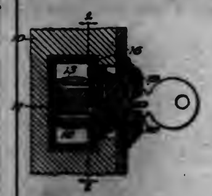
1,482,295. ADJUSTABLE LAND-SIDE ATTACHMENT FOR ROAD GRADERS. ATHUL A. FULCHER, Kinta, Okla. Filed Feb. 28, 1923. Serial No. 621,817. 1 Claim. (Cl. 37—143.)

In combination, a mold board having a lengthwise extending blade depending therefrom, a rearwardly extending right angularly disposed arm projecting from the rear face of said board at one end thereof, said arm having its rear end bifurcated, a rearwardly extending rectangular member having a reduced forward end extended between the furcations of said arm and pivotally connected therewith, said member arranged throughout above the bottom of said board, a land bar positioned against the outer face of said member and having its forward end projecting beyond the forward end of the member and further opposing one end of said board, means for detachably connecting said land bar to the outer face of said member, a plate positioned against the inner face of said member in proximity to its rear end and formed with a bifurcated rear end, means for securing said plate to the rear of said member, a permanently inclined lengthwise adjustable sectional coupling bar positioned between said board and member, means for hinging one end of said bar to the bifurcated end of said



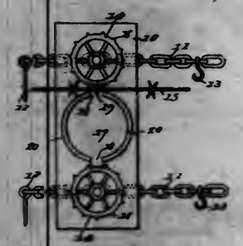
plate, means for hinging the other end of said bar to the rear face of said board at a point intermediate the ends thereof, and means permanently carried by said coupling bar for securing it in its adjusted position.

1,482,296. GRINDING MACHINE. JOSEPH GOULDBOURN and FRED RICKS, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 8, 1921. Serial No. 490,524. 14 Claims. (Cl. 51—218.)



1. In a machine of the class described, a grinder, a support for the similar shaped bodies of the tools of a set which vary as to cutting edge and one other characteristic, common means to locate similar parts of the bodies of the tools of a set at a definite point, and locating means engaging other parts of the similar shaped bodies of said tools, said locating means being arranged to cooperate with the varying characteristic of the tools to cause them to take different positions with relation to the support whereby their edges will be ground at different angles.

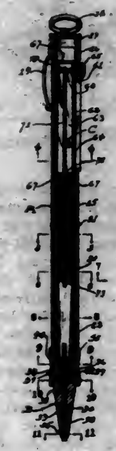
1,482,297. VALVE-SPRING-COMPRESSING DEVICE. LEO HYACINTH GRAY, Stamford, Conn. Filed Dec. 28, 1922. Serial No. 609,484. 17 Claims. (Cl. 29—86.3.)



1. A device of the class described including a suitably mounted shaft, a valve spring engaging member carried by the shaft, means for operating the shaft to compress the spring, and locking means for holding the parts in adjusted position.

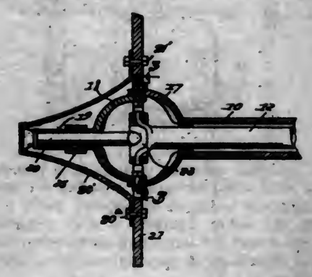
1,482,298. LOCK. BURT GARRNISON, New York, N. Y. Filed Mar. 30, 1922. Serial No. 548,012. 2 Claims. (Cl. 70—46.)

1. In a lock having a sliding bolt formed with rack teeth, means for operating said bolt, said means comprising a gear adapted to engage said rack teeth, said gear having a recess formed in one of its side faces, an operating member for said gear, a projection formed on the gear operating member and adapted to be received in the recess formed in the gear whereby the gear and its operating member are interlocked, and a plurality of bolts passing through said gear and having threaded engagement with said operating member to retain said gear and operating member in interlocked relation.



1,482,299. FENCE TOOL. HAMILTON D. GUFFEY, Unionville, Mo. Filed Apr. 5, 1923. Serial No. 630,082. 4 Claims. (Cl. 254—1.)

4. A device for the purpose described having a base provided with means for temporary engagement with a fence post, and rotary upper and lower runner guides carried by said plate, the latter being provided between the guides with an opening having throats adapted to be spanned by a runner engaging one of the guides, said guide being provided with spaced peripheral projections for engagement with the runner, said post engaging means consisting of chains provided with terminal shackle pins and hooks.

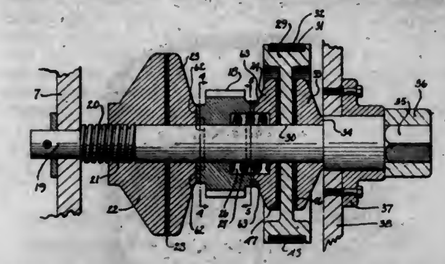


1,482,300. SELF-FEEDING AND SELF-SHARPENING PENCIL. ALFRED A. E. HANSEN, Philadelphia, Pa. Filed Oct. 13, 1921. Serial No. 507,513. 12 Claims. (Cl. 120—15.)

10. A pencil, comprising a hollow cylindrical barrel arranged to receive a reserve supply of independent leads, a tip detachably carried by one end of the barrel having a longitudinally extending axial way therein for the reception of one of the leads, a removable cap carried by the opposite end of the barrel, a disc shaped partition disposed within the barrel for dividing the barrel into independent compartments for the reception of the reserve supply of the leads, the partition having a plurality of openings in the periphery thereof for permitting the reserve supply of leads to pass therethrough, the partition being also provided with an axial guide opening in direct alignment with said bore, an operating rod slidably mounted in said axial guide opening, a casing disposed within said barrel including parallel side walls, and connecting end walls, the side walls having their ends anchored in said barrel and forming compartments in relation to the inner surface of the barrel for a reserve supply of the leads, the last mentioned compartments communicating with one of the compartments formed by the partition, certain of the inner ends of the side walls being provided with rack bars, a rotatable stub shaft, the barrel having a longi-

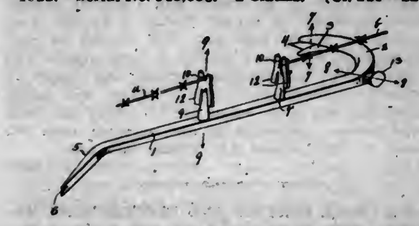
tudinally extending slot arranged to receive one end of the stub shaft, a thumb piece carried by said end of the stub shaft, pinions secured to said stub shaft engaging said rack bar, and an eye formed on the inner end of said operating rod for rotatably receiving said stub shaft.

1,482,301. FOUR-WHEEL DRIVE. HENRY HARDER, Grande Prairie, Alberta, Canada. Filed Dec. 16, 1920. Serial No. 431,165. 1 Claim. (Cl. 180—48.)



A vehicle having a front axle and motor driven axle shaft, axle spindle yokes pivotally connected on vertical axes to the extremities of the front axle and provided with spindle bearings, spindles mounted in said bearings and having universal connections with the extremities of the front axle shaft, steering arms provided with clamps engaged with the bearings of the spindle yokes, wheels, conical shaped housings having their apexes connected with the extremities of the spindles on the interior of the housings, the latter being flanged at the bases and connected to said wheels, a bar conecting the steering arms, and means for imparting longitudinal movement to said bar.

1,482,302. PORTABLE ELEVATOR. ETHAN N. HESCOCK, Westfield, N. J., assignor to New Jersey Foundry and Machine Company, a Corporation of New Jersey. Filed June 20, 1922. Serial No. 569,737. 8 Claims. (Cl. 192—15.)



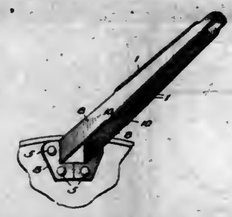
1. In a hoist mechanism the combination of a rotating member, hoisting means and automatic braking means

mounted on said rotating member, means to rotate the rotating member in one direction to raise a load, and

means to retard the rotation of said member to slowly lower the load and at the same time prevent the operation of the automatic braking means.

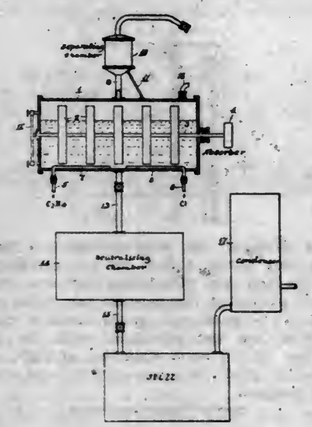
1,482,303. WIRE STRETCHING AND SPLICING TOOL. JOSEPH H. C. HIRD, Mason City, Nebr. Filed Apr. 1, 1922. Serial No. 548,836. 2 Claims. (Cl. 140—123.5.)

2. A bar having spaced wire-splicing elements attached thereto, each of said wire-splicing elements comprising a shank bifurcated at its upper end to provide spaced jaws, each of said jaws having a downwardly disposed extension substantially paralleling the shank and in spaced relation thereto.



1,482,304. TIRE TOOL. GEORGE F. HOAG, Shavertown, N. Y. Filed Oct. 30, 1922. Serial No. 597,893. 2 Claims. (Cl. 157—6.)

1. A tire removing tool comprising tongs having curved jaws to embrace the tire and pry its beads from their retaining rim, and a tire iron insertable under both beads for prying the tire laterally from the rim, said tire iron being pivoted to one of said jaws.

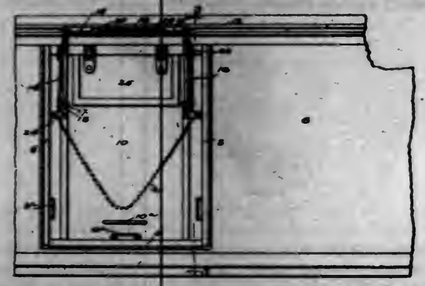


1,482,305. HANDLE. WILLIAM H. HODGSON, Rockville, Conn. Filed Jan. 27, 1922. Serial No. 532,170. 3 Claims. (Cl. 53—8.)

3. A handle consisting of a single piece of sheet metal bent intermediate its ends to provide opposite side members, the bended portion of said sheet metal piece being of reduced height to facilitate bending, the extremities of said side members being bent at angles relatively to the portions of the side members adjacent to said extremities, said last mentioned portions being spaced apart, arranged in substantially vertical parallel planes and being unconnected, the portions of said side members between the vertical plane portions and the portion of reduced height being of channel-shaped cross section with the channels

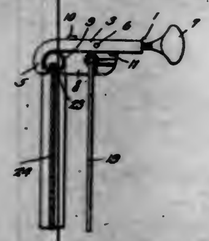
opening toward one another, said channel-shaped portions being spaced apart throughout substantially their entire length and said space being unobstructed in order to permit the circulation of air between the channel-shaped portions of said side members.

1,482,306. APPARATUS FOR MAKING HALOGENATED PRODUCTS. WILLIAM E. KIRST, Saginaw, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Oct. 17, 1919. Serial No. 331,446. 2 Claims. (Cl. 260—173.)



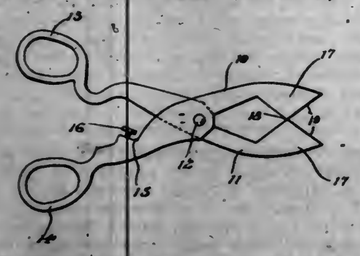
1. In an apparatus for making halogenated products, the combination of a horizontal cylindrical stationary absorbing chamber, an agitator comprising an axial shaft within said chamber and a series of paddles carried by said shaft, and separate pipes for supplying a halogen and an olefinic body to said chamber, said pipes having perforated extensions, respectively, disposed within said chamber along its lower wall.

1,482,307. FREIGHT-CAR DOOR. KUSTA ROBERT KOSKINEN, Brooklyn, N. Y. Filed Jan. 5, 1923. Serial No. 610,563. 2 Claims. (Cl. 20—24.)



1. In a freight car door structure including a recessed doorway in a avertical wall of the car, an overhead horisontal track longer than the width of the doorway, a carriage slidable along and rockable laterally of the track, a plurality of hanger elements vertically suspended from the carriage for swinging movements in a plane parallel to the plane of the doorway, a door pivotally suspended from the lower ends of said hanger elements thereby to permit, relative to the car, translational movements of the door in a given plane, swing-

ing movements of the door toward and away from said plane, and rotational movements of the door in said plane, and means for giving the door any or all of such movements at will, said means including a flexible ele-

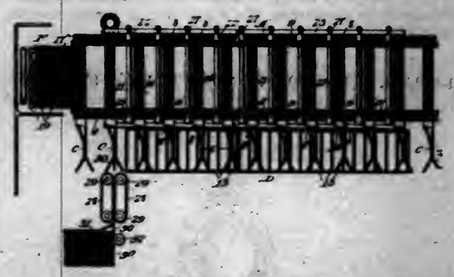


ment having a central pendant loop portion movably suspended outside the door and having the terminal portions of the element operatively associated with the hangers and also with the door.

1,482,308. GLARE SCREEN AND CLAMP. ALBERT F. LIEBERENZ, South Milford, Ind. Filed Jan. 26, 1922. Serial No. 531,945. 3 Claims. (Cl. 296—97.)

3. In a device of the class described, a clamp comprising a body having a fixed jaw; a movable jaw slidable on the body and cooperating with the efixed jaw; means for advancing the movable jaw with respect to the fixed jaw; and an eye guard mounted directly on the movable jaw and adjustable with the jaw, said movable jaw having seats extending at right angles to each other to hold the eye guard in operative or inoperative position.

1,482,309. BUTTONHOLE SCISSORS. LAURA A. LIGHTCAP, Dubuque, Iowa. Filed Sept. 11, 1920. Serial No. 409,601. 1 Claim. (Cl. 164—5.)

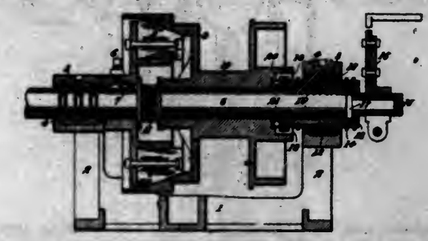


Buttonhole scissors comprising a pair of pivoted blades each having a substantially triangular cutting blade each of said cutting blades comprising cutting edges of equal length the apices of said cutting blades meet to provide initial cutting of material and to permit equal cutting of the material in each direction from the initial perforation by the points.

1,482,310. ROCK DRILL. JOSEPH LODATO, Ogden, Utah. Filed Aug. 26, 1921. Serial No. 495,641. 2 Claims. (Cl. 255—41.)

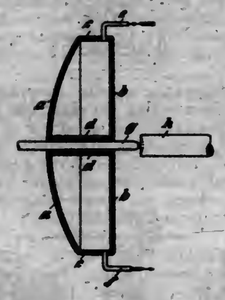
1. The combination with a bracket and its support, of a ratchet head on the bracket and a pivotal member projected therefrom, a hanger having a ratchet head complementary to the first head and secured on said pivotal member, a hammer pivoted on said member and an impact spring between said hammer and hanger, a reciprocable tool supported in the hanger and means for retracting said tool, means for retracting the hammer and means connected to and actuated from the movement of the hammer for turning said tool.

1,482,311. MAIL SORTING AND DISTRIBUTING MACHINE. FRED R. LONG and CLINTON E. LONG, Berwick, Pa. Filed Jan. 17, 1912, Serial No. 671,660. Renewed May 11, 1922. Serial No. 560,246. 58 Claims. (Cl. 214—11.)



1. In a mail sorting and distributing machine, a conveyor, a series of mail carriers upon the conveyor for carrying a number of single pieces of mail at the same time, means for feeding the mail singly to the different carriers, selective emeans for causing the carriers to automatically deposit the mail at any one of a series of points in their course of travel, and means for preventing the mail from being fed to the carriers except when the latter are in position at the receiving station.

1,482,312. THRUST SCREW FOR FRICTION HOISTS. ALFRED E. MASON, San Francisco, Calif. Filed Mar. 21, 1922. Serial No. 545,560. 1 Claim. (Cl. 192—94.)



In combination, a movable clutch part, a rotatable supporting shaft therefor on which said movable clutch part rotates and is longitudinally movable, a fixed bearing for one end of said shaft, a co-operating clutch part rotatable with and held from longitudinal movement on said shaft, a bearing box formed with an in-

ternal screw threaded bore arranged coaxially of the shaft, a cylindrical tubular shell open at one end and closed at its opposite end, forming a thrust member within said threaded bore and providing a bearing recess into which through its open end said shaft is received, said thrust member having a smooth interior and a threaded outer surface for co-operating with the threaded bore of the bearing box, a thrust bearing

between the end of the thrust member and said movable clutch part, a lever associated with the closed end of the tubular thrust member for imparting rotation thereto to advance said thrust member longitudinally in said bearing box to force said clutch parts into engagement, and a spring between said clutch parts and surrounding said shaft for disengaging said clutch parts on the retraction of said screw.

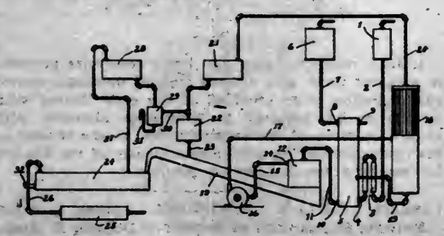
1,482,313. REFLECTOR. ADOLF MIETHE, Charlottenburg, near Berlin, Germany. Filed May 12, 1922. Serial No. 638,471. 6 Claims. (Cl. 88—24.)

1. In combination with a reflector and a source of light lying in the axis of said reflector, a heat-absorbing liquid screen interposed between said reflector and said source.

1,482,314. BILLIARD AND POOL TABLE COVER. THOMAS MURPHY, Brawley, Calif. Filed May 24, 1921. Serial No. 472,084. 1 Claim. (Cl. 46—6.)

The combination with a pool or billiard table, of a roller housing fixedly attached to the slanting side surface of the table frame so as to be within the vertical plane of the overhang of one of the side rails of the table, a spring actuated roller having its terminals journaled in the opposite ends of the housing, a flexible cover attached to and carried by the roller for extension transversely of the table to occupy a spanning relation to the playing surface thereof, means secured to the free edge of the cover for engagement with the side rail at the opposite side of the table from that carrying the housing.

1,482,315. PNEUMATIC-TIRE VALVE. FREDERICK MYERS, New York, N. Y. Filed Aug. 14, 1922. Serial No. 581,704. 12 Claims. (Cl. 152—12.)

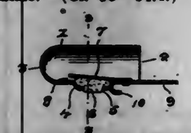


1. In a pneumatic tire valve, a tubular member adapted for mounting in a casing stem, said tubular member having a lateral air port therein adjacent the inner end, a valve stem resiliently mounted in the tubular member, and a cushion valve carried by the inner end of the valve stem associated with the lateral air port.

1,482,316. SAFETY CHAIN FASTENER. ERNEST B. NEWTWIG, Jefferson City, Mo. Filed July 9, 1923. Serial No. 650,460. 6 Claims. (Cl. 24—69.)

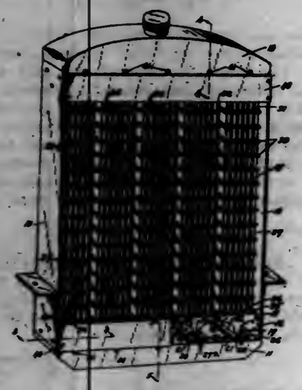
1. A fastener comprising a body with a notch, a lever member having an inner section pivotally connected to the body and notched and also having an outer section hingedly connected for sidewise swinging to the inner section and adapted when the inner member is closed to be swung laterally against one side of the body, and means carried by the body and adaptel after the said swinging of the outer section against the body to be moved to position to hold said outer section against lateral movement away from the body.

1,482,317. PROCESS OF MAKING THIOUREAS. WILLIAM G. O'BRIEN, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 13, 1920. Serial No. 430,251. 13 Claims. (Cl. 260—125.)



1. The method of manufacturing a thiourea by a continuous process which comprises adding a primary amine and carbon bisulfide at a regulated rate into a reaction chamber and maintaining the chamber at a temperature above the melting point of the product formed.

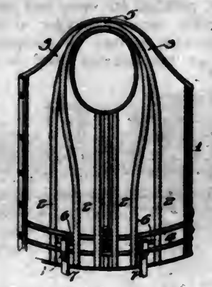
1,482,318. PROTECTIVE DEVICE. FRANK W. PEEK, Jr., Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed May 20, 1918, Serial No. 235,450. Renewed July 19, 1922. Serial No. 576,150. 8 Claims. (Cl. 175—30.)



1. In a protective device, the combination with cooperating electrodes spaced apart to form a spark gap, of shielding means for said electrodes having a contour corresponding substantially to an equipotential surface.

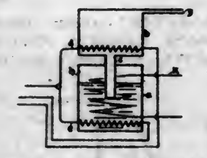
1,482,319. ENVELOPE MOISTENER. SAMUEL J. T. PRICE, Auburn, Ala. Filed Nov. 15, 1922. Serial No. 601,128. 2 Claims. (Cl. 95—54.4.)

2. A device of the class described comprising a tubular member having a finger receiving opening at one end thereof, a reservoir at the other end thereof, the side of the member having an opening, a pad of absorbent material projecting through said opening, means for permitting some of the water in the reservoir to pass to the pad, a hook on the member for engaging the flap of an envelope and an extension on the open end of the member for receiving a string or the like to hold the device in place.



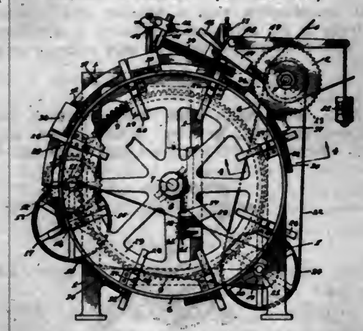
1,482,320. RADIATOR. EDWARD M. ROSENFELD, Cleveland, Ohio. Filed Mar. 25, 1922. Serial No. 546,744. 5 Claims. (Cl. 257—129.)

1. In a radiator, upper and lower reservoirs provided in adjacent faces with aligned opposed openings, removable radiation units provided at the ends thereof with headers having openings in their ends alignable with aligned openings of the reservoirs, and means carried by the reservoirs and movable longitudinally of the headers for clamping the headers in position.



1,482,321. CHILD'S UNDERBODY. LOUISA L. ROYE, Malvern, Pa., assignor of one-half to Dorothy B. Jones, Philadelphia, Pa. Filed Mar. 18, 1922. Serial No. 544,718. 1 Claim. (Cl. 2—98.)

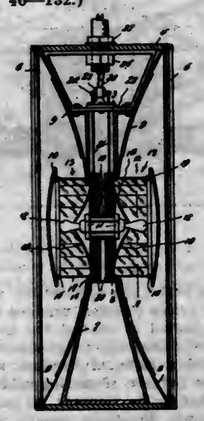
In a child's undergarment of the character stated, a body provided with shoulder straps, vertical stays on said body and shoulder straps, and horisontal stays crossing said vertical stays near the lower portions of said body, said vertical stays being continuous and convergent from the lower ends of said body on the front and rear thereof to the tops of said shoulder straps and



shoulder and meeting on said tops, and stocking supporting pieces each connecting a pair of said convergent vertical stays adjacent to said horizontal stays, each of said pieces being adapted to sustain a hose supporter between the members of a pair of convergent stays.

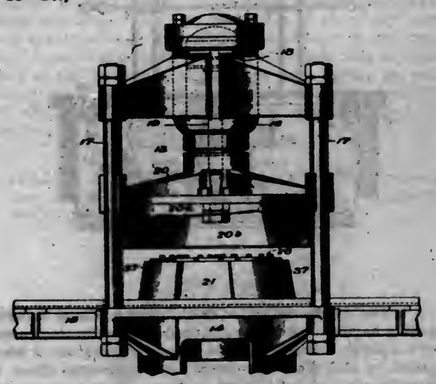
1,482,322. ABSORPTION REFRIGERATOR. EDMUND RUMPLER, Berlin-Johannisthal, and ALBERT RENNAU, Berlin-Tegel, Germany; said Rennau assignor to said Rumpler. Filed Jan. 6, 1922. Serial No. 527,465. 8 Claims. (Cl. 62—118.)

1. In a refrigerator, a boiler comprising two vessels, a conduit interconnecting the same, one end of the conduit terminating at the bottom of one of the vessels and the other end terminating intermediate the top and the bottom of the other vessel, an outlet near the top of the first mentioned vessel and means for heating the contents of the vessels, the vessels being closed except for the said conduits and the said outlet.



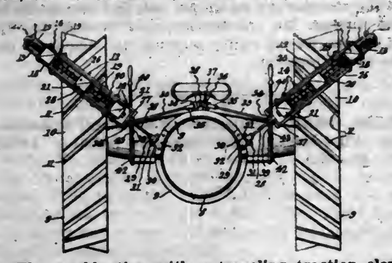
1,482,323. ROTARY-FEED GANG SAW. HOWELL R. SANDERS, Sacramento, Calif. Filed Dec. 3, 1921. Serial No. 519,761. 5 Claims. (Cl. 143—57.)

5. In a gang saw, the combination with a plurality of spaced saws and a rotatable carrier drum arranged to move blocks to be sawed into slats into engagement with said saws, of an apertured presser foot pivotally mounted adjacent the saws and the drum; a presser block slidably mounted within said foot and extending outwardly from both ends thereof; fingers formed upon the forward



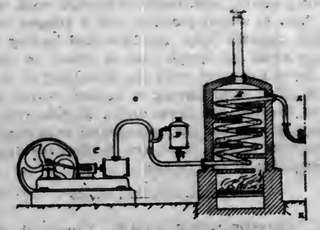
end of the block to extend between the saws, said fingers being formed by grooves cut therethrough by the saws; and means for normally depressing said foot, block and fingers against a block to be sawed while in engagement with the saws to prevent displacement of the block and slats by the saws.

1,482,324. SIGN. WALTER A. SCHULTZ, Brownsville, Tex. Filed June 25, 1923. Serial No. 647,475. 2 Claims. (Cl. 40—132.)



1. In a sign of the class described, a drum shaped casing, a vertical support within the casing, stationary lamps upon opposite sides of said support, rotary lamp casings surrounding said lamps, said lamp casings including various colored glass plates, sign letters within said drum shaped casing and surrounding said lamp casings, and means for rotating said lamp casings.

1,482,325. APPARATUS AND METHOD FOR MOLDING TREAD BANDS. WALTER E. SHIVELY, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 26, 1920. Serial No. 406,256. 16 Claims. (Cl. 18—17.)



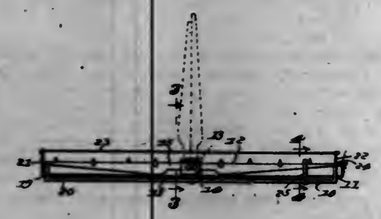
1. A mold for tire treads comprising inner and outer concentric annular mold members one of which comprises segmental sections movable relatively to the other member, and means for moving the members to active position, the members being recessed whereby in active position they provide an annular mold chamber including a medial portion having a transversely curved inner wall and a relatively transversely flat outer wall and relatively thin laterally extending marginal portions.

1,482,326. CLEANING DEVICE. REED SPONSLER, Humeston, Iowa. Filed July 28, 1923. Serial No. 654,476. 4 Claims. (Cl. 280—158.)

1. The combination with a traveling traction element having transversely inclined cleats, of an endless belt supported across the cleats and being free from positive driving means, non-rotating scraping blocks having inclined faces to engage with the cleats and to be shifted thereby longitudinally of the cleats which they clean when traveling longitudinally thereof, said scraping blocks being secured to the endless belt so that they cannot turn upon their indiivdual axes with relation to the endless belt.

1,482,327. PRODUCTION OF METAL OXIDES, ESPECIALLY LEAD OXIDES. JACQUES ANTOINE THIBAULT, Paris, France. Filed Jan. 5, 1920. Serial No. 349,548. 3 Claims. (Cl. 75—19.)

1. The improved method for the production of metal oxides which consists in charging the solid metal in a divided state in a closed vessel, heating the said metal at a temperature below its melting point, introducing a current of air under pressure into the vessel together with water-vapor, agitating the metal so as to improve its contact with the air and water-vapour, simultaneously maintaining a given pressure of air and water vapour in the vessel and finally raising the temperature above the melting point of the metal but below the melting point of an intermediary oxide.

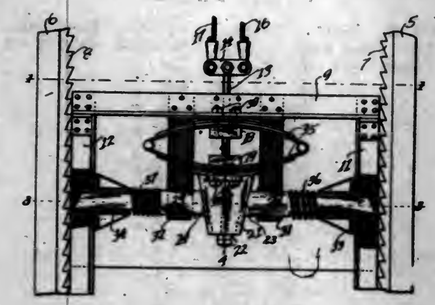


1,482,328. BARREL. JOSEPH S. THOMAS, Shippensburg, Pa. Filed Feb. 16, 1923. Serial No. 619,466. 2 Claims. (Cl. 217—44.)

1. A barrel including a bottom and top, eyes projecting beyond the periphery of said parts, the body of the barrel being made up of a plurality of sections, hoop sections

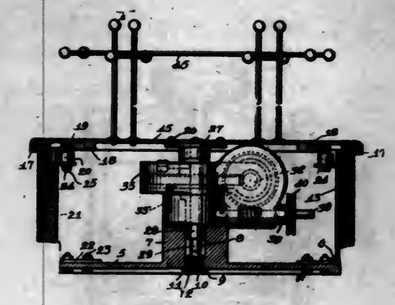
secured to each body section and projecting beyond the edges thereof and provided with apertures, the apertured extremities of the respective sections being overlapped when the sections are set up for use, and connecting rods passed through the eye members and through the apertured extremities for rigidly securing the component parts of the barrel together.

1,482,329. TRAP. HJALMER H. TOLLEFSON, Scandinavia, Wis. Filed Mar. 1, 1920. Serial No. 362,311. 1 Claim. (Cl. 43—92.)



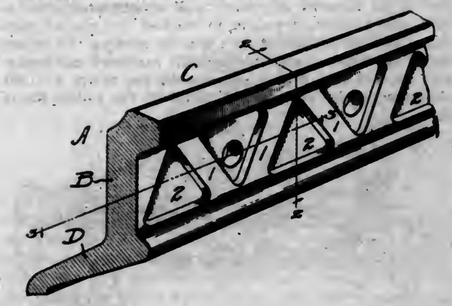
An animal trap having a base bar provided with upturned terminals, jaws mounted upon the base bar and adapted when open to engage said terminals as rests, an actuating spring operatively connected with said jaws to move them to closed position, and a trigger consisting of a rocket mounted upon the base and having terminal upstanding arms of which one is offset to provide a shoulder for engagement with the extremity of one of the jaws, said offset arm having a normal spring tendency away from the engaged jaws, and a flexible trip member connecting the arms of the rocker and counteracting the spring tendency of the offset arm while providing means for the actuation of the rocker.

1,482,330. INDOOR GOLF GAME. LINNIE B. TREDOUL, New York, N. Y. Filed May 7, 1921. Serial No. 467,753. 2 Claims. (Cl. 46—63.)



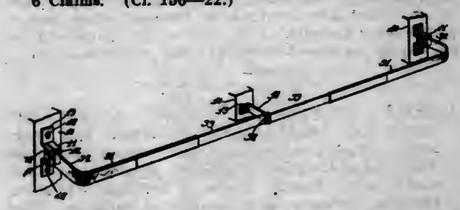
2. In a device of the class described, a chart representing a golf course and having the tees and holes connected by a plurality of differently colored lines each having a plurality of circles representing the "lie" of the ball at each stroke, and certain of said circles having crosses indicating hazards.

1,482,331. AUTOMATIC ELEVATOR BRAKE. JOHN VANSLETT, San Francisco, Calif., assignor of twenty-five per cent to Glenn L. Waring, Alameda, Calif. Filed July 26, 1922. Serial No. 577,596. 1 Claim. (Cl. 187—82.)



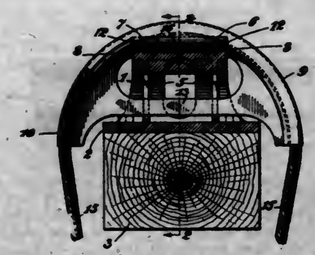
In an elevator brake, the combination with an elevator cage, of parallel guides therefor, ratchets mounted on said guides, cables adapted to control the movement of said cage, a downwardly tapering wedge secured to said cable, an elliptical spring mounted between said wedge and said cage for the purpose of moving said wedge with respect to said cage, bolts mounted on said cage and extending in opposite directions toward said ratchets, a shoulder formed on each of said bolts, and a spring interposed between said shoulder and said cage for the purpose of maintaining said bolts in contact with said wedge, substantially as and for the purpose specified.

1,482,332. DISPLAY DEVICE. FRANK WEBBB, Jersey City, N. J. Filed Oct. 20, 1920. Serial No. 418,231. 1 Claim. (Cl. 74—7.)



A device of the character described comprising a main housing having a centrally arranged stud perforated to receive a shaft, a shaft mounted in said perforation, a gear carried by said shaft and occupying a horizontal plane, a second shaft mounted at right angles to the first-mentioned shaft, a worm gear carried by said second-mentioned shaft and meshing with the first-mentioned gear, a worm wheel carried by said second-mentioned shaft, a worm gear meshing with said worm wheel, a shaft carrying said worm gear, a plurality of housings for housing each of said gears, said housings comprising an integral structure surrounding the first-mentioned gear, and means for securing said housings to the upper end of the centrally-disposed stud of the first-mentioned housing.

1,482,333. RAIL JOINT WITH LIGHTENED WEB. BENJAMIN WOLHAUPTER, New Rochelle, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed July 9, 1923. Serial No. 650,452. 8 Claims. (Cl. 238—243.)

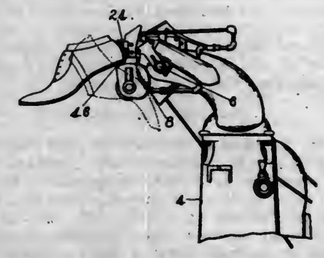


1. A rolled rail joint bar including a web having subnormal displacements of metal producing inclined trussing ribs extending from the head to the foot of the bar.

1,482,334. CURTAIN-ROD FIXTURE. HARRY O. WOLFF, Chicago, Ill. Filed July 17, 1922. Serial No. 575,469. 6 Claims. (Cl. 156—22.)

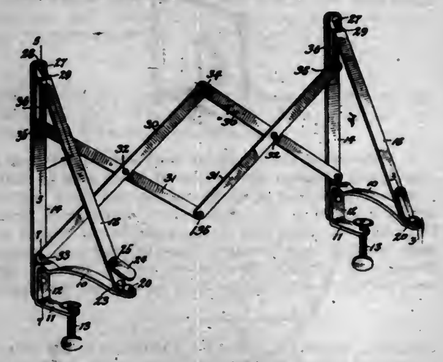
4. In a supporting structure for double curtains, an intermediate curtain rod supporting bracket consisting of an L-shaped member adapted to be secured at one of its ends to an upright support and having near its other end two pairs of side by side transversely arranged aligned slots, the slots of each pair being open at their outer ends and spaced at their inner ends by a portion of said member to receive and engage the ends of curtain rods on either side of the bracket, said rod ends each having an open ended slot terminating in an enlargement for the reception of the portion which divides said aligned slot of the bracket.

1,482,335. GRIP HANGER. ALBERT P. WORTHINGTON, Los Angeles, Calif. Filed Dec. 4, 1922. Serial No. 604,973. 3 Claims. (Cl. 74—5.)



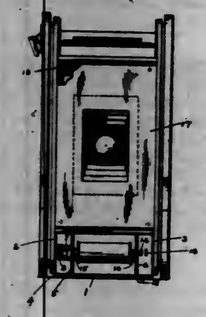
1. In a device of the character described, in combination, a frame adapted to rest upon a walking beam, a cable supporting member pivotally mounted on said frame, a bearing surface on said member engaging with a bearing surface on said frame, and interlocking recesses and flanges on said frame and member preventing relative lateral displacement of said frame and member.

1,482,336. METHOD OF MAKING RUBBERIZED FIBER COMPOSITION. BURT H. YACKER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 16, 1922. Serial No. 588,713. 10 Claims. (Cl. 106—23.)



10. The method of treating fibers which comprises, beating them in water, removing them from the water, displacing the water in the fibers with a liquid miscible with water and toluol, and displacing the liquid with a mixture of toluol and alcohol.

1,482,337. SHOE-SHAPING MACHINE. HARRY L. YEATON, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 5, 1919. Serial No. 308,703. 16 Claims. (Cl. 12—51.)

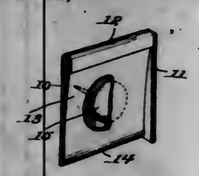


1. A machine of the class described having a main frame, a rotary beater, and a reciprocating beater confined to movement in a horizontal plane, said beaters being mounted side by side on said frame.

1,482,338. LUGGAGE CARRIER. JOHN ZILLIOX, Orchard Park, N. Y. Filed Dec. 21, 1921. Serial No. 523,981. 4 Claims. (Cl. 224—29.)

1. A luggage carrier comprising a horizontal base, a standard connected at its lower end with one end of said base and provided at its upper end with a button having a reduced neck and an enlarged head, and a brace detachably connected at its lower end with the opposite end of said base and provided at its upper end with a curved lip which engages its convex side with said standard and which has a longitudinal slot receiving the neck of said button.

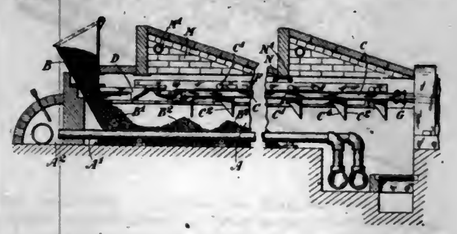
1,482,339. CAMERA ATTACHMENT. JULES ABELES, Rochester, N. Y. Filed Mar. 31, 1923. Serial No. 629,135. 2 Claims. (Cl. 242—71.)



1. A camera attachment comprising a trough adapted to be mounted in the film pocket of a camera, a pair of discs mounted transversely in said trough so as to engage the ends of a film spool, yielding means to normally force one of said discs toward the middle of said trough from one end thereof, adjustable means adapted to hold the other of said discs in a predetermined position in said trough near the other end thereof.

1,482,340. RUBBER COMPOSITION AND PROCESS OF MAKING SAME. GEORGE WILSON ACHESON, Newark, N. J., assignor to Acheson Corporation, New York, N. Y., a Corporation of Delaware. Filed July 15, 1920. Serial No. 396,462. 3 Claims. (Cl. 106—23.)

1. Process of making a rubber composition, comprising subjecting an inorganic solid in paste form to attrition in presence of an organic deflocculating agent, and incorporating the product with rubber.



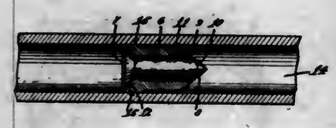
1,482,341. CARD HOLDER. OSCAR ARNOLD, Woodridge, N. J. Filed May 11, 1923. Serial No. 638,337. 3 Claims. (Cl. 40—11.)

3. A device of the character described formed from a single piece of metal bent intermediate its ends to define a main portion and a spring tongue, the main portion having a flange at one edge and an overhanging flange at an adjacent edge, said tongue being bowed toward the main portion and engaged beneath the overhanging flange, and a beaded fastener projecting through said main portion and having its head engaged by the tongue.

1,482,342. RABBLE FOR LOW-TEMPERATURE COAL-DISTILLATION PURPOSES. EDWARD BARRS, London, England. Filed Dec. 19, 1921. Serial No. 523,456. 12 Claims. (Cl. 198—224.)

1. The combination with a reciprocatory rabble comprising a frame, scrapers depending therefrom, and a plurality of supporting rollers mounted laterally on the frame, of a pair of fixed upper tracks for the rollers, a pair of fixed lower tracks for the rollers, which upper tracks are so shaped and each so arranged in relation to its corresponding lower track that at a point traversed by the rollers towards the end of their rearward movement the rollers can travel off their upper tracks on to the lower, a plurality of ramps, one for each roller, each rising from a lower track towards the corresponding upper track at a point traversed by a roller towards the end of its forward movement, and shunt-plates, one for each upper track, arranged to connect the top of each ramp with its alloted upper track for guiding the rollers on to the upper tracks during their rearward movement, and slidable into a position wherein the ramps are left unobstructed for the upward travel of the rollers on to them.

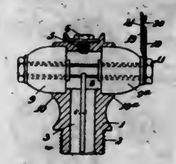
9. A rabble comprising in combination a supporting frame having laterally-disposed rollers for running on tracks, a plurality of transverse scrapers depending one behind another from said frame, a plurality of downwardly-directed raking-fingers mounted on the rear end of the frame and arranged at different levels, and a pack-breaker mounted on the rear of the frame and extending to the rear further than said raking-fingers.



1,482,343. PROCESS OF MAKING α-ALKYLATED ACIDS AND DERIVATIVES THEREOF. MAX BOCKMÜHL, Hochst-on-the-Main, and ADOLF SCHWARZ, Frankfort-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Brüning, Hochst-on-the-Main, Germany, a Corporation of Germany. Filed Aug. 14, 1922. Serial No. 581,887. 4 Claims. (Cl. 260—124.)

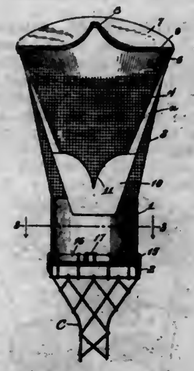
1. The process of producing α-alkylated acids and derivatives thereof which consists in causing heavy metals to react upon mixtures of halogen compounds of the general formula

$$\begin{matrix} R \\ R \end{matrix}\!\!>\!CHlg—R'$$



wherein R may be an alkyl residue and R' a carboxyl-carbonic acid-amide-, or a cyan-residue, and Hlg stands for halogen—with alkyl halides and transforming the carbonic acids, esters and nitriles thus obtained into the amides.

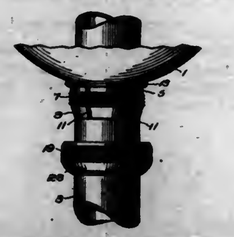
1,482,344. BULLET. ROY A. BRIGGS, Malone, N. Y. Filed Nov. 2, 1922. Serial No. 598,561. 4 Claims. (Cl. 102—28.)



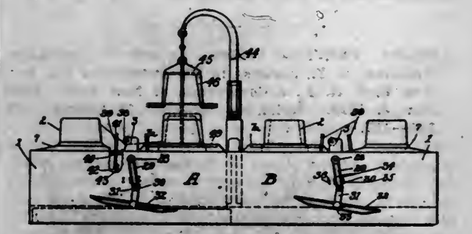
2. A bullet comprising a core having a frusto-conical head at one end, a sleeve upon the core, and a body extending around the sleeve and the core and engaging the head, the base portion of the body being expansible by the head when subjected to gas pressure, the exposed face of the head of the core being flat and extended radially beyond the head receiving opening in the body.

1,482,345. SPARKING PLUG FOR INTERNAL-COMBUSTION ENGINES. ALBERT GEORGE BROWN, London, England, assignor to The Brown Pistol Sparking Plug Limited, London, England, a British Company. Filed Nov. 29, 1920. Serial No. 427,258. 1 Claim. (Cl. 123—169.)

A sparking-plug for internal combustion engines comprising a tubular casing adapted to be mounted outside the cylinder, a transverse passage traversing the top of the casing, a hollow insulated electrode mounted in and along the transverse passage so that part of its outer wall is freely accessible to the motive gases and its inner wall is adapted to be swept by a current of air passing straight through the electrode, and earthed electrodes adjustably mounted in proximity to the exterior of the insulated electrode.



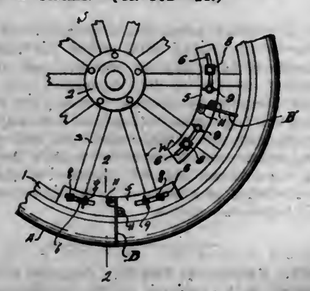
1,482,346. FRUIT GATHERER. BENJAMIN BURGESS Danville, Ill. Filed Apr. 11, 1923. Serial No. 631,429 6 Claims. (Cl. 56—334.)



2. A fruit gatherer comprising a hood consisting of a bottom sleeve, a perforated wall extending a material distance around the sleeve, an end portion of the wall being secured to the sleeve, strips connected to the end marginal portions of said wall, a top member secured to the upper portions of the wall and the strips, said top member at a point between the strips being provided with a slot, and a plate connected to and bridging the space between the lower portions of the strips, said plate being provided with a slot, each of said slots being substantially V-shaped.

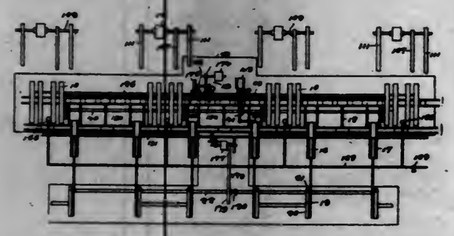
1,482,347. FIXTURE CANOPY. GEORGE W. CONNER, Roslindale, Mass. Filed Mar. 21, 1922. Serial No. 545,534. 2 Claims. (Cl. 240—87.)

1. The combination with a fixture canopy of sheet material and provided with an opening for receiving a fixture pipe, of a sleeve member having a flange abutting the exterior of said canopy about the edges of said opening and a portion entering said opening and engaging the interior of said canopy about the edges of said opening, said sleeve being of internal diameter to fit said fixture pipe and having an extended portion forwardly of said flange, said extended portion being provided with a screw thread intermediate its length and with an exterior taper at its end forwardly of said screw threads, said extended portion being further provided with longitudinal slots substantially throughout its length, and a nut having screw threads for engaging the screw threads of said sleeve and a portion for engaging the tapered portion of said sleeve, whereby when the canopy is placed on said fixture pipe and the nut is screwed on the sleeve said nut will bind said sleeve to said fixture pipe.



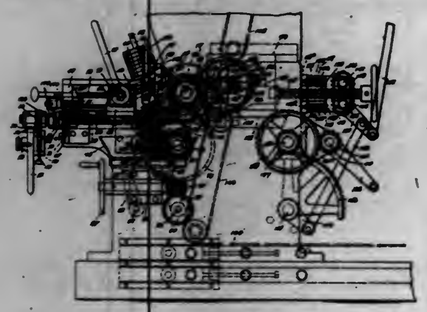
1,482,348. WIRE-DRAWING MACHINE. FRED B. CROSBY, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 7, 1920. Serial No. 401,840. 17 Claims. (Cl. 205—16.)

1. A wire drawing unit comprising a bench, a pair of blocks mounted on the top of said bench, a die located between said blocks, a separate source of power located within said bench, and means for selectively connecting said blocks to said source of power to draw wire through said die in either direction.



1,482,349. NONSLIPPING ATTACHMENT. DEE CROSS, Houston, Ark. Filed Jan. 13, 1923. Serial No. 612,400. 2 Claims. (Cl. 301—44.)

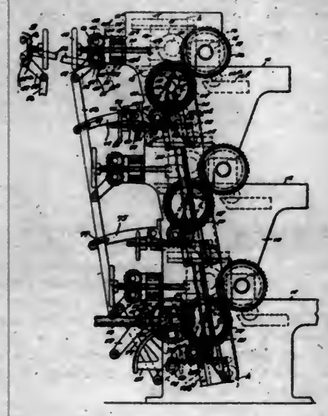
1. An attachment for a spoked wheel comprising a connecting plate adapted to be positioned to one side of the felly of the wheel and of a length to bridge the space between a pair of adjacent spokes, the opposite ends of the plate being provided with longitudinally disposed slots, clamping means extending through each



of the slots and in engagement with the adjacent spoke, and a blade extending outwardly from the plate at a point between the slots, said blade being arranged to one side of the plate with the faces thereof substantially perpendicular to the adjacent face of the plate.

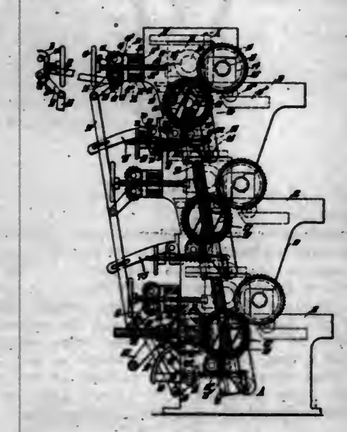
1,482,350. MACHINE FOR SAWING AND PUNCHING RAILS. JAMES S. DAYTON, Cumberland, Md. Filed May 14, 1920, Serial No. 381,388. Renewed Oct. 30, 1923. 48 Claims. (Cl. 164—90.)

1. In a machine of the class described, dies and means for mounting the dies, punches and mounting means therefor, feeding means, and means for automatically raising the die mounting means by the return of the feeding means to normal position.



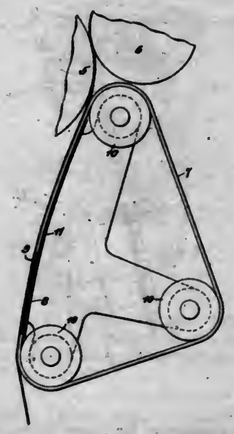
1,482,351. PRINTING PRESS. CHARLES F. DAUSMANN, Brooklyn, N. Y., assignor to The Prismatone Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 3, 1919. Serial No. 335,420. 18 Claims. (Cl. 101—157.)

1. In a printing press, the combination of a printing cylinder, an impression roll, means for simultaneously and selectively adjusting the opposite ends of the printing cylinder relative to the impression roll, means for adjusting the pressure relation between the printing cylinder and the impression roll, means normally tending to quickly separate the cylinder and roll, and quick acting releasing means operable counter to said last means for holding the cylinder and roll together in their adjusted pressure relation and adapted to be operated for releasing said separating means.



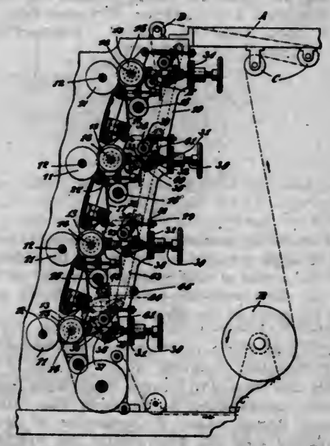
1,482,352. PRINTING PRESS. CHARLES F. DAUSMANN, Brooklyn, N. Y., assignor to The Prismatone Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 6, 1919, Serial No. 315,603. Renewed Feb. 7, 1921. Serial No. 443,226. 18 Claims. (Cl. 101—181.)

3. In a multicolor press, spaced sets of print and impression rollers, a movable blanket supported between the spaced printing sets and having a part thereof disposed in juxtaposition to the web extending between the printing sets, means acting upon the blanket to engage



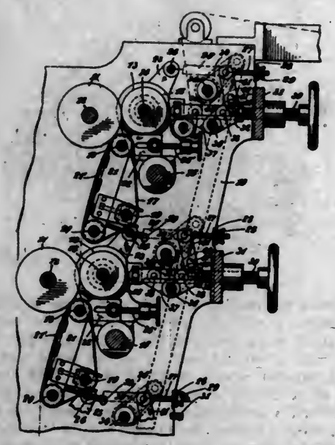
the same with the unprinted side of the web whereby the web is placed under tension, and means for moving the blanket.

1,482,353. PRINTING PRESS. CHARLES F. DAUSMANN, Brooklyn, N. Y., assignor to The Prismatone Co., Inc., New York, N. Y., a Corporation of New York. Original application filed Aug. 6, 1919, Serial No. 315,603. Renewed Feb. 7, 1921, Serial No. 443,226. Divided and this application filed Feb. 28, 1920, Serial No. 362,080. Renewed Nov. 17, 1921. Serial No. 515,973. 11 Claims. (Cl. 101—184.)



1. In a multicolor press, a plurality of print and impression rollers, manually adjustable means for urging the impression rollers out of engagement with the print rollers, means acting against said manually adjustable means for advancing the impression rollers against said print rollers, blankets normally urged into the line of the passes of said print and impression rollers, and operating means connected to all of said advancing means and to said blankets, whereby said impression rollers may be operated simultaneously and equally toward and from the print rollers and said blankets may be operated simultaneously and equally therewith into and out of line with the said passes of the rollers.

1,482,354. ART OF PRINTING. CHARLES F. DAUSMANN, Brooklyn, N. Y., assignor to The Prismatone Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 17, 1922. Serial No. 529,812. 10 Claims. (Cl. 101—248.)



1. In the art of printing, maintaining registration of a web with a printing surface by subjecting the web to the influence of static electricity, and confining the effective action of such static electrical influence to lines at right angles to the line of feeding movement of the web whereby the web is held against lateral deviation from the line of feed.

1,482,355. PRINTING PRESS. CHARLES F. DAUSMANN Brooklyn, N. Y., assignor to The Prismatone Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 2, 1922. Serial No. 533,527. 3 Claims. (Cl. 101—181.)

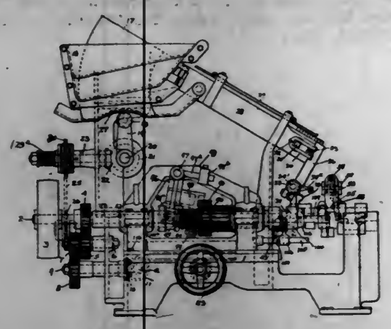
1. In combination with a printing press having a plurality of vertically spaced printing couples, each consisting of a printing cylinder and an impression roller, means arranged in the spaces between the printing couples for producing electrostatic charges acting by their attractive influence over substantially the entire area of the sections of paper web extending between the printing couples to maintain register of the web with the printing cylinders, and means operable to withdraw the impression rollers from their operative positions in relation to the printing cylinders and to simultaneously relieve the web from the attractive influence of the electrostatic charges.

1,482,356. WEB-PRINTING PRESS. CHARLES F. DAUSMANN, Brooklyn, N. Y., assignor to The Prismatone Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 10, 1922. Serial No. 535,607. 9 Claims. (Cl. 101—181.)

1. In combination with a printing press having a plurality of spaced printing units, each including an element having movably supported bearings, a web registering device arranged in each of the spaces between the spaced printing units, means supporting the web registering devices between and upon the movable bearings of the adjacent printing units for movement as a unit with said bearings, and a manually operable throw-off mechanism connected to said bearings.

1,482,357. CASTING SYNTHETIC RESIN. CARLETON ELLIS, Montclair, N. J. Filed Sept. 26, 1922. Serial No. 590,672. 4 Claims. (Cl. 18—47.5.)

4. The process which comprises reacting on urea with formaldehyde in the presence of a basic catalyst, neutralizing and acidifying and pouring the solution into molds to solidify.

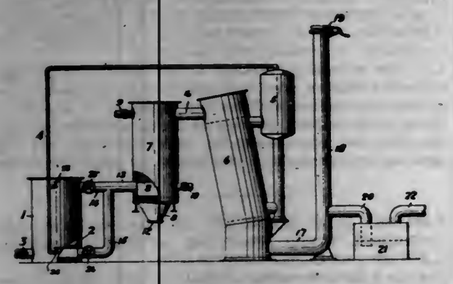


1,482,358. CASTING CONTAINING SYNTHETIC RESIN AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J. Filed Sept. 29, 1922. Serial No. 591,262. 5 Claims. (Cl. 18—47.5.)

3. The process of making a cast article which comprises reacting on urea with paraform in the presence of an aqueous alkaline solution just sufficient in amount to bring about reaction between urea and paraform to form the methylol urea, acidifying with a strong acid and pouring the composition into molds to permit it to set.

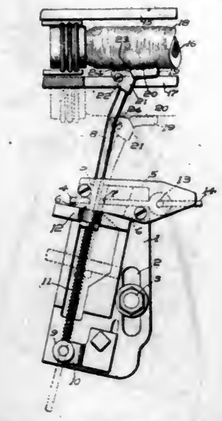
1,482,359. BOLT MACHINE. MICHAEL J. RILEY, East Cleveland, Ohio. Filed Aug. 2, 1920. Serial No. 400,705. 63 Claims. (Cl. 10—89.)

4. In a bolt threading machine, a drive shaft, a cam shaft driven thereby, a hopper for receiving bolt blanks, a chute leading the blanks from the hopper, a lock at the outlet of the chute, a transfer arm opening the locks and releasing a single blank, and receiving the released blank, means for causing the transfer arm to remove the



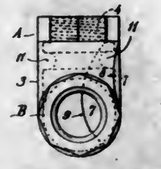
blank from the chute outlet, a pair of jaws for holding the blank, means for operating the jaws to grasp and release the blank, a spindle rotated from the drive shaft a cutting head on the spindle, means for reciprocating the spindle from the blank, means for closing the cutting head during its retracting movement, means for opening the cutting head after it has cut threads on the blank, and means for actuating the opening means.

5. Means for holding a blank comprising a stationary jaw member, a movable jaw member, a block reciprocating in guide ways and carrying the movable jaw member at one end, a beveled surface at the other end of the block, a tapered wedge engaging the beveled surface, a second block having a beveled surface engaging the tapered wedge, a spring carried by the second block pressing the wedge between the blocks, a roller on the second block, and a cam engaging the roller to normally cause the blocks to reciprocate to operate the jaws.



50. Bolt threading mechanism comprising a bed, a blank holder stationary on the bed, a head adjustable toward and from the blank holder, a spindle in the head a cutting head on the spindle, a gear on the spindle a drive shaft on the bed, a gear adjustable along the drive shaft to engage the gear on the spindle throughout its reciprocation and rotate the spindle, a cam shaft on the bed and driven from the drive shaft, means carried by the adjustable head to reciprocate the spindle in the head toward and from the blank holder, a cam adjustable on the cam shaft to operate the spindle reciprocating means, and means to hold the adjustable parts in their adjusted positions.

1,482,360. SELF-STEAMING BLUE-GAS PLANT. JOHN M. RUSBY, Philadelphia, Pa., assignor to The United Gas Improvement Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 2, 1916. Serial No. 101,228. 1 Claim. (Cl. 48—78.)

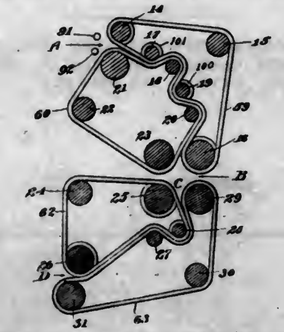


A self-steaming blue gas plant comprising the combination of a generator, a boiler, an igniter interposed between the boiler and generator, and air inlet connections at the inlet and outlet ends of the igniter.

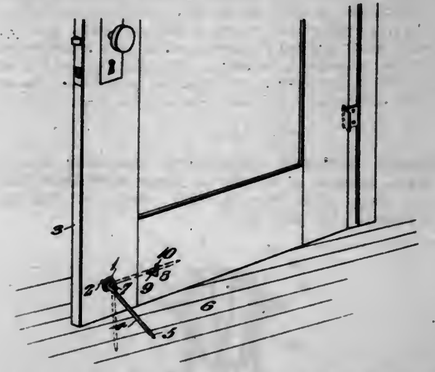
1,482,361. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 5, 1922. Serial No. 558,741. 2 Claims. (Cl. 139—287.)

1. A feeler mechanism for looms having a side slipping feeler which is provided with a main feeler tip having teeth which normally engage the filling in the shuttle on a detecting beat, and an auxiliary tip having teeth which engage the filling on a detecting beat only in case the main feeler tip fails to hold the feeler from said-slipping movement as the lay beats up, means for securing the auxiliary tip in fixed adjusted position relative to the main feeler tip that the teeth of the two tips may extend variable distances rearwardly and means for effecting replenishment of filling when neither feeler tip holds the feeler from slipping longitudinally along the filling carrier on a detecting beat.

1,482,362. ELBOW FOR WIRING CONDUITS. JOSEPH A. VOLK, Jr., Norwalk, Conn., assignor to The Veco Mfg. Company, a Corporation of Connecticut. Filed Aug. 1, 1922, Serial No. 578,974. Renewed Dec. 18, 1923. 7 Claims. (Cl. 247—31.)



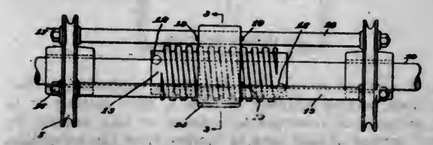
1. An elbow for connecting wiring-conduits having an opening through its side for access to its interior, the plane of the mouth of said opening beginning on the outside of the elbow near the bend and inclining inwardly towards the point of the elbow.



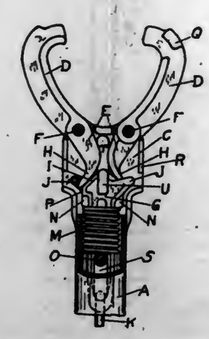
1,482,363. LEATHER-TEMPERING MACHINE. WALLACE C. WRIGHT, Brookfield, N. H., WILLIAM J. YOUNG, Peabody, and GEORGE B. GROVER, Lynn, Mass., assignors, by mesne assignments, to American Shoe Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed July 30, 1919, Serial No. 314,378. Renewed June 26, 1923. 8 Claims. (Cl. 91—17.)

1. A sole flexing machine having, in combination, two endless belts between which the soles are supported, breaker rolls over which the belts pass to flex the soles, and means for holding the belts in operative relation to, but out of engagement with, each other at predetermined parallel portions.

6. A sole flexing machine having, in combination, two endless belts defining a tortuous path along which the sole is carried in the tempering process, a receiving throat at the beginning of said tortuous path, a table, a magazine mounted thereon and including an endless conveyor belt for feeding the soles from the magazine, means for driving said endless conveyor belt and said two endless belts at substantially equal surface speeds, and tempering fluid spraying means located between the endless conveyor belt and said receiving throat.



1,482,364. DOORCHECK. EDGAR E. YOUNG, Philadelphia, Pa.; Alice S. Young, Philip J. Mitchell, and The Pennsylvania Company executors of said Edgar E. Young, deceased. Filed Sept. 8, 1921. Serial No. 499,271. 2 Claims. (Cl. 292—338.)



1. In a door check, an eye, a screw threaded shank carrying the same, a freely pivotal leg on said eye, and a ledge, a screw threaded shank carrying the latter, said shanks providing means for connecting the said leg and ledge independently of each other on a door, and adjusting them separably on the latter.

1,482,365. AUTOMATIC EQUALIZER FOR BRICK-SETTING CRANES. JULIUS H. BACH, Chicago, Ill., assignor to American Equipment Company, Chicago, Ill., a Corporation of Ohio. Filed Nov. 1, 1920. Serial No. 420,940. 1 Claim. (Cl. 242—158.)

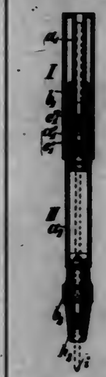
In an equalising attachment for brick setting cranes and the like, the combination of a non-rotatable shaft, a worm rigidly mounted thereon, a frame including a plurality of sheaves rotatably and slidably mounted on said shaft, a nut carried by said frame and associated with said worm, whereby, when the sheaves are rotated, the frame will be moved longitudinally of said worm.

1,482,366. ANIMAL-LEADING DEVICE. ALBERT H. NELLER, Fairfield, Iowa, assignor to The Louden Machinery Company, Fairfield, Iowa, a Corporation of Iowa. Filed July 14, 1922. Serial No. 575,071. 10 Claims. (Cl. 119—154.)

1. In an animal leading device, an elongated tubular staff, a pair of mating castings secured to one end of the staff on opposite sides thereof, a pair of co-acting grappling hooks pivoted on opposite edges of and within said castings; a handle secured to the opposite end of the tubular staff, a longitudinally movable member within said tubular staff having one end extended to the handle on the staff, and the other end connected to the grappling hooks and adapted to be rapidly moved in opposite directions to alternately open and close said hooks and means to normally hold said member in the position it assumes when the hooks are in closed position, substantially as set forth.

1,482,367. PRODUCTION OF CARBON DIOXIDE. HARVEY G. ELLEDGE, Bethel Township, near Pittsburgh, Pa. Filed Dec. 28, 1922. Serial No. 609,513. 14 Claims. (Cl. 23—5.)

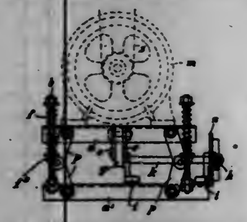
1. A composition for the production of carbon dioxide comprising an alkali-metal bicarbonate and a neutral calcium salt.



1,482,368. OPERATION OF FIRE EXTINGUISHERS, ETC. HARVEY G. ELLEDGE, Bethel Township, near Pittsburgh, Pa. Filed Dec. 28, 1922. Serial No. 609,512. 6 Claims. (Cl. 23—5.)

1. The improvement in the operation of fire extinguishers which comprises supplying to the fire extinguisher sodium bicarbonate and calcium chloride and causing the same to react in the presence of the water in the extinguisher.

1,482,369. PROTECTING DEVICE FOR TWIST DRILLS. JOHANN KRUSCHITZKI, Breslau, Germany. Filed Jan. 30, 1922. Serial No. 532,825. 2 Claims. (Cl. 77—55.)

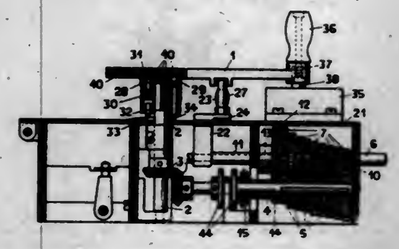


1. An improved device for protecting twist drills against breaking designed to be inserted with the drill into the boring machine comprising in combination two not slitted tubular parts adapted to be screwed together, an inner conical surface with adjacent enlargement in each tubular part, clamping sleeves for holding the drill accommodated and well protected in the hollow space formed by said enlargement of the two tubular

parts, conically tapered slit ends of said clamping sleeves acted upon by said conical surfaces of the tubu-

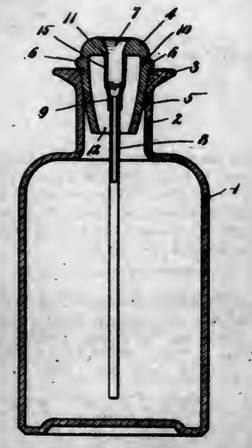
lar parts when said tubular parts are being screwed together so that the drill is clamped and a rigid element independent of the boring machine is formed.

1,482,370. MOTOR BELT-TENSIONING APPLIANCE. PAUL SPILGER, Frankfort-on-the-Main, Germany. Filed Aug. 29, 1921. Serial No. 496,609. 3 Claims. (Cl. 64—52.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



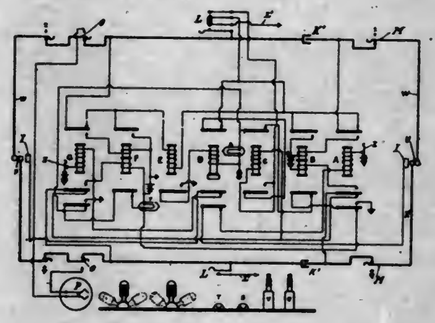
2. An improved support for a motor to maintain a proper tension in a motor driving belt, arranged vertically or nearly so, and for releasing the belt from tension when not in operation comprising in combination an upper and a lower base member, screwed bolts for connecting said members, springs on said bolts for carrying the upper base, and links connecting the upper and lower base members to prevent the motor from tilting under the effect of the one-sided belt pull, and a lever and weight for operating the device for tensioning the belt.

1,482,371. SAFETY RAZOR AND STROPPER. LAWRIE L. WITTER, Hartford, Conn. Filed Dec. 12, 1922. Serial No. 606,380. 21 Claims. (Cl. 30—12.)



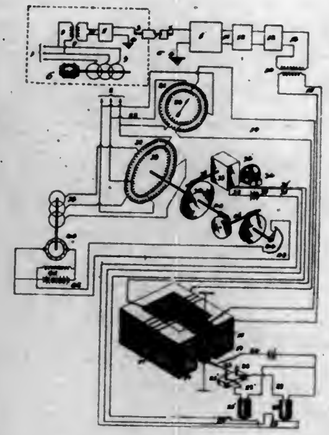
1. A blade holder comprising a relatively thin flexible plate adapted to engage one side of a safety razor blade, means cooperating with the plate and adapted to engage the opposite side of the blade to hold the blade clamped therebetween, and means at the ends of the holder for supporting the same for pivotal movement about the central longitudinal axis of the blade held therein, the plate with a blade held thereby being adapted to bodily flex to the shape of the razor clamping surface therefor.

1,482,372. CALCULATING MACHINE. TOBIAS BÄUERLE, Schwarzwald, Germany. Filed Jan. 25, 1923. Serial No. 614,832. 6 Claims. (Cl. 235—75.)



6. Calculating machine of the Thomas type, comprising a driving shaft and a radially displaceable driving crank, means for resiliently fixing said crank in several radial positions, a spring actuated locking pin connected with said crank serving for locking it on its driving shaft during rotation, but releasing it after each rotation, an intermediate shaft positively connected with said crank so as to be shifted axially when said crank is displaced radially, a plurality of gear wheels of different diameters on said intermediate shaft, means for selectively coupling said wheels with said shaft, a transmission shaft and gear wheels fixed to said transmission shaft and meshing permanently with the gear wheels on said intermediate shaft, and counting mechanism in operative connection with said transmission shaft.

1,482,373. STOPPER. WILLIAM M. LATREMORE, Boston, Mass., assignor of one-half to James H. Wallace, Boston, Mass. Filed Mar. 16, 1922. Serial No. 544,078. 2 Claims. (Cl. 215—52.)



1. A stopper of the kind described, comprising a hollow neck portion adapted to form a tight closing fit in the entrance of a receptacle, a flange or ring around the upper portion of said neck to further close the receptacle, a top portion having therein a depression adapted to receive a pen to be filled, a resilient non-injurious sac for the reception of the point of the pen to be filled, a downwardly extending tube secured to said sac, and air receiving or discharging means in said stopper to compensate automatically for the withdrawal or replacement of ink in said receptacle.

1,482,374. CORD CIRCUIT. ARTHUR J. SEYMOUR, St. Paul, Minn., assignor to Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 13, 1919, Serial No. 270,799. Renewed Nov. 4, 1922. Serial No. 599,150. 16 Claims. (Cl. 179—42.)

1. In a telephone system, the combination with called and calling subscribers' lines, a central exchange in connection with certain of said lines and a current source at said exchange; of a cord circuit including calling and answering plugs for interconnecting said lines, a current supply, means including a circuit responsive to connection of said answering plug with a subscriber's line for conecting said current supply across said cord circuit and means in said cord circuit operated by the connection of said calling plug with a certain one of said lines for simultaneously cutting off the current supply across said cord circuit and cutting in the current source from said central exchange.

1,482,375. MEANS FOR EFFECTING PHASE ADJUSTMENT OF ELECTRICAL SYSTEMS. FREDERICK EUGENE PERNOT, London, England, and LESTER JACOB RICH, The Eastern Telegraph Company Limited, Malta. Filed Feb. 15, 1923. Serial No. 619,261. 3 Claims. (Cl. 172—293.)

1. The combination with a plurality of sources of alternating E. M. F. of which at least one is controlled by another and is dependent thereon, of means for maintaining synchronism and controlling the relative phase position of the E. M. Fs. which comprises, an alternating current galvanometer, having a field winding energized by the dependent source and a coil energized by the controlling source, a phase shifting transformer connected between the dependent source and the galvanometer field winding, and means whereby said galvanometer controls the phase shifting effect of said transformer.

Disclaimer.

1,434,356.—*Henry T. Doulett*, Brockton, Mass. EYELETING MACHINE. Patent dated October 31, 1922. Disclaimer filed January 22, 1924, by the assignee, *United Shoe Machinery Corporation.*

Hereby enters this disclaimer—

"To said claims 3, 4, 5, and 16 of said Letters Patent, which are in the following words, to wit:

"3. A device for setting eyelets in one of a plurality of layers of a flexible material, said device comprising an anvil and a co-operating setting device having a projecting setting-shoulder and a contracted portion above the setting-shoulder.

"4. An eyelet setting device consisting of means for setting eyelets in one of the outside layers of a plurality of layers of material, comprising a lower anvil, an eyelet positioning device and an upper setting device having a slightly projected setting-shoulder and a contracted portion above the setting-shoulder.

"5. The combination of a punching and eyelet setting device for setting eyelets in one or more of the layers of a plurality of layers of material, comprising a punch and a setting device having a projecting setting-shoulder and a contracted portion above the setting-shoulder.

"16. In a machine for setting invisible eyelets in one or more of the layers of a plurality of layers of materials, a die for inserting an eyelet through a hole punched in one or more of said layers, and an upsetting die having a shouldered projection forming a base portion and a reduced portion, the reduced portion being constructed and arranged, during the clenching operation, to extend into said last-named layer or layers while the base portion extends through the other of said layers, said other of said layers being an outer layer, and an upsetting surface formed by the transverse surface of the shoulder between the base and the reduced portion."

Condition of Applications Under Examination at Close of Business January 25, 1924.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

DOREMUS AND BENSER, INC., *v.* JACOBS.

Decided December 15, 1923.

1. TRADE-MARKS—NAME INSEPARABLY ASSOCIATED WITH PATENTED DEVICE.

When the owner of a patent adopts a name for his patented device and so closely associates that name with the device that it becomes inseparable, the right to make, use, and sell the device which vests in the public on the expiration of the patent carries with it the right to employ as descriptive of the patented device the name applied to it by the patentee.

2. SAME—SAME.

This Office should not grant a certificate of registration of a mark which by statute runs for twenty years when that mark consists of the name of a patented device, which patent will expire before the twenty-year registration period and so become free to the public, while the certificate of registration still remains in effect.

ON APPEAL.

TRADE-MARK FOR A PARLOR GAME CONSISTING OF TOY BIRDS, ETC.

Mr. Clarence G. Campbell for Doremus and Benser, Inc.

Mr. George E. Mueller for Jacobs.

FENNING, *Assistant Commissioner:*

Both parties appeal from the action of the Examiner of Interferences holding that neither of the parties is entitled to registration for which each has made application.

Section 7 of the act of 1905 provides that in every case of interference the Examiner of Interferences shall determine the question of the right of registration. On this appeal that duty rests upon me.

The Examiner of Interferences found, among other things, that the mark here in issue is descriptive within the meaning of section 5 of the Trade-Mark Act of 1905.

[1] The specimen labels filed by the parties are substantially identical. The label includes a picture which is a substantial reproduction of the drawing of Patent No. 1,383,610, together with the words "Bang Bird America's Popular Parlor Game," and in a small block the name of the applicants. It is admitted by both parties that "Bang Bird," for which registration is here sought, is the name applied to the game of Patent No. 1,383,610, and, as pointed out by the Examiner of Interferences, it has become as exact a definition of the patented game as are the claims of the patent. There is nothing to show that there is any way of calling for or purchasing the game other than by its name. When the owner of a patent adopts a name for his patented device and so closely associates that name with the device that it becomes inseparable, the right to make use and sell the device which vests in the public on the expiration of the patent carries with it the right to employ as descriptive of the patented device the name applied to it by the patentee. This is so clearly established law that the statement need not be supported by a citation of decisions.

[2] In *Ex parte The Craftsman's Guild*, 143 O. G. 257; 1909 C. D. 91, registration of "Billiken" was refused for a statue on the ground that it was the name applied to the device covered by a patent and also protected by copyright. It seems clear that this Office should not grant a certificate of registration of a mark which by statute runs for twenty years when that mark consists of the name of a patented device, which patent will expire before the twenty-year registration period and so become free to the public, while the certificate of registration still remains in effect. For the reasons set out in the Craftsman's Guild case and the decisions cited therein I am constrained to affirm the decision of the Examiner of Interferences holding that neither party is entitled to registration of the mark.

After the hearing of this appeal a petition was filed to reopen the case and take additional testimony to show that one of the parties had abandoned the mark. This motion is opposed and in view of the conclusion now reached it becomes unnecessary to determine that question.

The motion, therefore, is denied.

The Examiner of Interferences is affirmed.

KRUG *v.* REICHERT.

Decided December 31, 1923.

1. INTERFERENCE—PATENT AND APPLICATION—DISCLAIMER ATTEMPTING TO LIMIT PATENTEE'S CLAIM—ADMISSIONS BY BOTH PARTIES—PATENTABILITY—RIGHT TO MAKE CLAIMS—DISSOLUTION.

Where, in an interference between K., a patentee, and R., an applicant, K. filed a disclaimer for the purpose of limiting his claims and then moved to dissolve, denying R's. right to make the amended claims, and the Law Examiner denied the motion, holding that the disclaimer was only to certain functions and not to any part of the thing patented, whereupon priority was awarded to K., both parties contending that the issue as expressed was not patentable over the art, and R. also contending that he could not make the claims as amended, and where the Examiners in Chief on appeal held the disclaimer ineffective because K's. remedy was only by reissue and affirmed the decision of the Examiner of Interferences, the decision of the Examiners in Chief was vacated by the Commissioner, the interference was dissolved, and the primary examiner was instructed to reject R's. claims on the art cited, since if the disclaimer was ineffective the claims were unpatentable, and if the disclaimer was effective both parties urged that R. could not make the claims.

2. DISCLAIMER ATTEMPTING TO LIMIT PATENTEE'S CLAIM—EFFECT OF.

Where K., a patentee, filed a disclaimer for the purpose of limiting his claims and the disclaimer was held ineffective by both the Law Examiner and the Examiners in Chief, although for different reasons,

Held that if the disclaimer is not technically effective to rewrite the claims, it is effective as an admission against the interests of K.

APPEAL from Examiners in Chief.

ANTISKID DEVICE FOR VEHICLE WHEELS.

Messrs. Williams, Bradbury & See for Krug.
Mr. Hubert E. Peck for Reichert.

FENNING, *Assistant Commissioner:*

Reichert appeals from the action of the Examiners in Chief awarding priority to Krug, the junior party.

The issue is claims 6 to 10 of Krug's Patent No. 1,330,876. Claim 6 reads:

6. Means for securing an anti-skid chain to a vehicle wheel, comprising a bar having an edgewise offset end portion provided with an opening, and a hook formed integral with said end portion and lying in a plane extending at an angle to said bar.

May 11, 1921, Krug filed a disclaimer setting out that the claims of his patent were too broad, including that of which the patentee was not the first inventor, wherefore he enters his disclaimer:

To those parts of claims 6 and 10 of said patent which are in the following words: "A bar having an edgewise offset end portion" except where the edgewise offset end portion provides a clearance space between it and the felly of the wheel, to which said bar is secured, for the passage of a portion of an anti-skid chain; and further enters this disclaimer to those parts of claims 7 and 8 which are, respectively, in the following words: "A bar having an end portion provided with an opening" and "one end of said bar having an opening formed therein," except where said opening is used for securing one end of an anti-skid chain.

The disclaimer was accepted by the Office and printed in the Official Gazette of May 17, 1921.

On May 16, 1921, Krug moved to dissolve on the ground that Reichert could not make the claims, that Reichert could not make the claims as amended by the disclaimer, and that if the claims were construed to include the Reichert construction they were invalid, in view of Patent No. 966,074, Bell. On June 1, Reichert moved to terminate the interference in accordance with *Moore and McKee* v. *Bradley* v. *Doering*, 1912 C. D. 205; 180 O. G. 879; *Manson* v. *Hutchison*, 1914 C. D. 33; 201 O. G. 569; *Fend* v. *Miggett*, 1916 C. D. 9; 223 O. G. 649.

The Law Examiner held that Reichert had the right to make the claims and that the disclaimer by Krug was only to certain functions of the element bar, that in order to avoid a continuance of the interference the subject matter of the counts should be disclaimed. The case then went to final hearing, priority being awarded to Krug. Before the Examiner of Interferences—

both parties contend orally that the issue as expressed by the counts is not patentable over the art as disclosed in the patent to Bell, No. 966,074.

Reichert moved to terminate the interference on the ground that the disclaimer and the contentions of both parties that the original counts were not patentable should cause a dissolution of the interference. The Commissioner denied the petition on the ground that remedy lay through an appeal to the Examiners in Chief. Reichert asked for rehearing before the Examiner of Interferences, which was denied and his appeal to the Examiners in Chief resulted in an award of priority to Krug.

Both parties contend that the counts of the interference are not patentable if in the terms of the Krug patent as issued. Under these circumstances it is clear that the interference should be dissolved under the doctrine of *Slivinski* v. *Lane*, 1922 C. D. 4; 295 O. G. 464.

The Examiners in Chief held that the disclaimer filed here is ineffective under the doctrine set out in *Carnegie Steel Company* v. *Cambria Iron Company*, 185 U. S. 403; 22 S. Ct. 698; 46 L. Ed. 968; 99 O. G. 1866; 1902 C. D. 592; that a disclaimer the purpose of which is to reform or alter the description of the invention, or convert the claim from one thing into something else is objectionable, since patents can only be amended for mistakes of this kind by a reissue.

[1, 2] It is argued by the Examiners in Chief that since the disclaimer is ineffective to limit the claims, the interference must proceed for the reason that the Law Examiner has held Reichert entitled to make the claims. This view overlooks the additional consideration that both parties allege that the claims are unpatentable. If the disclaimer is ineffective, the claims are unpatentable. If the disclaimer is effective, both parties urge that Reichert cannot make the claims. Under these circumstances it is clear that nothing will be accomplished by proceeding to determine the moot question of priority, since under no circumstances can a patent be issued to Reichert for the counts of the present interference. It is unnecessary, therefore, for us to determine the effect of the disclaimer, although it does seem clear that no court will ever hold Krug entitled to the claims in issue given an interpretation broader than that set out in his disclaimer. If the disclaimer is not technically effective to rewrite the claims, it certainly is effective as an admission against the interest of Krug.

The decision of the Examiners in Chief is vacated, the interference is dissolved, and the Primary Examiner is instructed to reject the counts of the interference to Reichert on the patent to Bell, No. 966,074.

PLOUGH CHEMICAL COMPANY *v.* BULLION.

Decided January 8, 1924.

1. TRADE-MARKS—OPPOSITION—GEOMETRICAL FIGURES—COLORS—NOT DECEPTIVELY SIMILAR.

Where the applicant's goods are put up in packages which are in common use for other similar goods in the trade and the testimony is clear that dealers handling the goods find no confusion between the two packages, *Held* that the applicant's mark consisting of a rectangle divided by two diagonals into four triangles, the upper and lower triangles being white and the right and left triangles being red, is not deceptively similar to opposer's mark, consisting of a rectangle which a single diagonal divides into two parts, the upper of which is black and the lower of which is white.

2. SAME—SAME—"RED AND WHITE"—"BLACK AND WHITE"—NOT DECEPTIVELY SIMILAR—CONFUSION AMONG WHOLESALERS—CARELESSNESS.

Where there was some showing of confusion among wholesalers with respect to the names "Red and White" and "Black and White," but it appeared that the confusion arose partially from the fact that orders were taken for "B and W" or "R and W," or through negligence on the part of employees, the opposition was not sustained.

3. SAME—SAME—DISHONEST METHODS AND CARELESS PURCHASERS.

Where the testimony indicated that at least one package of "Red and White" was sold when "Black and White" was asked for, but it did not appear that the consumer looked at the package when purchased, or was deceived, *Held* that when one thing is asked for almost anything may be wrapped up and delivered, but it is not such dishonest methods that can be prevented or such careless purchasers that can be protected by distinguishing trade-marks.

4. SAME—FAMILIAR THINGS EASIER TO DISTINGUISH.

In trade-marks as in matters of life generally it is easier to distinguish between two things which are both strange and new.

5. SAME—OPPOSITION—REMOVAL TO RIVAL'S CITY—ADOPTION OF NEW MARK MORE NEARLY RESEMBLING HIS.

Where B. sold goods under the name "Bullion" for several years and then moved to opposer's city and found "Black and White" on the market, and being dissatisfied with his mark "Bullion" he adopted "Red and White" in addition to his old mark, *Held* that he was justified in this, especially, as he originally selected "Red, White and Blue," but was advised by his counsel to omit the blue, since the three colors had a national governmental significance.

APPEAL from Examiner of Interferences.

TRADE-MARK FOR CERTAIN TOILET AND PHARMACEUTICAL PREPARATIONS.

Mr. E. W. Bradford for Plough Chemical Company.
Mr. John W. Farley and *Mr. C. L. Parker* for Bullion.

FENNING, *Assistant Commissioner:*

Bullion appeals from the action of the Examiner of Interferences sustaining two oppositions to the registration of his trade-marks. One of applicant's marks is "Red and White," which opposer says should be refused registration in view of opposer's use and ownership of "Black and White."

Applicant's other mark consists of a rectangle divided by two diagonals into four triangles, the upper and lower triangles being white and the right and left triangles being red. Opposer contends this should not be registered as being too near its mark, which consists of a rectangle which a single diagonal between the upper right and lower left corners divides into two parts, the upper of which is black and the lower of which is white.

The goods involved are substantially the same and include miscellaneous toilet articles, such as talcum powder, hair dressing, cold creams, etc., the great bulk of which is purchased and used by women.

The applicant moved to dismiss the oppositions, and on appeal I denied the motion on the ground that the marks were not so clearly different that confusion was impossible.

We now have before us a printed record of 294 pages, consisting of testimony taken here as well as testimony taken in open court in a suit for unfair competition brought by the Plough Company against Bullion, in the chancery court of Shelby County, Tennessee. We are not advised as to the outcome of that suit, but apparently it did not result in a judgment for either party.

[1] It is urged here that the parties put their goods in similar packages and dress them the same. It is clear, however, that applicant at least uses stock containers selected from catalogues and not specially made for him, and that his goods are put up in packages which are common for other similar goods in the trade. Moreover, the testimony is clear that dealers handling the goods find no confusion between the two packages. This testimony satisfies me that in fact applicant's mark consisting of two red triangles and two white triangles is not deceptively similar to opposer's mark, consisting of two black and two white triangles.

Hall testifies for Plough Company:

Int. No. 30: How about the colors as they appear in the stock room? Are they clearly distinguishable one from the other, or otherwise?
Ans. Int. No. 30: Yes, sir; they are different, very different as to color.
Int. No. 31: In a poorly lighted stock room can you easily distinguish the Red and White from the Black and White?
Ans. Int. No. 31: Yes, sir; I imagine you could.

[2] There is some showing of confusion among wholesalers with respect to the names "Red and White" and "Black and White," but it appears that the confusion arose partially from the fact that orders were taken for "B. & W." or "R. & W." or through negligence on the part of employees.

Quick testifies for Plough Company:

Int. No. 14: To what were these errors attributable?
Ans. Int. No. 14: Well, they can be attributed to two or three causes,—the order clerk up stairs having more calls for Black and White than he does Red and White, just reads it in a hurry and puts in Black and White where the man will want Red and White; that is one of the main causes.
Int. No. 15: Now, do you regard the similarity of names as one of the causes for such errors?
Ans. Int. No. 15: The similarity of the names as a whole would leave room for no doubt, but down there where we are pressed for time we abbreviate quite extensively,—we don't write the "Black and White" out, we generally write "B. & W." and on the Red and White we write "R. & W." and that is where the errors come in.

[3] There is testimony indicating that at least one package of "Red and White" was sold when "Black and White" was asked for, but it does not appear that the consumer looked at the package when purchased or was deceived. It is admitted that when one thing is asked for, almost anything may be wrapped up and delivered, irrespective of the dress of the goods or the trade-mark applied to them, but it is not such dishonest methods nor such careless purchasers that can be protected against by distinguishing trade-marks.

It has been shown that with respect to at least some of the goods of the parties here much selective care is adopted to procure goods of the proper color. We may take judicial notice of the fact that women as a rule have color sense and readily distinguish colors. Red being one of the primary colors and being a color which is commonly used and commonly known to everyone, as is black, it seems clearly distinguishable from black. The combination "Red and White" has as separate and distinct an entity from "Black and White" as "John Smith" has from "William Smith."

[4] In trade-marks as in matters of life generally it is easier to distinguish between two things which are familiar than between two things which

are both strange and new. To a chemist "sulphate" and "sulphite" are readily distinguishable, but they are not to the man in the street. "Red" and "Black" are words with which we are familiar from infancy and their distinction is always apparent, even to the uneducated.

The exhibits here indicate that it is common in the trade to employ combined colors in characteristic manners in connection with goods such as those here in issue. Exhibit Record No. 291 shows a red and gold package. Exhibit No. 31, shows a blue and white checkerboard package. Exhibit No. 35 shows black and cream stripes. "Stacomb" shows black and gold stripes. Armand Record No. 120 shows a red and white package surcharged with blue lines.

Since the unfair competition case in the State court brought no relief, and in view of the diversity of packages in the market, and in view of the weakness of the testimony, I am constrained to hold that the Plough Company has not been able to show probability of the confusion which my decision on the motion to dismiss found possible.

[5] It is true that Mr. Bullion sold toilet goods under the name "Bullion" for several years, that he subsequently moved to Memphis and continued that trade, even to the time of taking testimony. In Memphis, where is opposer's place of business, he found "Black and White" on the market. Being somewhat dissatisfied with his Bullion mark, he sought a new mark and adopted "Red and White," in addition to his old one. I think he was justified in this, especially in view of the fact he originally selected "Red, White and Blue," but was advised by his counsel to omit the blue, since the three colors had a national governmental significance.

Trade-mark matters are largely concerned with the ultimate consumer or the final purchaser. The goods here involved are carried by drug stores and department stores; the sales of both parties have been extensive, but no single purchaser has been produced who has testified to confusion of marks; no single purchaser has been produced on whom the goods of one party have been palmed off as the goods of the other, except in a single instance at the pharmacy managed by Mr. Plough, the brother of the president and founder of the opposer company, who testifies that he would not attempt to palm off the goods of one manufacturer for those of another.

The Examiner of Interferences is reversed and the oppositions are dismissed.

U. S. District Court—District of Delaware.

FOAMITE-CHILDS CORPORATION *v.* PYRENE MANUFACTURING COMPANY.

Decided April 28, 1923.

1. PRIMARY EVIDENCE—CERTIFIED COPY OF RECORD.
In the absence of statute so providing the record of a private writing is not primary evidence. It is, of course, self evident that a certified copy of the record is not evidence of a higher grade than the record itself.

2. SAME—RECORDS OF ASSIGNMENTS OF PATENTS.
Revised Statutes section 4898, as amended by act of March 3, 1897 (Comp. Stat. 1916, par. 9444), and Revised Statutes section 892 (Comp. Stat. 1916, par. 1505), the only statutes pertaining thereto, do not make the record of assignments of patents evidence of a primary character.

3. SECONDARY EVIDENCE—PUBLIC RECORD OF PRIVATE DOCUMENT.
A duly-authorized public record of a private document, not made primary evidence by statute, is, however, in that it is presumed to be a true and correct copy of the original, admissible as secondary evidence upon proper foundation being laid.

4. SAME—FOUNDATION FOR—RECORD OF ASSIGNMENT OF A PATENT—CERTIFIED COPY.
It is a general rule of law that before a copy of a document may be admitted not only must the destruction, loss, or unavailability for other reasons of the original be first proved, but the execution of the original must also be established in the same manner as if the original were produced. This rule is applicable to the record of an assignment of a patent and to a certified copy of such record.

5. SAME—SAME—ASSIGNMENT OF PATENT—STATUTORY PROVISIONS.
It cannot be held that the certificate of acknowledgement of an assignment of a patent is prima facie evidence of the execution of such assignment, as provided by the statute (29 Statute, 692), unless the assignment is acknowledged before one of the officers specified by the statute. It is equally obvious that a copy of the original cannot be stronger evidence of the execution of an assignment than is the original.

6. ASSIGNMENT OF PATENT—ACKNOWLEDGMENT NOT BEFORE STATUTORY OFFICER.
Where none of the three assignments upon which plaintiff's claim of title rested was acknowledged before one of the statutory officers and the execution of two of those assignments was not made to appear aliunde, *Held* that there was before the court no evidence of plaintiff's title and, without considering the remaining questions presented, the motion for preliminary injunction was denied.

Messrs. Jeffery, Kimball & Eggleston for the Foamite-Childs Corporation.

Mr. Charles Neave for Pyrene Manufacturing Company.

MORRIS, *J.:*

In this suit in equity, instituted by Foamite-Childs Corporation against Pyrene Manufacturing Company for alleged infringement of Patent No. 858,188 for improvement in hand fire-extinguishing apparatus, a motion for preliminary injunction has been heard upon bill, answer, affidavits and exhibits. The defendant, resisting the motion, contends that the evidence with respect to the title to the patent, validity of the patent or infringement by defendant is not sufficient to warrant the granting of plaintiff's motion and further that the evidence discloses that the granting of an injunction will damage defendant more than it will benefit the plaintiff.

[1, 2] The plaintiff claims title from Laurent, the patentee, under and by virtue of three several assignments. The originals of the first two were not produced. In lieu thereof duly certified copies of the Patent Office record of the alleged assignments were presented. In the absence of statute so providing the record of a private writing is not primary evidence. *Ruggs* v. *Tayloe*, 9 Wheat. 483; *Brooks* v. *Marbury*, 11 Wheat. 78, 82; *Griffin et ux.* v. *Reynolds*, 17 How. 609; *Longworth* v. *Close*, Fed. Cas. 8489. It is, of course, self evident that a certified copy of the record is not evidence of a higher grade than the record itself. Revised Statutes section 4898, as amended by act of March 3, 1897 (Comp. Stat. 1916, par. 9444) and Revised Statutes section 892 (Comp. Stat. 1916, par. 1505), the only statutes in any wise pertaining thereto, do not make the record of assignments of patents evidence of a primary character. *Johnston* v. *Southern Well Works Co.*, 208 Fed. 145, C. C. A. 5; *Eastern Dynamite Co.* v. *Keystone Powder Mfg. Co.*, 164 Fed. 47; *American Graphophone Co.* v. *Leeds and Catlin Co.*, 140 Fed. 981; *National Cash Register Co.* v. *Navy Cash-Register Co.*, 99 Fed. 89; *Mayor, etc., of City of New York* v. *American Cable Ry. Co.*, 60 Fed. 1016, C. C. A. 2; 67 O. G. 1334; *Paine* v. *Trask*, 56 Fed. 233, C. C. A. 1, and see *Griffin et ux.* v. *Reynolds*, 17 How. 609, 611. I have examined the cases of a contrary tenor of which the best considered, probably, is *Standard Elevator Co.* v. *Crane*, 76 Fed. 767, 789; 77 O. G. 811, but they are not convincing and I cannot follow them.

[3, 4, 5] A duly-authorized public record of a private document, not made primary evidence by statute, is, however, in that it is presumed to be a true and correct copy of the original, admissible as secondary evidence upon proper foundation being laid. It is a general rule of law that before a copy of a document may be admitted not only must the destruction, loss or unavailability for other reasons of the original be first proved but the execution of the original must also be established in the same manner as if the original were produced. *Shrowders* v. *Harper*, 1 Harr., Del. 444, 22 C. J. 1042. This rule is applicable to the record of an assignment of a patent and to a certified copy of such record. *Mayor, etc., of City of New York* v. *American Cable Ry. Co.*, 60 Fed. 1016, C. C. A. 2. Three years after the decision of that case Congress, in apparent acquiescence in the principle there enunciated, passed an act providing:

> If any such assignment, grant, or conveyance of any patent shall be acknowledged before any notary public of the several States or Territories or the District of Columbia, or any commissioner of the United States circuit court, or before any secretary of legation or consular officer authorized to administer oaths or perform notarial acts under section seventeen hundred and fifty of the Revised Statutes, the certificate of such acknowledgement, under the hand and official seal of such notary or other officer, shall be prima facie evidence of the execution of such assignment, grant or conveyance. 29 Stat. 692, S. 391, par. 5 (Comp. Stat. 1916, par. 9444).

Obviously it cannot now be held that the certificate of acknowledgement of an assignment of a patent is prima facie evidence of the execution of such assignment unless the assignment is acknowledged before one of the officers specified by the statute. It is equally obvious, I think, that a copy of the original cannot be stronger evidence of the execution of an assignment than is the original.

As none of the three assignments upon which plaintiff's claim of title rests was acknowledged before one of the statutory officers and as the execution of two of those assignments has not been made to appear aliunde there is before me no evidence of plaintiff's title. I am, therefore, constrained to conclude, without considering the remaining questions presented, that the motion for a preliminary injunction must be denied.

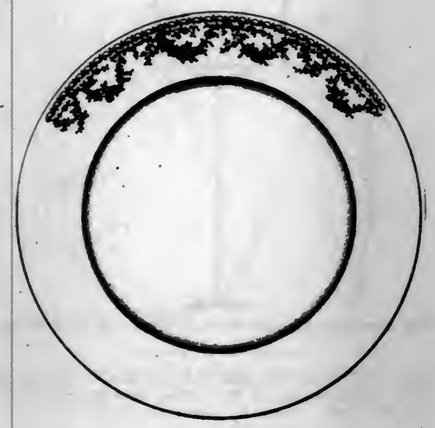
63,894. DISH. BONIFACE A. GRASBERGER, Richmond, Va. Filed Nov. 17, 1922. Serial No. 4,820. Term of patent 14 years.

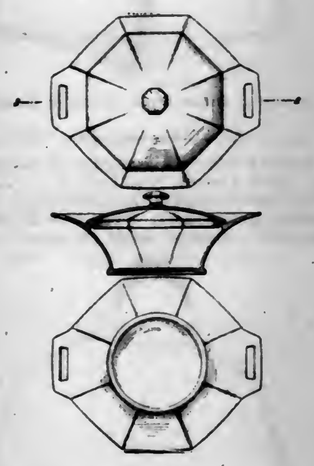
The ornamental design for a dish as shown.

63,895. DISH. BONIFACE A. GRASBERGER, Richmond, Va. Filed July 16, 1923. Serial No. 6,785. Term of patent 14 years.



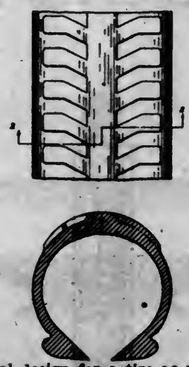
The ornamental design for a dish as shown.

63,896. DOLL. KATHLEEN WATT HARSHBERGER, Wauwatosa, Wis. Filed Oct. 13, 1923. Serial No. 7,487. Term of patent 7 years.



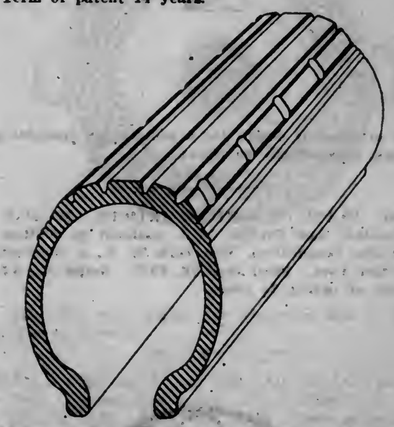
The ornamental design for a doll, as shown.

63,897. PLATE OR SIMILAR ARTICLE. WILLIAM D. HAVILAND, Limoges, France, assignor to Theodore Haviland & Co., New York, N. Y., a Firm. Filed Feb. 24, 1922. Serial No. 885. Term of patent 14 years.



The ornamental design for a plate or similar article, as shown.

63,898. BOWL OR SIMILAR ARTICLE. WILLIAM D. HAVILAND, Limoges, France, assignor to Theodore Haviland & Co., New York, N. Y., a Firm. Filed May 24, 1922. Serial No. 2,402. Term of patent 14 years.

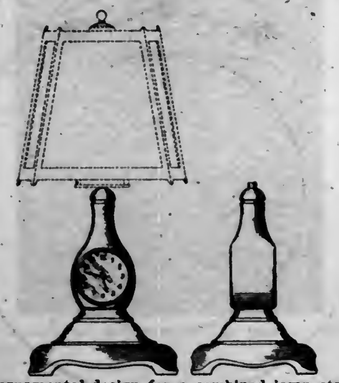


The ornamental design for a bowl, or similar article, as shown.

63,899. TIRE. ROBERT T. HOWES, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 24, 1922. Serial No. 3,185. Term of patent 14 years.

The ornamental design for a tire as shown.

63,900. TIRE. HOMER J. HOYT, Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Nov. 9, 1923. Serial No. 7,727. Term of patent 14 years.

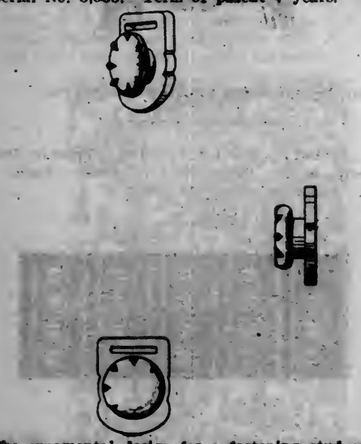


The ornamental design for a tire as shown.

63,901. PLATE OR SIMILAR ARTICLE. ROBERT SCOTT KERR, Chicago, Ill., assignor to Christopher H. Ueberroth, Chicago, Ill. Filed Aug. 2, 1923. Serial No. 6,929. Term of patent 7 years.

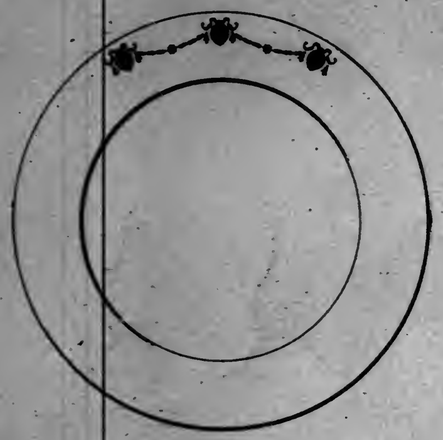
The ornamental design for a plate or similar article, as shown.

63,902. COMBINED LAMP STAND AND CLOCK. STEPHEN KRONBURGER, Hoboken, N. J., assignor to Melita White Metal Casting Co., New York, N. Y., a Copartnership consisting of John Exposite, Joseph Mifsud, Paul Mifsud, and Lorenzo Micallef. Filed Apr. 7, 1923. Serial No. 5,713. Term of patent 3½ years.



The ornamental design for a combined lamp stand and clock as shown.

63,903. LOCKET OR SIMILAR ARTICLE OF JEWELRY. ALVIN LANG, San Francisco, and Edward H. FORESTIER, San Mateo, Calif. Filed Dec. 13, 1922. Serial No. 4,585. Term of patent 14 years.



The ornamental design for locket, or similar article of jewelry, as shown.

63,904. FASTENING STUD OR BUTTON. ERNEST ALFRED LILLIE, Leicester, England. Filed Aug. 23, 1922. Serial No. 3,535. Term of patent 7 years.

The ornamental design for a fastening stud or button as shown.

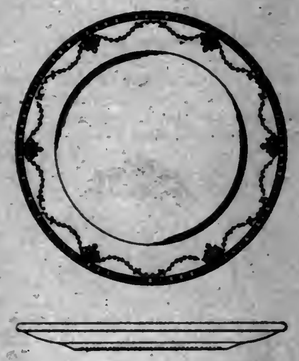
63,905. PLATE OR SIMILAR ARTICLE. RANDOLPH E. LUKENS, Syracuse, N. Y., assignor to The Iroquois China Company, Syracuse, N. Y. Filed Apr. 10, 1923. Serial No. 5,772. Term of patent 7 years.

The ornamental design for a plate or similar article as shown.

63,906. HEATER. JOHN E. MCMINN, Louisville, Ky., assignor to Peerless Manufacturing Company, Louisville, Ky., a Corporation of Kentucky. Filed Oct. 10, 1923. Serial No. 7,466. Term of patent 7 years.

The ornamental design for heater, as shown.

63,907. ELASTIC WOVEN FABRIC. THOMAS MOORE, Westerly, R. I. Filed Aug. 4, 1923. Serial No. 6,942. Term of patent 14 years.

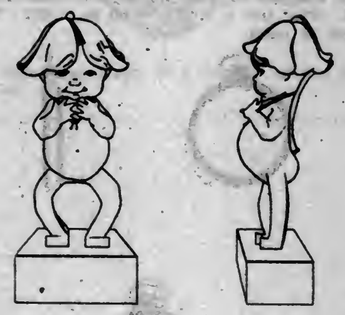


The ornamental design for elastic woven fabric, as shown.

63,908. RADIANT FOR OPEN-FIRE GAS HEATERS. GEORGE E. PICKUP, Newark, Ohio, assignor to The Wehrle Company, Newark, Ohio, a Corporation of Ohio. Filed July 27, 1923. Serial No. 6,875. Term of patent 7 years.

An ornamental design for a radiant for open-fire gas heaters, substantially as shown.

63,909. PLATE OR SIMILAR ARTICLE. WILLIAM S. PITCAIRN, East Orange, N. J., assignor to William S. Pitcairn Corporation, New York, N. Y., a Corporation of New York. Filed June 16, 1923. Serial No. 6,515. Term of patent 3½ years.



The ornamental design for a plate or similar article as shown.

63,910. COVERED DISH OR SIMILAR ARTICLE. WILLIAM S. PITCAIRN, East Orange, N. J., assignor to William S. Pitcairn Corporation, New York, N. Y., a Corporation of New York. Filed June 16, 1923. Serial No. 6,514. Term of patent 3½ years.

The ornamental design for a covered dish or similar article as shown.

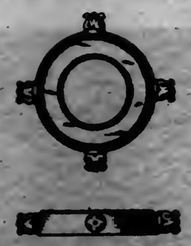
63,911. STATUETTE OR SIMILAR MINIATURE FIGURE. GEORGIA ALLEN POST, Forest Hills, N. Y. Filed June 5, 1923. Serial No. 6,390. Term of patent 14 years.

The ornamental design for a statuette or similar miniature figure as shown and described.

63,912. SAFETY PAPER. HARRY A. PRIZER, Philadelphia, Pa., assignor to William Mann Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 28, 1922. Serial No. 3,577. Term of patent 14 years.

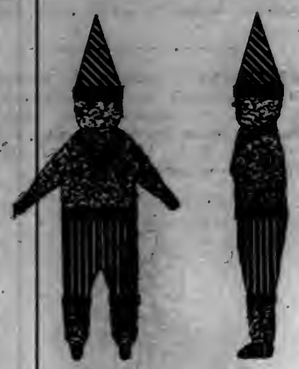
The ornamental design for safety paper, substantially as shown.

63,913. STATUETTE. GEORGE H. ROBERTS, Providence, R. I., assignor to Freeman-Daughaday Co., Chartley, Mass., a Corporation of Massachusetts, also doing business as Providence Collar Button Company, Providence, R. I. Filed Sept. 17, 1923. Serial No. 7,227. Term of patent 3½ years.



The ornamental design for a statuette, as shown.

63,914. TEXTILE FABRIC. MAX ROTHSCHILD, New York, N. Y., assignor to Susquehanna Silk Mills, a Corporation of New York. Filed Nov. 20, 1923. Serial No. 7,828. Term of patent 3½ years.

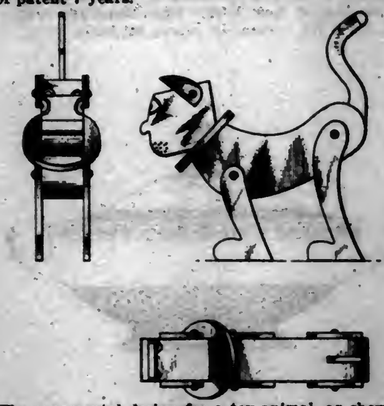


The ornamental design for a textile fabric as shown.

63,915. LAMP-SHADE SUPPORT. EDWARD C. RUTTENBERG, Chicago, Ill. Filed Feb. 3, 1923. Serial No. 5,069. Term of patent 3½ years.

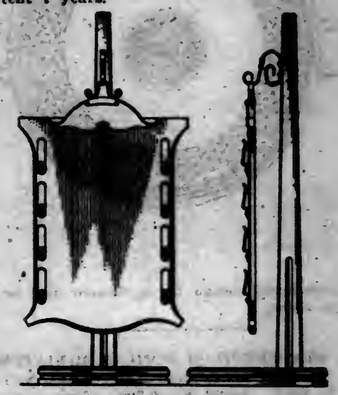
The ornamental design for a lamp shade support as shown.

63,916. DOLL. HENRY M. SAMPSON, Tonkawa, Okla. Filed Jan. 21, 1922. Serial No. 312. Term of patent 14 years.



The ornamental design for a doll, as shown.

63,917. FINGER RING. SAMUEL SCHNELLING, Chicago, Ill. Filed July 15, 1922. Serial No. 3,093. Term of patent 3½ years.

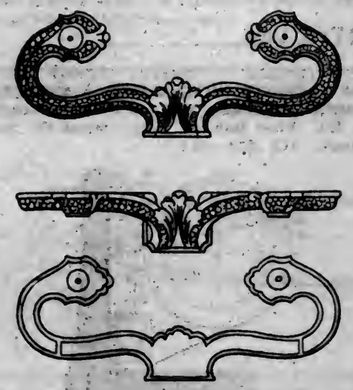


The ornamental design for a finger ring, as shown.

63,918. TOY ANIMAL. WALTER B. SCOTT, Marblehead, Mass. Filed June 5, 1923. Serial No. 6,391. Term of patent 7 years.

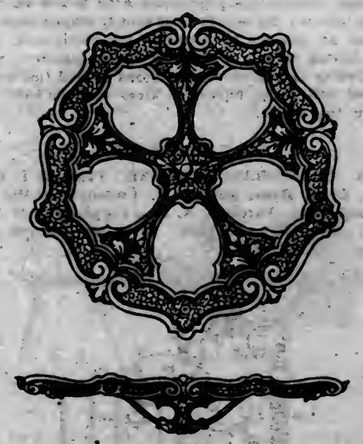
The ornamental design for a toy animal, as shown.

63,919. DISPLAY STAND. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Oct. 19, 1923. Serial No. 7,544. Term of patent 7 years.



The ornamental design for a display stand, as shown.

63,920. WATCHCASE. OTTO A. STARKE, Ludington, Mich., assignor to Star Watch Case Co., Ludington, Mich. Filed Oct. 8, 1923. Serial No. 7,423. Term of patent 14 years.



The ornamental design for a watchcase, as shown.

63,921. TWO-LIGHT ARM FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J. Filed Nov. 6, 1923. Serial No. 7,690. Term of patent 7 years.

The ornamental design for a two light arm for lighting fixtures, as shown.

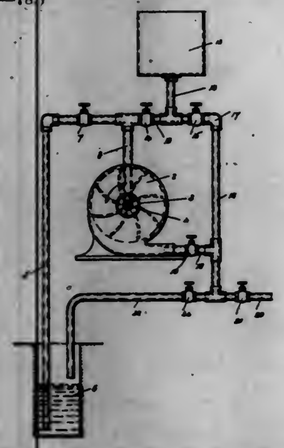
63,922. RING FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J. Filed Nov. 6, 1923. Serial No. 7,694. Term of patent 7 years.

The ornamental design for a ring for lighting fixtures, as shown.

63,923. SPOON OR SIMILAR ARTICLE. WILLIAM S. WARREN, Meriden, Conn., assignor to R. Wallace & Sons Mfg. Co., Wallingford, Conn., a Corporation. Filed July 19, 1923. Serial No. 6,807. Term of patent 7 years.

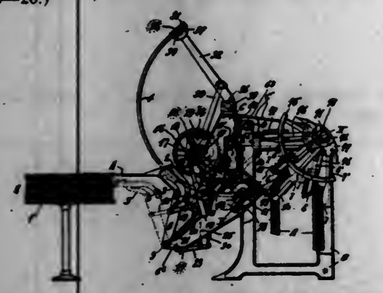
The ornamental design for a spoon or similar article, as shown.

63,924. SPOON OR SIMILAR ARTICLE. FREDERICK RUSSELL WOODWARD, Attleboro, Mass., assignor to The Watson Company, Attleboro, Mass. Filed Feb. 19, 1923. Serial No. 5,212. Term of patent 14 years.



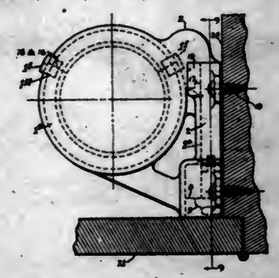
The ornamental design for a spoon, or similar article, as shown.

PATENTS



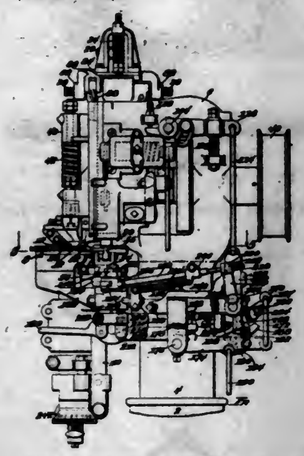
GRANTED FEBRUARY 5, 1924.

1,482,376. PUMP. ALBERT C. ANDERSON, Antonito, Colo. Filed Dec. 28, 1921. Serial No. 525,452. 2 Claims. (Cl. 137—78.)



1. A single pump provided with an inlet pipe and a delivery pipe having a stop valve, a single suction pipe connected to the inlet pipe and also provided with a stop valve, a main pipe connected at one end to the suction pipe and provided with a branch pipe and having two stop valves arranged one on each side of the branch pipe, a storage tank connected to the branch pipe, a supply pipe and a by-pass pipe arranged below the level of the said main pipe and in line with each other and each provided with a stop valve, and a pipe connecting the said main pipe with the delivery pipe of the pump and with the said supply and by-pass pipes between their stop valves.

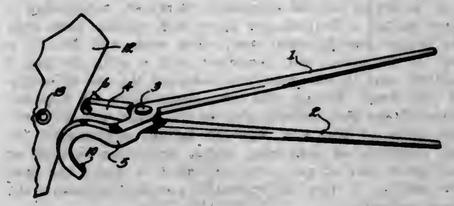
1,482,377. BAG-TURNING MACHINE. BIRNEY C. BATCHELLER, Brooklyn, N. Y., assignor to Bemis Bro. Bag Co., St. Louis, Mo., a Corporation of Missouri. Filed Jan. 16, 1922. Serial No. 529,561. 29 Claims. (Cl. 223—20.)



1. In a bag-turning machine, a bag-holder adapted to secure the mouth of the bag, a pair of bag-turning members having bag-engaging ends adapted to enter the mouth of the bag held by said holder, and means whereby said bag-engaging ends are advanced in curved lines diverging from said bag holder, said means including pivots on which the respective bag-turning members are moved and the axes of said pivots being at an angle to each other.

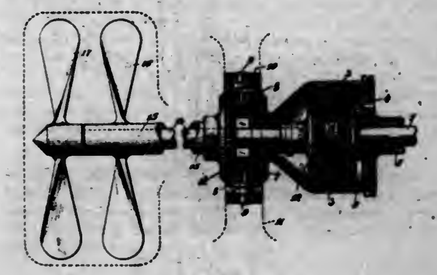
1,482,378. DEPOSIT AND COLLECTION RECEPTACLE FOR MILK BOTTLES. WILLIAM N. BATCHELOR, Baltimore, Md. Filed Mar. 30, 1922. Serial No. 548,200. 7 Claims. (Cl. 232—42.)

1. In a device for receiving and securing milk-bottles, the combination of a member including a U-shaped part and a channel, the U-shaped part being formed with a downwardly converging inner surface for supporting a milk bottle by its mouth-bead, and a second member including a bolt which is mounted to slide in said channel, said second member being provided with means to close the space between the terminals of said U-shaped part and thus form an annulus to surround the bottle-neck, said channel having therein a shoulder for engagement with said bolt so as to lock the device closed around the bottle-neck, said bolt being releasable from said shoulder for unlocking the device.



1,482,379. CHANNELING MACHINE. FREDERIC E. BERTRAND, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 20, 1918. Serial No. 263,389. 56 Claims. (Cl. 12—27.)

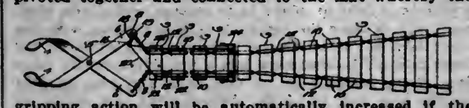
25. In a turn channeling machine of the type in which the edge gage is adjustable and the shoulder knife is removable from cutting position, said adjustment of the edge gage including a movement both toward and from the channel knife and both of said parts being under control



of a single actuating mechanism, the combination with said mechanism of a locking device for holding the shoulder knife in its raised position, said device being actuated into its locking position by the movement of said gage from the channel knife and released by the movement of said gage toward the channel knife.

1,482,380. TONGS. CORRINNE N. BUCHANAN, Everson, Wash., assignor of one-half to L. Daniels, Everson, Wash. Filed Jan. 3, 1922. Serial No. 526,818. 1 Claim. (Cl. 81—3.)

A pair of plow share tongs of the class described, comprising two crossed pivotally joined handles with jaws extending therefrom; one of said jaws being substantially straight, and is adapted, when the tongs are in use, to flatly engage one side of the plow share and having an inwardly projecting stud at its end for extension within an opening in the said plow share; the other of the jaws being adapted to flatly engage the face of the plow share opposite that engaged by the straight jaw, and is of hook form and extends circularly about the opening in the plow share and is provided with an inturned hook at its end for engaging the edge of the share.



1,482,381. PROPULSION MECHANISM. HORACE M. CAKE, Philadelphia, Pa. Filed July 6, 1918. Serial No. 243,523. 4 Claims. (Cl. 115—37.)

1. In a propulsion mechanism in combination, a driving shaft, a transmission head carried on said driving shaft, compensating gears upon said transmission head, a face plate carrying thereon a beveled gear in engagement with the compensating gears, a tubular shaft, a propeller on said tubular shaft, a casing secured to said face plate, reversing gearing operatively connecting said casing and said tubular shaft, a cylindrical shaft mounted within said tubular shaft, a propeller carried upon said cylindrical shaft and a beveled gear on the cylindrical shaft and in engagement with the compensating gears; the driving shaft, the tubular shaft, and the cylindrical shaft, all being in axial alignment.

1,482,382. EXTRICATING DEVICE FOR MOTOR VEHICLES. WALTER C. E. CARLSON, Chicago, Ill. Filed Aug. 19, 1922. Serial No. 582,872. 4 Claims. (Cl. 238—14.)

1. A device for extricating vehicle wheels from the mud, consisting of a mat, and a self-tightening clamp adapted to grip the sides of the wheel, said clamp having lever arms pivoted together and connected to the mat whereby the

gripping action will be automatically increased if the wheel slips on the mat while rotating in forward direction.

1,482,383. SLIDING GLASS WINDOW. ROBERT MARTIN CHAMBERS and JOSEPH JACKSON, Belfast, Ireland. Filed Dec. 29, 1921. Serial No. 525,548. 4 Claims. (Cl. 20—52.1.)

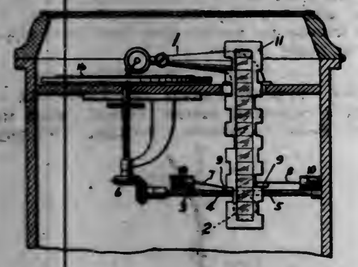
1. The combination with a window casing, of an unframed glass panel slidable vertically in fixed guideways in said window casing, in which the lateral margins of the glass fit closely, whereby the panel has no movement in a direction transversely thereof, a weather-plate pivotally mounted on the window sill on the exterior of the panel, and adapted to bear against the glass as the panel is raised or lowered, said panel having a lip on its exterior and above its lower edge, which lip is adapted to engage said weather-plate when the panel is fully raised, whereby the weather-plate operates to support the panel in raised position.

1,482,384. SPRING CATCH OR FASTENER. JOHN ARTHUR CHAMBERS, Belfast, Ireland. Filed Mar. 31, 1922. Serial No. 548,304. 3 Claims. (Cl. 292—70.)

1. A device for retaining a motor car bonnet in its closed position with the marginal portion of its inner face in contact with an abutment, comprising in combi-

nation a blade spring which is secured at one end upon the inner face of the bonnet and the free end portion of which is curved to adapt it to engage behind the abutment and to draw the bonnet into close contact with the outer face of the abutment, a bevelled projection on the outer face of the abutment, and a projection on the inner face of the bonnet near its free horizontal edge adapted to ride over and, under the action of the said spring, to become engaged under the projection on the abutment.

1,482,385. SHIRT STUD. PHILIP COHEN, Buffalo, N. Y. Filed May 4, 1923. Serial No. 637,718. 8 Claims. (Cl. 24—90.)



1. A shirt-stud of the character described, comprising a pair of spaced arms joined at one end and open at the other end, an outwardly projecting neck formed on the free end of one of said arms for engagement with a button-hole of the outer flap of a shirt and terminating in a stop collar for the latter, and adjustable retaining means mounted on said neck and adapted for movement across the space between said arms for engagement with an alining buttonhole of the inner shirt-flap.

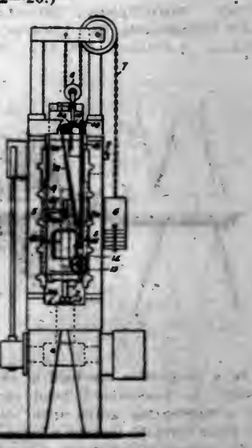
1,482,386. PROCESS FOR MANUFACTURING ARTIFICIAL-SILK THREADS OR OTHER CELLULOSE FIBERS. LEROY SMITH CONVERSE, Wilmington, Del., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 21, 1923. Serial No. 626,598. 6 Claims. (Cl. 18—54.)

2. A process for manufacturing artificial silk threads or other cellulose fibres in which the threads or fibres are subjected to freezing before the first drying operation.

1,482,387. TALKING-MACHINE PICTURE EXHIBITOR. WILLIAM J. DONALDSON, Philadelphia, Pa., assignor to The Visualatone Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 5, 1921. Serial No. 458,825. 2 Claims. (Cl. 88—28.)

1. In a talking machine picture exhibitor the combination of a screw having right and lefthand threads, means for driving the screw in synchronism with the talking machine, opposed movable detents, means for normally projecting the detents and for permitting of their retraction, half nuts carried by the detents, devices for normally holding the half nuts clear of the screw to free the detents for projection and for permitting the nuts to engage the screw to retract the detents, and a picture frame carrying pictures and movable to bring the pictures successively into co-operation with the exhibitor and marginally provided with staggered notches of different depths into which the detents are projected to permit notch top walls to cause the nuts to alternately engage with the screw and from which the nuts are withdrawn by the screw at intervals depending upon the depth of the notches.

1,482,388. CLOTHESLINE LOCK. JOHN JOSEPH DUKET, Toledo, Ohio. Filed Sept. 27, 1920. Serial No. 413,156. 3 Claims. (Cl. 24—133.)

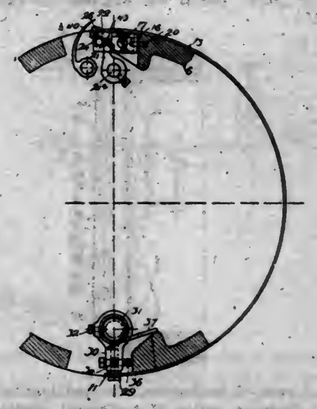


3. A device of the described character, comprising a lever having a hook-shaped upper end, having, also, near its center two laterally projecting lugs, and having a seat in its lower end, combined with a plate having a vertical slot in its upper part adapted for the reception of the lever, having also two screw-holes at opposite sides of the slot, having also in its inner face at opposite sides of the slot, opposed lateral depressions for the reception of said lugs, and a projection formed on the lower end of the plate arranged to enter the seat for holding a line in clamping position adjacent the lever mounting.

1,482,389. PROCESS OF AND MIXTURE FOR MAKING GLASS. ALEXANDER L. DUVAL D'ADRIAN, Washington, Pa. Filed Feb. 10, 1921. Serial No. 444,016. 13 Claims. (Cl. 106—36.1.)

1. A glass-forming mixture containing iron and a chlorine compound adapted to act as an oxidising agent.

1,482,390. FEED MECHANISM FOR BOLT-TURNING AND OTHER MACHINES. JAMES A. EDEN, Jr., Springfield, Mass., assignor to Walter H. Foster, New York, N. Y. Filed May 14, 1921. Serial No. 469,533. 15 Claims. (Cl. 82—20.)

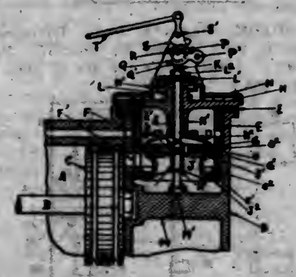


4. A machine of the class described including in combination a tool carrier, feeding means, means for decreasing the effective rate of feed and for automatically stopping the advance of the tool for an interval during which said feeding means continues to operate and means for stopping the operation of said feeding means at the end of said interval and automatically restoring said carrier to its starting position.

1,482,391. CUTTING AND CREASING PRESS. FRED S. ENGLISH, New London, Conn. Filed Feb. 3, 1921. Serial No. 442,096. 10 Claims. (Cl. 101—415.1.)

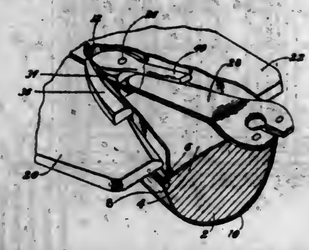
1. In a press the combination with the impression cylinder, of a jacket for the impression portion thereof, a strip secured across the leading edge of the jacket

at the inner surface thereof and having its outer surface curved to conform to the curvature of the cylinder surface, a second strip inside said first strip, means for



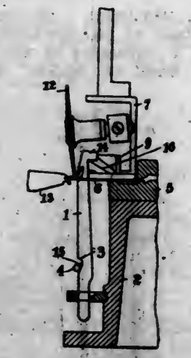
securing said strips together and adapted to permit the strips to be slightly separated to permit make ready to be inserted between the strips.

1,482,392. PROCESS OF MEASURING PISTON RINGS. HARRY S. FRANK, Woodmere, N. Y. Filed Apr. 21, 1920. Serial No. 375,538. 8 Claims. (Cl. 33—179.)



1. The process of measuring the true shape of a split piston ring which comprises compressing the ring to its supposedly correct working size within a rigid receiver havng an opening of the exact size for which the ring is intended, firmly tying a flexible tie around the compressed ring, releasing the tied ring from the rigid receiver and successively measuring the ring's diameters at diametrically opposite points of its circumference.

1,482,393. ENGINE-VALVE MECHANISM. JOHN C. GLENN, Erie, Pa., assignor to Skinner Engine Company, Erie Pa., a Corporation of Pennsylvania. Filed Nov. 15, 1919, Serial No. 338,321. Renewed Oct. 29, 1923. 2 Claims. (Cl. 121—185.)

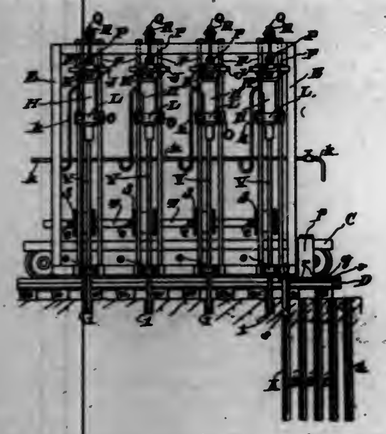


1. In a device of the class described, a chamber having radial steam passages through the wall thereof, an annular shoulder on the inner wall of said chamber above said steam passages, a movable valve seat ring resting on said shoulder, means to yieldingly press said ring against said shoulder, a stationary annular valve seat on the inner end of the wall of said chamber, a cover for said chamber, a double seat valve adapted to seat against said movable valve seat ring and against said stationary annular valve seat, and a valve stem slidably mounted in said cover and secured in said valve.

1,482,394. MACHINE FOR AND METHODS OF SHAPING UPPERS. LEONARD F. GRIFFIN, Binghamton, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 5, 1921. Serial No. 490,072. 15 Claims. (Cl. 12—97.)

1. That improvement in methods of shaping uppers which consists in lasting the upper to a ribbed innersole, and then molding the margin of the upper extending above the rib into an upstanding flange for convenient removal in the upper trimming operation.

1,482,395. SINKER GUIDE FOR KNITTING FRAMES. EMIL HAAGA, Stuttgart, Germany. Filed June 28, 1920. Serial No. 392,463. 6 Claims. (Cl. 66—26.)

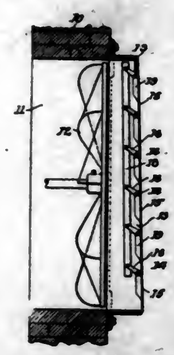


1. A knitting frame comprising in combination, a row of sinkers, a row of hook-shaped bars disposed substantially at right angles to said sinkers, means for causing said bars to act on the yarn in two directions substantially at right angles to one another and means for causing said bars to act singly, one after the other, and independently of said sinkers.

1,482,396. APPARATUS FOR CHANNELING ROCK. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, New York, N. Y., a Corporation of New Jersey. Filed July 23, 1920. Serial No. 398,374. 2 Claims. (Cl. 255—51.)

1. In a machine for channeling rock, the combination of a traveling carriage, having an upright frame provided with pairs of vertical guide rods, mountings independently slidable on said guide rods, adjustable clamping members on said mountings for holding the cylinder casings of rock drills of the hammer type, a power

driven shaft having winding drums loosely mounted thereon, rope feed connections between the rock drills and the winding drums, independently operable clutch members for connecting the winding drums respectively to the driven shaft, manual clutch levers for each clutch

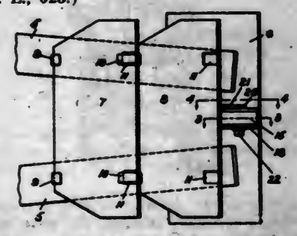


extending forwardly to the front of the machine between the pairs of vertical guide rods, and brakes for the drums also connected to be operated by said clutch levers for holding the drums or permitting downward feeding of the rock drill mountings.

1,482,397. CORE BREAKER. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 13, 1922. Serial No. 567,880. 5 Claims. (Cl. 255—72.)

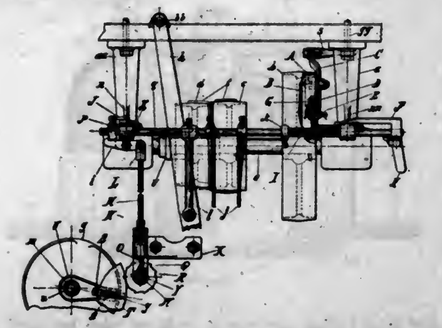
1. In combination, a core drill including a cylindrical core barrel, a shot bit, means for supplying cutting material through the core barrel to the cutting edge of the bit, and a core breaking device located axially within the core drill and including a cutter presenting a horizontally disposed cutting edge, said core breaking device permitting the passage of the cutting material to the bit and being adapted to be mounted above the cutting edge of the shot bit and being capable of breaking or disintegrating the core of material drilled by the shot as the drilling progresses.

1,482,398. SHUTTER MECHANISM. ROBERT A. ILG, Chicago, Ill., assignor to Ilg Electric Ventilating Company, Chicago, Ill., a Corporation of Louisiana. Filed Mar. 3, 1923. Serial No. 622,469. 3 Claims. (Cl 98—27.)



1. In a shutter mechanism, the combination of a rectangular frame, a series of horizontal shutter spindles journaled in and between the vertical sides of said frame, a plurality of sheet metal shutter vanes secured at their upper edge portions to said spindles and at their lower edges overlapping when in closed position, the upper edges of the next shutter vanes therebeneath, and means for effecting simultaneous and equal opening and closing movements of said vanes comprising pockets formed on the rear sides of said vanes, levers mounted on said spindles and each having one arm thereof engaged with one of said pockets, and a link connecting the other arms of said levers.

1,482,399. MAT HOLDER. WILLIAM B. INGLIS, Pawtucket, R. I. Filed June 1, 1922. Serial No. 565,267. 6 Claims. (Cl. 15—217.)



1. A holder for floor mats comprising a frame for embracing the edges of the mat, means secured to the under side of the mat to extend under the edges of said frame, and means for securing the frame to the floor to retain the first named means and mat in its frame.

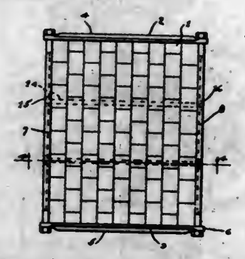
1,482,400. SPADE. BRYAN P. JOYCE, Davenport, Iowa. Filed Sept. 6, 1923. Serial No. 661,267. 10 Claims. (Cl. 89—42.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

8. In a traveling lock for trail spades the combination with a limber, a trail supported on said limber and a spade on said trail, of cooperating means on said trail and limber for locking said spade in traveling position with respect to said trail.

1,482,401. AUTOMATIC STOPPING MECHANISM FOR MACHINE TOOLS. WILLIAM L. KENFIELD, Royal Oak, Mich. Filed Mar. 20, 1919. Serial No. 283,914. 5 Claims. (Cl. 192—139.)

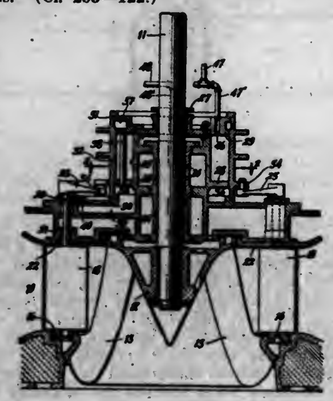
1. Automatic stopping mechanism for a machine tool adapted to automatically perform a series of operations in sequence comprising the combination therewith of a driving element, a power transmitting element between the driving element and the machine tool, a brake applicable to stop movement of the machine tool, manual means for connecting the driving element with the machine tool and simultaneously disengaging the brake, a pawl on the machine tool operating in a ratio of one to one with each sequential operation of the tool, a ratchet having a number of teeth equal to the number of sequential operations of the tool engaged by the pawl once upon each operation, means actuated by the ratchet upon completion of the series of operations to disengage the driving element from the tool and simultaneously apply the brake to prevent an overrun of the machine tool.

1,482,402. FRICTION CLUTCH. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark New Britain, Conn., a Corporation of Connecticut Filed Oct. 20, 1920. Serial No. 418,239. 6 Claims. (Cl. 64—106.)



1. The combination of an outer member having a cylindrical bore, a carrier member rotatable therein, said carrier member having a transverse opening extending therethrough, friction blocks in the ends of said opening, and a single compression spring between said blocks acting on both of them to force them outward into engagement with the inner surface of said bore, the outer and carrier members being adapted to be secured to the shaft ends, said carrier member having a bore extending axially from its inner end forming a chamber connected with said transverse openings and across which said spring extends.

1,482,403. HAIR-WAVING IMPLEMENT. LINNIE E. LEONARD, Cleveland, Ohio. Filed Apr. 13, 1922. Serial No. 552,315. 6 Claims. (Cl. 132—43.)

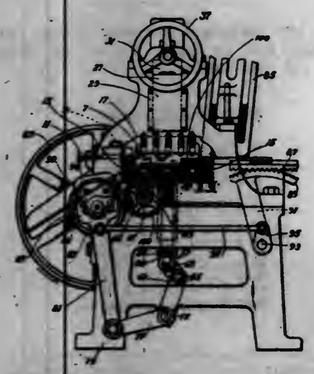


2. A device for producing artificial waves in the hair, comprising a cylindrical rod provided upon one side with a longitudinal groove, a flexible hair crimping element, adapted to be positioned within said groove, handles upon the ends of said rod adapted to extend over the ends of said crimping element and retain the same within said groove, and means adapted for releasing said element from said groove.

1,482,404. DIE BLOCK. RICHARD MILLER, Appleton, Wis. Filed Feb. 10, 1922. Serial No. 535,637. 3 Claims. (Cl. 164—58.)

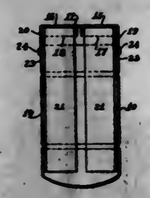
1. A die block comprising a body formed of a plurality of individual blocks, end members extending across the ends of the body from one side to the other, co-operating front and rear channel shaped members, clamping means connecting the end portions of the channel shaped members with the end members and adapted to draw the end members into pressure relation to the ends of the body, and tie rods extending through the body and connecting the channel members with each other at itervals, said tie rods having clamping nuts housed within the channels of the channel members.

1,482,405. OPERATING MECHANISM FOR HYDRAULIC TURBINES. LEWIS FERRY MOODY, Philadelphia, Pa. Filed Nov. 26, 1920. Serial No. 426,371. 14 Claims. (Cl. 253—122.)



1. A turbine having a shaft, a rotary motor surrounding said shaft and control mechanism for said turbine adapted to be actuated from said motor.

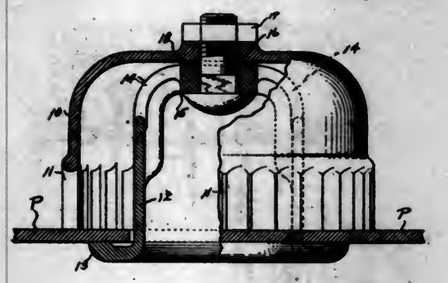
1,482,406. SKIVING MACHINE. JAMES G. NORTON, Eltingville, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Continuation of application Serial No. 274,042, filed Jan. 30, 1919. This application filed Dec. 4, 1920. Serial No. 428,260. 17 Claims. (Cl. 69—13.)



1. A machine of the class described having, in combination, a cutter, a gage member and a feed member for gripping one by one a series of blanks each of which has

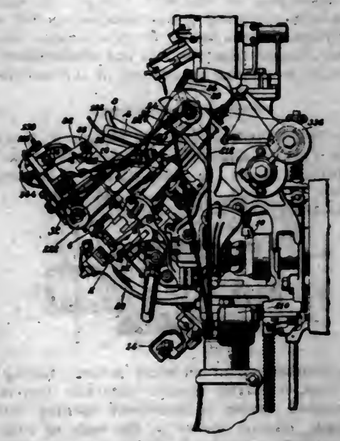
the same thickness difference and directing them to the cutter, operator controlled means for producing relative adjustment between the gage member and the cutter to space them apart a distance equal to the amount of thickness difference, and means for thereafter moving the

feed member toward the gage member to cause each blank to be gripped and fed in such manner that a skiving of uneven thickness and having the same maximum thickness is removed from each blank and passes between the gage member and the cutter.



1,482,407. COSMETIC-PENCIL CASE. CHARLES A. PENNOCK, East Orange, N. J., assignor to Richard Hudnut, New York, N. Y., a Corporation of New York. Filed June 14, 1922. Serial No. 568,174. 7 Claims. (Cl. 132—79.)

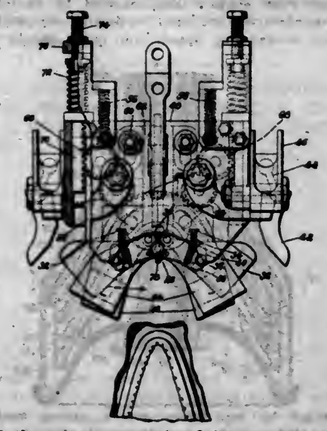
1. A container comprising a case, a cap for said case having openings through the top thereof; and a plurality of similar separate containers each provided with a longitudinal slot and having finger operable means slidably movable in said slot, the finger operable means being movable to the lower end of said slot and each separate container being insertible in said cap and case bottom end upwardly and said finger operable means then cooperating with means appurtenant to the case; each separate container being movable for enclosure in said case and being removable therefrom by operation of said finger operable means and being retained in the case by engagement of said finger operable means with said means appurtenant to the case and engagement of the separate container with said cap.



1,482,408. ABSORPTION DEVICE. EMIL PIRON, New York, N. Y., assignor to Piron Coal Distillation Systems, Inc., New York, N. Y., a Corporation of Delaware. Filed May 29, 1922. Serial No. 564,345. 3 Claims. (Cl. 261—79.)

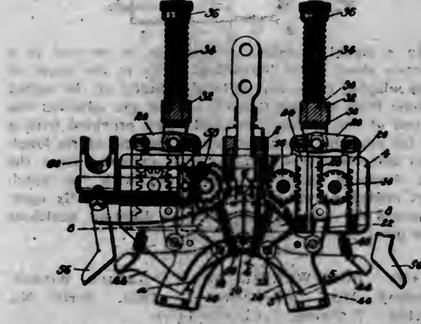
1. In a device of the class described, a plate over which liquid may be passed, a hood above the plate and having its lower edge adjacent the plate, and means to deliver gas from beneath the plate to the interior of the hood,

said hood having openings at its lower edge arranged to cause the gas to flow from the hood into the liquid in a non-radial direction.



1,482,409. MACHINE FOR USE IN THE LASTING OF BOOTS AND SHOES. CHARLES F. PYM and ARTHUR F. PYM, Lynn, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 14, 1919. Serial No. 289,898. 114 Claims. (Cl. 12—4.)

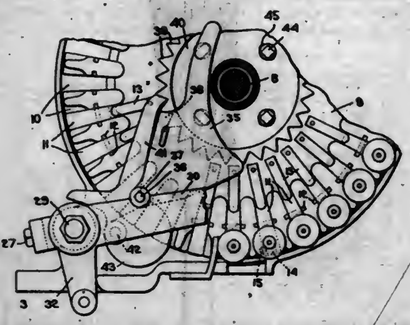
1. In a machine of the class described, the combination with means for applying a lasting binder round the end of a shoe, of automatically controlled means for presenting a binder in position to be operated upon by said binder applying means.



1,482,410. MACHINE FOR SHAPING UPPERS OVER LASTS. CHARLES F. PYM, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 13, 1919, Serial No. 317,302. Renewed Sept. 27, 1922. Serial No. 591,000. 23 Claims. (Cl. 12—14.)

1. In a machine of the class described, the combination with shoe positioning means, of end embracing wipers mounted for closing movement laterally of the shoe, means for moving said wipers bodily lengthwise of the shoe to operate them, and closing mechanisms for the respective wipers operative each independently of the other in response to the resistance to said lengthwise move-

ment of the wipers encountered by engagement of the wipers with the shoe materials to impart to said wipers their lateral closing movement.



1,482,411. END-LASTING MECHANISM. CHARLES F. PYM, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 19, 1918, Serial No. 267,504. Renewed Oct. 20, 1922. Serial No. 595,845. 44 Claims. (Cl. 12—14.)

1. Mechanism of the class described comprising, in combination, wiper members relatively movable to wipe the margin of an upper inward about the end of a shoe, other wiper members arranged to operate upon portions of the upper extending along the sides of the shoe beyond said end wiper members, the side members being movable relatively to the end members in the over-wiping operation about axes substantially perpendicular to the plane of the shoe bottom into substantial conformity to the curve of the shoulder or rib of the sole or insole, and wiper operating means having different wiper operating portions arranged respectively in operative relation to the end members and the side members and connected for operative movements in time relation to close said members inward laterally of the shoe.

1,482,412. HOPPER MECHANISM FOR AUTOMATIC FILLING-REPLENISHING LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Sept. 13, 1922. Serial No. 588,063. 9 Claims. (Cl. 139—250.)

1. In a filling replenishing loom comprising a rotatable hopper having a peripheral series of spring actuated supports to engage the bases of filling carriers, a transferrer and means for rotating said hopper intermittently after each transfer to present the filling carriers successively in transferring position; a stop member on each filling carrier-support, a cooperating detent positioned to engage one

of the filling carrier support stop members to arrest the rotation of the hopper with the foremost filling carrier positioned accurately for transfer, and means operable in synchronism with the movement of the transferrer to withdraw said detent from engagement with said stop member, to permit feeding movement of said hopper after transfer.

1,482,413. END PLATE FOR CUT-OUT VALVES. ELMER RYDER, Argo, Ill. Filed June 25, 1921. Serial No. 480,337. 4 Claims. (Cl. 285—108.)

4. A cut-out valve fitting of the character described having an outer casing, said casing having its side edges substantially straight and its end edges curved inward on a predetermined radius to fit against and conform to the transverse curvature of an exhaust pipe of that radius, a plurality of interchangeable sets of end plates adapted to be secured to the ends of said casing, the plates of one set having their inner edges curved inward on a radius different from the plates of any other set and all on radii greater than that of the end edges of said casing to fit against and conform to the transverse curvature of exhaust pipes of different diameters, and means for clamping said casing to exhaust pipes for which the end edges and the plates are provided.

1,482,414. PROCESS OF MANUFACTURING ANTIFRICTION BEARINGS AND COMPOUNDS. CARL SCHMIDT, Berlin-Tegel, Germany, assignor of two-thirds to Sparlager G. m. b. H., Berlin, Germany, a Corporation of Germany, and one-third to Marburg Brothers, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 20, 1921. Serial No. 463,042. 4 Claims. (Cl. 64—19.)

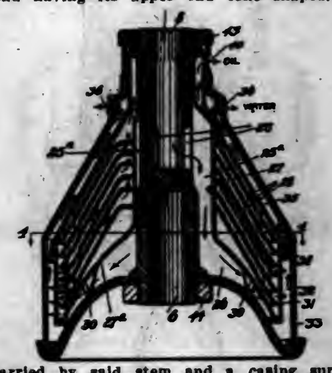
1. Process of manufacturing an antifriction bearing composition of a magnesia cement, consisting in mixing magnesiumoxyde (magnesia usta) with wood pulp previously soaked with oil, and chlormagnesialye, the resulting paste being dried to a cement of great sliding ability.

1,482,415. METHOD OF CONSTRUCTING BRUSHES. GEORGE EDWARD SEABOYER and PAUL H. ANDERSON, Wooster, Ohio. Filed Aug. 18, 1922. Serial No. 582,664. 1 Claim. (Cl. 300—21.)

The herein described method of constructing a brush, comprising inserting bristles or other brush material thru a perforated plate within a ferrule, and while held in a vertical position, the inner ends of the bristles being projected thru said perforations downwardly sufficient for their immersion in liquid cement, applying the latter thereto by means of a cement cup or receptacle, adequately filled and pressed upwardly within the ferrule until said inner ends of brush material are thoroughly saturated and surrounded with the cement, and then, while so held in vertical position to prevent leakage, completing the process by drying and hardening the cement thus enclosed, substantially as set forth.

1,482,416. PRESERVATIVE COMPOSITION. WALTER O. SNELLING, Allentown, Pa. Filed Apr. 17, 1923. Serial No. 632,772. 7 Claims. (Cl. 134—40.)

7. The process of protecting vegetable fibers from decay which comprises impregnating such fibers with copper naphthenate and dichlorbenzene dissolved in a liquid non-drying vehicle.

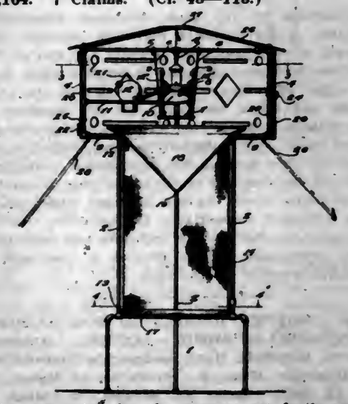


1,482,417. REENFORCEMENT FOR BOXES AND PACKAGES. SIDNEY W. TREAT, Chicago, Ill., assignor to Signode System, Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 28, 1921. Serial No. 440,648. 10 Claims. (Cl. 217—69.)

1. A reinforcing plate for shipping containers, adapted to underlie a binder on said containers and protect the container against the binder, snap means for snapping the binder into engagement with the plate, whereby a middle point of the binder may be engaged with the plate without threading the plate along the binder from one end thereof.

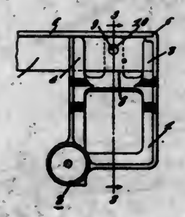
1,482,418. CENTRIFUGAL MACHINE. CHESTER E. UNGER, Goshen, Ind., assignor to Industrial Products Company, Goshen, Ind. Filed July 5, 1923. Serial No. 649,527. 10 Claims. (Cl. 233—29.)

1. A centrifugal separator comprising a stem having an intake port in its upper end in communication with ports extending through the side of the stem, a cylindrical disc carrier surrounding the stem, the lower end of said carrier being conically shaped, a plurality of perforated cone shaped discs carried by the disc carrier, a perforated sediment cylinder surrounding the discs and having its upper end cone shaped, a bowl



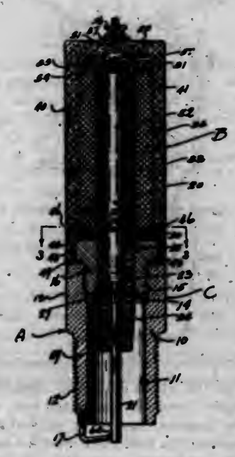
base carried by said stem and a casing surrounding the perforated cylinder and having its upper end conically shaped and provided with discharge openings in communication with a chamber between the sediment cylinder and the casing.

1,482,419. AUTOMOBILE SIGNAL. HENRY B. WILKINSON, Pontiac, Mich. Filed Feb. 19, 1923. Serial No. 619,886. 4 Claims. (Cl. 116—50.)



1. In a signal, a casing adapted to be secured to a support, a sheet metal indicating device in the shape of a hand adapted to be moved longitudinally of the casing to extend from the end thereof, a pivot pin adjacent the open end of the casing, the hand being provided with a notch for engaging the pivot pin at the end of its longitudinal movement, the hand as it is extended from the casing dropping below the horizontal with the notch thereof engaging over the pivot pin, and manually operable means for turning the hand to different positions on the pivot pin.

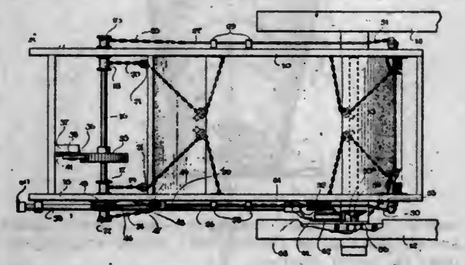
1,482,420. BOLL-WEEVIL TRAP. ARTHUR WILSON, Glendora, Miss. Filed Oct. 31, 1922. Serial No. 598,164. 7 Claims. (Cl. 43—113.)



1. An apparatus for the purpose set forth comprising a supporting frame, a cage carried by said frame, a hood secured upon said frame and enclosing the upper end of the cage, a light-emitting element supported within the hood, and a bowl extending across and resting on the upper end of the cage below the light-emitting element and having an opening in its bottom constituting an entrance to the cage.

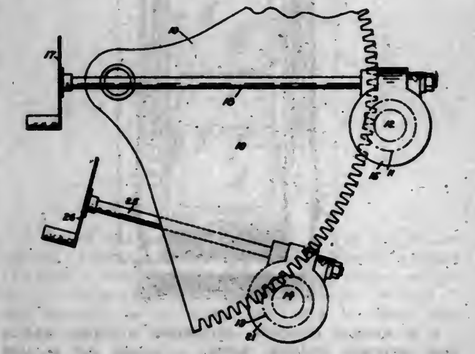
1,482,421. CORNER RISER FOR BEDSPRINGS. ERNEST H. WOELFFEL, Point Pleasant, W. Va. Filed Apr. 1, 1922. Serial No. 548,705. 1 Claim. (Cl. 5—205.)

The combination with the end rail of a mattress frame or the like, of a riser including spaced upstanding means constituting separate bearings for the end rail, a finger opposite the space between said upstanding means, a portion of the rail being insertible between said means and the finger, and cooperating snap fastening means upon the rail and riser for fastening the rail fixedly upon the spaced upstanding means.



1,482,422. SPARK PLUG. ANSEL E. WORKMAN, Gales Ferry, Conn., assignor of one-half to Richard H. Pugh, New London, Conn. Filed Nov. 7, 1922. Serial No. 599,550. 7 Claims. (Cl. 123—169.)

1. A spark plug comprising a supporting casing, an electrode ground in said supporting casing, a central electrode insulated from the casing and first mentioned electrode, and a pair of coils supported on said central electrode wound in opposite directions thereabout and grounded at adjacent ends to said electrode, the opposite adjacent ends of said coils being connected to a common terminal.

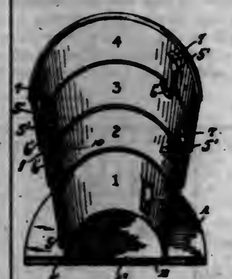


1,482,423. DUMPING VEHICLE. LAWRENCE FRANKLIN YOUNG and WALTER FERRIS, Milwaukee, Wis., assignors to W. L. Thompson, Greenville, Miss. Filed Jan. 20, 1921. Serial No. 438,633. 11 Claims. (Cl. 298—35.)

1. In combination, a dumping vehicle, having gravity dump doors and a ground wheel, a winding shaft, winding reels on said shaft, righting-up chains wound on said reels and connected to said dump doors, actuating mechanism for effecting righting-up movement of said winding shaft including a winding sheave fixed to said winding shaft, a cable having one end secured to and wound on said sheave and having its opposite end fixed to said vehicle, a chain having a loop depending adjacent the ground wheel, a pulley engaging said cable and connected to one end of said chain, a releasable anchorage for the

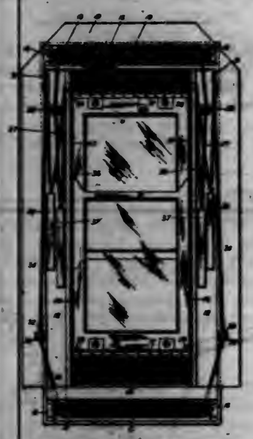
other end of said chain, a half-spool adjustably secured to said ground wheel and projecting laterally therefrom and adapted to normally clear the loop, and a controller for positioning the loop in the path of the spool, including a rotatable shaft, an operating lever therefor, a control bar fixed to said shaft, and having an offset body portion provided with a slot receiving the chain of the body.

1,482,424. ELEVATING MECHANISM. HARRY C. ZIMMERMAN, Washington, D. C. Filed Sept. 20, 1923. Serial No. 663,906. 1 Claim. (Cl. 89—41.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



In combination a gun carriage provided with a trail formed with spaced trail flasks, a gun cradle trunnioned on the carriage, a pair of one-piece sector-shaped rockers pivotally mounted on the cradle trunnions, one on either side of the cradle, said rockers formed with an exterior arcuate face, and each provided with gear teeth on its exterior face, a shaft secured to the cradle, pinions on the shaft adapted to mesh with the teeth of the rockers, means for actuating the shaft to elevate the cradle with respect to the carriage, a shaft secured to the carriage and wholly housed between the trail flasks, pinions on the last named shaft adapted to mesh with the teeth of the rockers, and means for actuating the last named shaft to move the rockers and through the rockers the cradle.

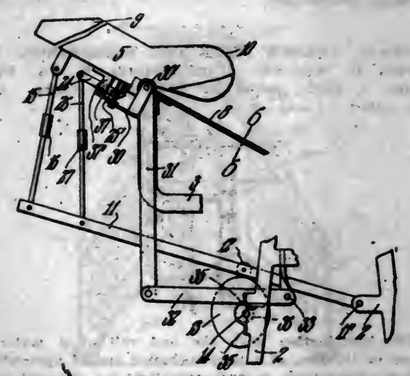
1,482,425. COLLAPSIBLE DRINKING CUP. RAPHAEL ZIONY, Brooklyn, N. Y. Filed May 10, 1922. Serial No. 559,832. 4 Claims. (Cl. 65—58.)



1. The combination in a collapsible container composed of telescopic tapering sections, of an interiorly projecting head on a telescoped section and a comple-

mentary socket portion on the edge of the adjoining telescoping section to permit collapsing whereby when the container is extended and its sections relatively

turned, the projecting head on one section engages against the edge of the adjoining section and the sections are locked together.



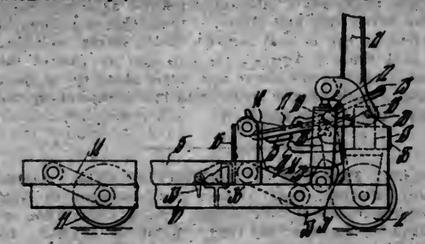
1,482,426. INSECTPROOF SLIDING-SASH WINDOW. HERMAN CHRISTIAN LOUIS AUS, Hamilton, Newcastle, New South Wales, Australia. Filed Nov. 17, 1920. Serial No. 424,755. 2 Claims. (Cl. 20—52.1.)

1. A window structure comprising a frame, and a sash vertically slidable therein, a weight box in said frame, and a vertically hinged cover therefor, a drum having a flexible screen normally rolled thereon, means for attaching one end of the screen to said sash, a sash cord having one end attached to the sash and the other attached to said drum to rotate the same, a pair of pulleys in said frame, said cord having a bight portion hanging between said pulleys, means for tensioning said cord carried by said portion and slidably related thereto and a third pulley mounted on said cover, said cord passing from the first mentioned pulleys through the last mentioned pulley to the drum.

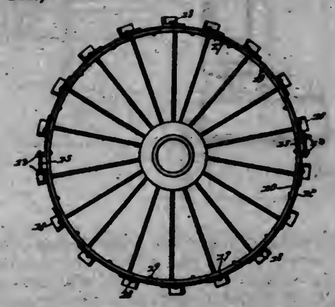
1,482,427. FEEDING AND DELIVERING MECHANISM. STANLEY BOUTIN, Springfield, Mass., assignor to William E. Gilbert, George H. Empsall, and Harold Duckworth, trustees, doing business as Duckworth Chain & Manufacturing Company, Springfield, Mass. Filed Feb. 7, 1923. Serial No. 617,633. 9 Claims. (Cl. 83—92.)

1. In a machine of the class described, a feeding hopper for containing a supply of plates, the bottom of said hopper having a channel groove formed therein of such dimensions as to permit only a single row of plates to lie flatwise therein, said channel groove leading to an exit slot formed through the bottom of said hopper of such

size as to permit one plate at a time to pass therethrough, and means for rocking said hopper to slide said plates into said channel groove and toward said exit slot.



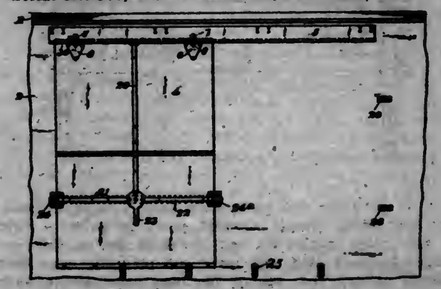
1,482,428. WINDSHIELD WIPER. ARTHUR F. DOOLEY, Philadelphia, Pa. Filed May 17, 1922. Serial No. 561,678. 5 Claims. (Cl. 15—255.)



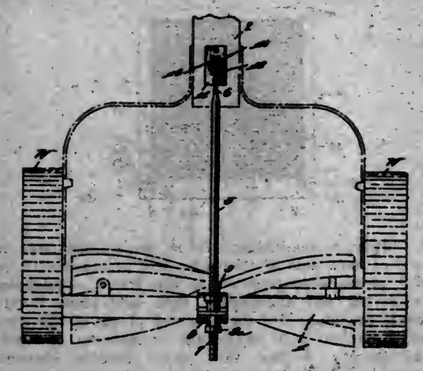
1. A device of the class described comprising in combination, a shaft revolubly mounted on a windshield frame, a wiping element carried by said shaft, a pedal, a Bowden wire having its core connected at one end thereof to said pedal and having operative engagement at its opposite end with said shaft whereby the shaft may be revolved in one direction, and means connected to the shaft to revolve the same in the other direction, said Bowden wire being led from said shaft to said pedal along said windshield frame and exteriorly of the limits of the windshield glass carried by said frame.

1,482,429. ELEVATING TRUCK. FRANK L. EIDMANN, Holyoke, Mass., assignor to J. Lewis Wyckoff, Edward N. White, and George F. Jenks, all of Holyoke, Mass., trustees. Filed Aug. 4, 1919. Serial No. 315,286. 15 Claims. (Cl. 254—10.)

1. In an elevating truck, running wheels, a platform mounted for elevating movement thereon, means for elevating the platform in successive steps, and means for holding the platform against retrograde movement between said steps, said last named means being constructed and arranged to automatically become inoperative when the platform reaches its maximum elevation.

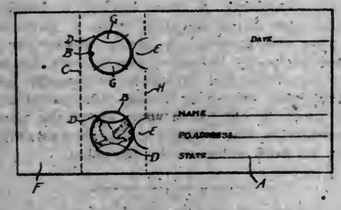


1,482,430. TRACTION ATTACHMENT FOR TRACTOR WHEELS. VIRGIL L. EWAN, Flemingsburg, Ky. Filed Mar. 8, 1922. Serial No. 542,049. 5 Claims. (Cl. 301—144.)



3. In a traction attachment for tractor wheels, two pairs of semi-circular bands adapted to embrace the periphery of a wheel, the bands of each pair being at opposite edges of the wheel, means for securing the bands spaced to occupy when in use positions adjacent to each edge of the wheel, cleats extending from one band to the other and anchored thereto to hold the bands in spaced relation relative to the width of the rim of the tractor wheel, studs on the bands extending inwardly, and a wheel having apertures in its rim to receive the said studs.

1,482,431. BOX-CAR-DOOR HANGER. FRANK M. FRIESELL, San Francisco, Calif. Filed July 25, 1922. Serial No. 577,327. 5 Claims. (Cl. 20—24.)

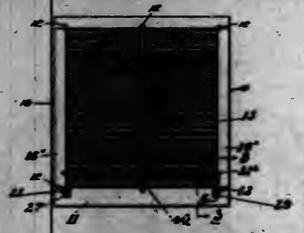


2. A car of the character described having a door opening therein, a track pivotally supported above the door opening for inward and outward movement thereof, means for taking up the wear of the pivotal connections, a door, rollers carried by the door and engaging the track, the said door being capable of longitudinal and lateral movement to open and close the door opening.

1,482,432. ATTACHMENT FOR LAWN MOWERS. FRANK F. HILDEBRAND, Richmond, Va. Filed July 10, 1922. Serial No. 573,828. 2 Claims. (Cl. 56—254.)

1. An attachment of the class described comprising a bracket for mounting on a mower handle, a clamp for connection with the brace rod of a mower and an adjusting rod connecting said clamp and bracket, said rod being adjustably connected with the clamp by means of a sleeve slidably mounted on the adjusting rod, and nuts for holding the sleeve in adjusted position.

1,482,433. COIN-MAILING CARD. WILLIAM G. HOFFMAN and RAYMOND S. HINTZE, Chicago, Ill. Filed Nov. 11, 1922. Serial No. 600,399. 2 Claims. (Cl. 229—92.9.)

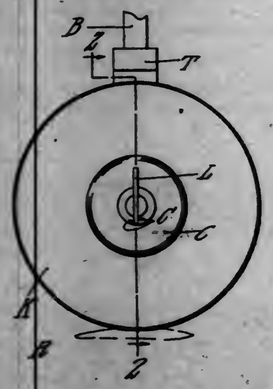


1. A coin mailing card comprising a body portion, an integral folding portion, opposed arc-shaped tongues arranged to hold a coin, and an auxiliary tongue carried by the body portion and arranged to overlie one edge of said foldable portion, when the latter is folded over said coin holding tongues.

1,482,434. CONCRETE-WALL FORM. MARK S. HOTCHKISS, Johnson City, N. Y. Filed Nov. 1, 1921. Serial No. 511,985. 2 Claims. (Cl. 25—131.)

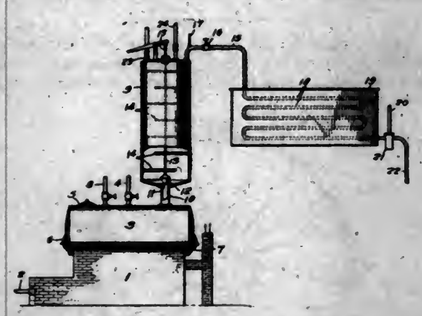
1. In a concrete wall form, a channel iron stud adapted to be supported in an upright position and provided with opposite laterally projecting lengthwise flanges, and a panel extending across the inner face of one of the flanges and provided with an outward projecting flange engaging the inner face of the adjacent side wall of the channel, said panel having a portion thereof engaging the outer face of the flange of the stud to hold the panel against inward displacement from said stud.

1,482,435. VENTILATOR. THOMAS A. JENKINS, Jersey City, N. J. Filed Aug. 30, 1921. Serial No. 496,897. 1 Claim. (Cl. 98—31.)



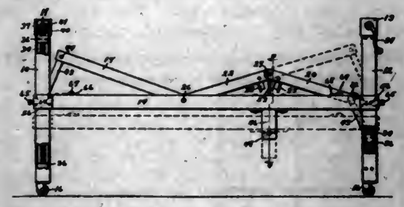
A ventilator comprising a frame, superposed clips arranged at each side of the frame and provided with extended pivots supported within the frame, overlapping slats having end engagement with said clips, flexible elements engaging with the extended pivots of the clips, means connected with the flexible elements for operating them, thereby moving said slats, slidable elements mounted in said frame and adapted to engage certain of said clips to arrest movement of the slats, and cam members for operating said slidable elements.

1,482,436. POULTRY PERCH. ALVIN R. JOHNSTON, Napoleon, Ohio. Filed July 3, 1922. Serial No. 572,642. 1 Claim. (Cl. 119—25.)



A perch comprising a base having a longitudinal groove, the base being supplied with a partition extended across the groove, top strips, means for securing the top strips to the base, and a wick located between the top strips and extended downwardly into the groove, the wick extending across the partition, and being cut away in its lower edge about the partition, thereby permitting the wick to extend downwardly into the groove on both sides of the partition.

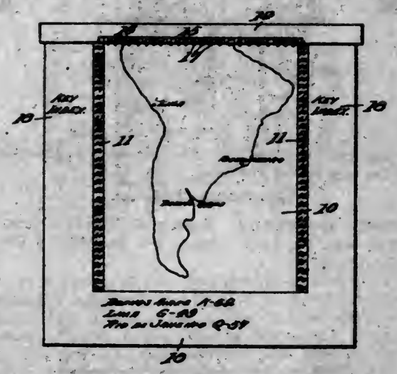
1,482,437. ROTARY SLITTING CUTTER. CHARLES KOEGEL, FREDERICK W. KOEGEL, and HERMAN I. KOEGEL, Holyoke, Mass. Filed Mar. 8, 1922. Serial No. 541,980. 4 Claims. (Cl. 164—70.)



1. The combination in a slitting cutter of, a rigid support, a sleeve slidable thereon, ball bearings carried by said sleeve in a spaced relation, a cutter hub mounted upon said bearings, a nut and a plate carried by said hub that are adapted to abut the outer faces of said bearings to prevent a substantial relative axial movement of the cutter hub and sleeve, a removable cup mounted adjacent an end of said support, and a spring encircling the said support between the cup and an end of the sleeve for urging the sleeve and cutter along the support without impairing the freely rotative movement of the cutter upon the support.

1,482,438. PROCESS OF CONVERTING OILS. ALMER McD. McAFEE, Port Arthur, Tex., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Mar. 29, 1922. Serial No. 547,812. 10 Claims. (Cl. 196—26.)

10. The process of converting higher boiling petroleum oils into lower boiling oils which comprises heating the same in admixture with anhydrous aluminum chlorid to gradually increasing temperature, collecting and condensing the lower boiling hydrocarbons formed, and at the time the temperature reaches such a stage that the aluminum chlorid substantially free of oil is driven from the mixture, collecting and condensing such aluminum chlorid at a point removed from the mixture, removing residual matter from the heating zone and returning the so collected aluminum chlorid thereto.



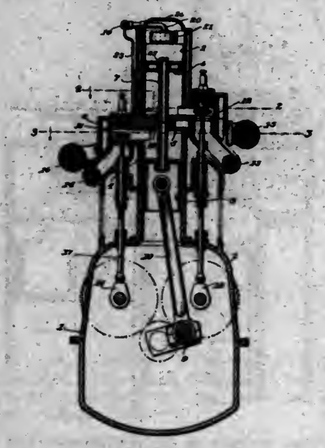
1,482,439. INVALID'S BED. WILLIAM A. McCOLLOUGH, Webster City, Iowa. Filed Feb. 17, 1922. Serial No. 537,196. 2 Claims. (Cl. 5—77.)

1. An invalid's bed, comprising spaced posts, a cross-bar connecting certain of said posts in pairs, a pair of side rails carried by said posts, a bed section arranged between said side rails and pivotally connected thereto at one end, spaced bearings fixed within said posts, screw shafts vertically arranged in said posts and journaled in said bearings, traveling blocks threaded on said screw shafts between said bearings, a pitman pivotally connecting each of said blocks to the free end of said pivoted bed section, spaced bearings fixed in said cross-bar an operating shaft transversely arranged and located in said cross-bar and journaled in the bearings

thereof, bevel gear connections between said operating shaft and each of said screw shafts, said operating shaft projecting through the end of said cross-bar, and a crank for rotating said operating shaft.

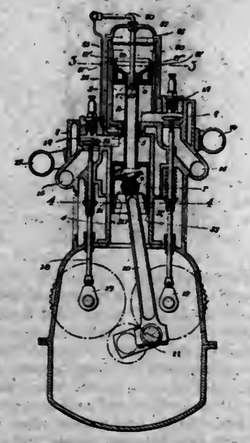
1,482,440. LOCATING DEVICE. ARTHUR H. PLEASANTS, Baltimore, Md. Filed Nov. 22, 1919. Serial No. 340,078. 7 Claims. (Cl. 35—6.)

1. Locating means for maps and the like comprising a sheet of flexible material provided with a map and locating indicia, means adjustably supporting the sheet at one end, and a fixed member overhanging the supported end of the sheet and provided with locating indicia correlated with the indicia on said sheet.



1,482,441. PHOTOGRAPHIC PHOTOMETER. WILHELM SCHLICHTER, Freiburg i. Breisgau, Germany. Filed Nov. 20, 1923. Serial No. 675,877. 8 Claims. (Cl. 88—23.)

1. An instrument for ascertaining the time of exposure in photography, comprising a casing, means for determining the actinic value of the light, means for producing an image of the object or scene to be photographed, and a member within said casing adjacent the image and adapted to have different shades of light produced thereon, and a filter located in position for being traversed by the rays of light used for shading said member and formed in the sections corresponding to the said shades with passages of different aggregate area for the non-filtered passage of the light therethrough.

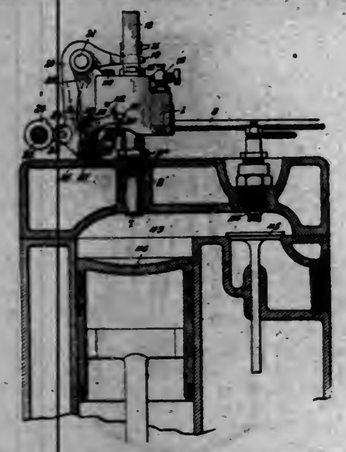


1,482,442. INTERNAL-COMBUSTION ENGINE. JOHN PAUL SHAMBERGER, Baltimore, Md. Filed Feb. 27, 1922. Serial No. 539,519. 7 Claims. (Cl. 184—6.)

4. In an internal combustion engine, a pair of superposed cylinders arranged end to end, a cylinder head closing the inner ends of said cylinders, a piston in each of said cylinders, means rigidly connecting said

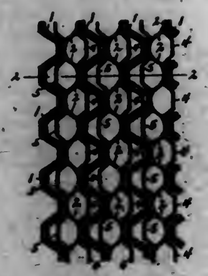
pistons and adapted to convey oil from one cylinder to the other, and means for maintaining a predetermined film of oil on the top of the upper piston.

1,482,443. INTERNAL-COMBUSTION ENGINE. JOHN PAUL SHAMBERGER, Clarendon, Va. Filed Sept. 21, 1922. Serial No. 589,650. 11 Claims. (Cl. 184—6.)



9. In an internal combustion engine, a pair of cylinders arranged end to end, pistons in said cylinders, a hollow rod connecting said pistons, means for feeding oil to the walls of one of said cylinders, the piston of the last-named cylinder having its upper wall inclined toward said hollow rod, and a flange adjacent the upper edge of said inclined wall.

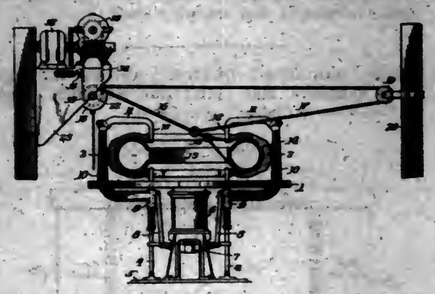
1,482,444. FUEL PUMP. ALFRED SHELDON, New Orleans, La. Filed July 5, 1922. Serial No. 572,826. 5 Claims. (Cl. 123—33.)



1. In a fuel pump and atomizer, the combination of a large bell crank arm, a small bell crank arm fulcrumed on the same shaft as the first arm, a body member adjacent the arms, an air passage formed in the body, a

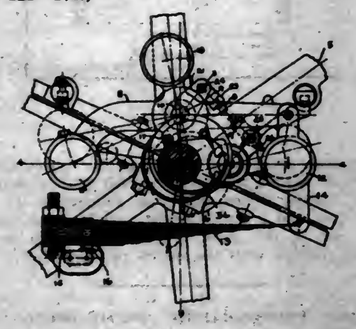
plunger arranged in the passage and actuable by the small crank arm, a fuel passage arranged in the body,

a needle stem movable in the fuel passage, and actuable by the large arm, and a cam adapted to impart movement to the crank arms.



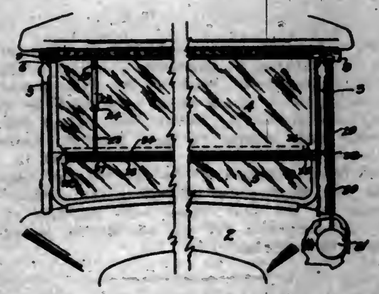
1,482,445. RADIATOR. WILLIAM SPARKS, Jackson, Mich., assignor to The Sparks-Withington Company, Jackson, Mich., a Corporation of Ohio. Filed Sept. 25, 1917. Serial No. 193,079. 3 Claims. (Cl. 257—130.)

1. A radiator comprising a plurality of water tubes, each tube formed of a pair of strips of metal bent into similar tortuous form and shape, and nested together, and having their edges off-set, and in contact, and their central portions spaced apart, a spacer between each adjacent pair of water tubes, said spacer formed of a strip of metal having its opposite edge portions accurately shaped to the same form and outline as the edge of the strip constituting the water tubes, said spacer forming with said two adjacent water tubes two vertical over-lapping rows of cells, the said spacer constituting a symmetrical one-half of the wall of each cell, and pairs of loops formed in connection with the spacer and positioned adjacent the respective accurate shaped edge portions thereof, and extending in opposite directions from the said spacer in the said rows of cells and spaced from the walls of the water tubes.



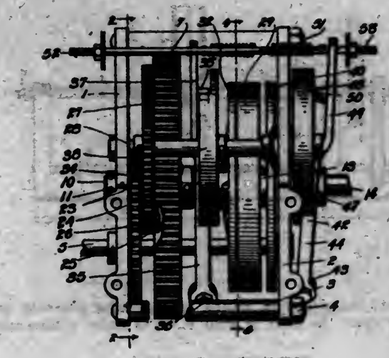
1,482,446. APPARATUS FOR HANDLING AIR BAGS IN THE MANUFACTURE OF TIRES. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 30, 1921. Serial No. 488,600. 17 Claims. (Cl. 18—2.)

4. In an apparatus of the character described, the combination of bead separating device, a grapple adapted to pass around the air bag at one point, means for pulling the grapple in one direction to disengage a portion of



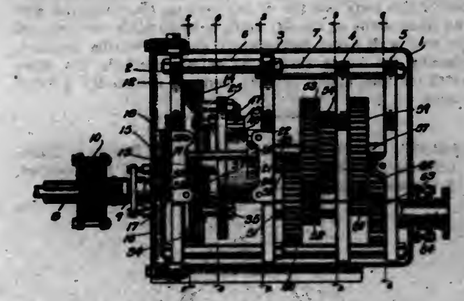
the bag from the tire and then in another direction to pull the bag out of the tire.

1,482,447. GOVERNOR. ROBERT C. STEVENS, Erie, Pa. Filed Sept. 28, 1920. Serial No. 413,356. 3 Claims. (Cl. 121—174.)



1. In an engine, the combination of a crank shaft; two cranks on the crank shaft arranged in angular relation; two eccentrics one having operative relation to each crank respectively; a governor sensitive to centrifugal force and angular inertia; and connections between the governor and eccentrics moving said eccentrics toward and from the axis of the shaft in unison.

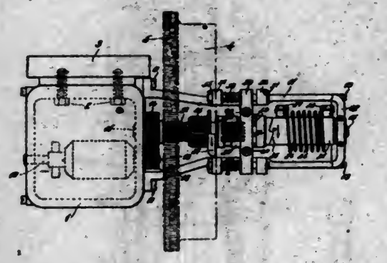
1,482,448. WINDSHIELD WIPER. JERRY J. SULLIVAN, Spokane, Wash. Filed Jan. 14, 1922. Serial No. 529,135. 3 Claims. (Cl. 15—253.)



1. The combination in a windshield cleaner with a slotted tubular casing and a reciprocable member therein, of a resilient arm on said member, a roller on said arm guided in the slotted tubular casing, and a squeegee pivoted on the free end of said arm.

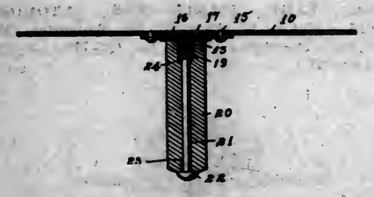
1,482,449. POWER-TRANSMISSION GEARING. FRED G. WHITE, Kansas City, Mo., assignor to Lewis R. Long, Kansas City, Mo. Filed Sept. 22, 1921. Serial No. 502,519. 2 Claims. (Cl. 74—7.)

1. In a device of the class described, a shaft, a gear frictionally mounted on said shaft to normally drive it, another shaft aligning with the first named shaft, a disk thereon, a clutch member on the first named shaft movable into and out of engagement with the disk, a stop member movable into engagement with the disk when the clutch is out of engagement therewith and movable out of engagement with the disk when the clutch is in engagement therewith, and mechanically operating means controlled from the gear frictionally mounted on the first named shaft for effecting movement of the clutch and the stop member.



1,482,450. POWER-TRANSMISSION MECHANISM. FRED G. WHITE, Kansas City, Mo., assignor to Lewis R. Long, Kansas City, Mo. Filed Aug. 26, 1921. Serial No. 495,691. 4 Claims. (Cl. 74—7.)

1. A power transmitting mechanism comprising a driving shaft, a variable speed mechanism, an intermittently operating mechanism for clutching and unclutching the variable speed mechanism to the driving shaft, and a driven shaft operated from the variable speed mechanism.

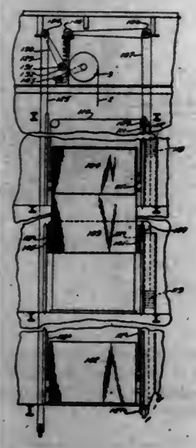


1,482,451. ONE-WAY TRANSMISSION MECHANISM. EDWIN L. WIEGAND, Pittsburgh, Pa. Filed Mar. 31, 1920. Serial No. 370,295. 8 Claims. (Cl. 74—7.)

1. The combination of two axially aligned rotary members having cooperating clutch faces, one of said members being movable axially to engage its clutch face with and disengage it from the clutch face of the other, an element movable in a course substantially parallel to the axis of said member, said member and element having cooperating parts of such nature that when the member

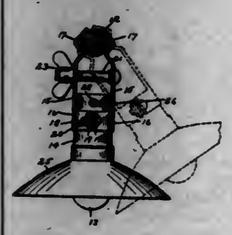
rotates in normal direction it moves the element, and when it rotates in abnormal direction is moved by the element to disengage its clutch face from the clutch face of the other member.

1,482,452. PLASTERER'S HAWK. JESSE C. WILLIAMS, Marshalltown, Iowa. Filed July 11, 1922. Serial No. 574,141. 2 Claims. (Cl. 72—135.)



2. An improved plasterer's hawk comprising a body portion having a flat face to receive plaster, a socket holding plate fixed to the under surface of the body and formed with a depression at its central portion having an angular opening therein, a socket device having a base to be received in the said depression and an angular projection to be received in said angular opening and a cylindrical internally screw threaded socket projecting beyond said opening, a handle member comprising a handle proper having a screw threaded rod therein and an annular recess formed in the handle surrounding the screw threaded portion of the bolt and designed to receive the said cylindrical socket, said parts being so shaped and proportioned that as the bolt is screwed into the socket, the handle will engage the socket holding plate and cause the socket holding plate to be clamped between the base of the socket and the adjacent end of the handle, and means for fixing the bolt against movement relative to the handle.

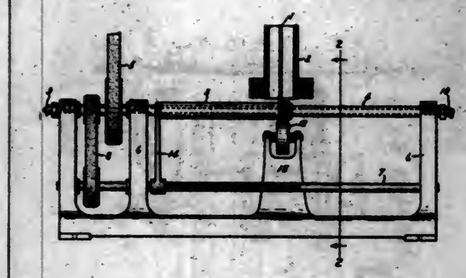
1,482,453. MECHANISM FOR CONTROLLING ELEVATORS. EDWARD WILDE, deceased, late of New York, N. Y.; by Elizabeth White Wylde, New York, N. Y., and New York Trust Company, executors. Filed Apr. 18, 1921. Serial No. 462,195. 10 Claims. (Cl. 187—29.)



5. In combination, a bank of hatchways and elevators, gates along each hatchway and means for operating the gates, cars in said hatchways, a despatcher's station and means thereat whereby the despatcher may cause any of

the cars to start from any floor and automatically stop at any other of said floors; and, at said station, sig

naling means individual to each elevator and indicating to the despatcher the position of each car and when its gates are closed.

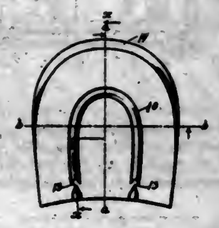


1,482,454. LAMP HOLDER FOR AUTOMOBILE HOODS. HUGH W. BATCHELLER, Worcester, Mass. Filed Nov. 28, 1922. Serial No. 603,776. 1 Claim. (Cl. 240—57.)

A lamp holder of the character referred to comprising two similar members each shaped at one end to form one of a pair of complemental jaws and having its other end offset inwardly from the body of the member and terminating in oppositely projecting ears, the surface of the offset portion of each member, between said ears, being transversely curved, whereby when the members are in operative relation said curved sections will closely embrace the shank of an electric lamp and the ears will project radially outward therefrom at substantially diametrically opposite points, means connecting the ears on the members to retain them in engagement with the shank of a lamp, and means connecting the members and adapted to draw the complemental jaws into engagement with a suitable support and retain them in such relation for the purpose described.

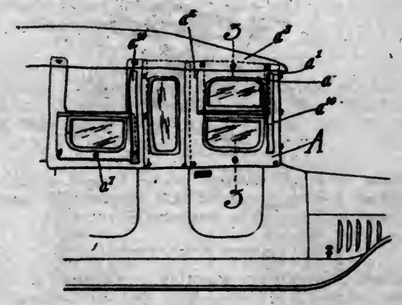
1,482,455. QUARTZ WORKING. EDWARD R. BERRY, Malden, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 20, 1922. Serial No. 589,471. 6 Claims. (Cl. 49—7.)

6. A quartz working apparatus comprising the combination of a rotatable form or mandrel, means for delivering thereto a strip of plastic quartz, means for rotating said mandrel while feeding the same longitudinally, means for applying heat to quartz strip coiled



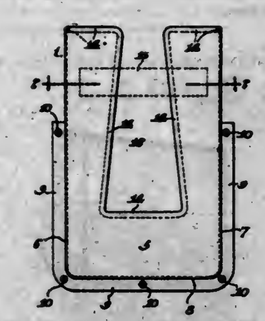
upon said mandrel and means for applying pressure externally upon the coils of said strip to cause coalescence thereof.

1,482,456. SHOE HEEL. THOMAS W. BIGONEY, Philadelphia, Pa. Filed July 17, 1922. Serial No. 575,573. 10 Claims. (Cl. 36—35.)



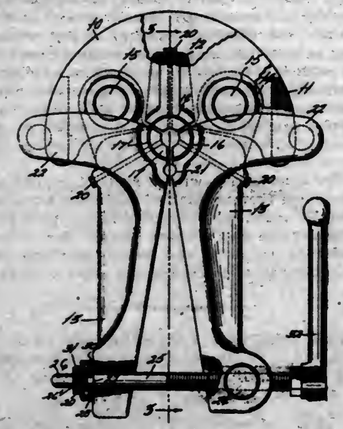
1. As an article of manufacture for attachment to shoes or other foot wear, a rubber heel lift having its upper and lower surfaces disposed in parallel planes with its upper surface of a contour adapted to conform to the outline of the body portion of the heel on the shoe, the side and front walls of the lift being substantially vertical and the rear wall being downwardly and rearwardly inclined, whereby the lower surface is of substantially the same width as the upper surface, but of materially greater length.

1,482,457. SHOE HEEL. THOMAS W. BIGONEY, Philadelphia, Pa. Filed Oct. 31, 1922. Serial No. 598,090. 8 Claims. (Cl. 36—35.)



1. A rubber heel lift having a pair of opposed grooves in the upper and lower surfaces comparatively narrow in respect to their depth, and separated by a comparatively thin web of material adapted to be distorted to permit a widening or narrowing of the grooves, and a corresponding variation in the transverse dimension of the lift.

1,482,458. AUTOMOBILE CURTAIN. WALTER J. BRUNSMAN, Cincinnati, Ohio. Filed Jan. 3, 1921. Serial No. 434,465. 2 Claims. (Cl. 296—138).

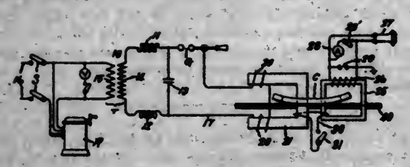


1. A curtain for vehicles having a top and comprising a body portion adapted to be secured upon the vehicle, a transparency mounted upon the body of the curtain, stay strips extending from the body and each being adapted to extend to the top of the vehicle whereby an opening is provided between the stay strips, the body of the curtain, and the top of the vehicle, a flap hingedly mounted on the curtain adapted in one position to be secured over the opening, and in a second position being adapted to be secured upon the curtain so as to leave the opening unobstructed, a transparency mounted upon the flap and adapted in the first position of the flap to register with the opening, and in the second position of the flap to register with the transparency upon the body, and a protector strip mounted on the curtain and extending over the end of the flap.

1,482,459. MAIL RECEPTACLE. JACOB M. CAHAN, Philadelphia, Pa. Filed Nov. 11, 1922. Serial No. 600,254. 5 Claims. (Cl. 232—19.)

1. A mail receptacle adapted to be attached to the inside surface of a door adjacent the usual mail slot comprising a unitary box like structure open at the top and on the side toward the door, the rear wall of said structure being provided with a slot or opening extending from the top downward and terminating above the bottom of said structure, said slot or opening being relatively narrow at the top and wider at the bottom thereof, and means for attaching the structure to the door.

1,482,460. WIRE LINE CLAMP. FRANK E. CROTTO, Tulsa, Okla., assignor to Western Supply Company, Tulsa, Okla. Filed June 18, 1923. Serial No. 646,283. 10 Claims. (Cl. 24—135.)

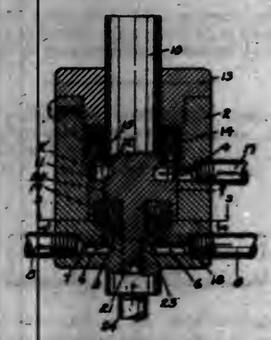


1. In a line clamp, a head, a clamping slip carried by the head, a pair of co-acting arms pivoted to the head, and slips carried by the arms and correlated to the head slip.

1,482,461. BELT COUPLING. FREDERICK DIEHL, Elizabeth, N. J., assignor to Diehl Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed June 15, 1922. Serial No. 568,541. 1 Claim. (Cl. 24—31.)

The combination with the meeting ends of a belt of round section, of a clinch-plate extending across the meeting line and formed with end apertures and with a central aperture, and a U-shaped member having a pair of legs and a body-portion of less width than the diameter of the belt section but of the same width as said legs at its junctures with the latter, said U-shaped member having its body-portion applied to the inner surface of the belt across the belt ends and its legs passed transversely through the respective belt ends and through the end apertures of the clinch-plate, said legs having their ends bent toward one another and passed into the central aperture in the clinch plate and anchored by soldering to the walls of such central aperture.

1,482,462. ELECTRICAL TESTING DEVICE. FRANCIS DUBSKY, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 31, 1921. Serial No. 441,256. 14 Claims. (Cl. 175—183.)

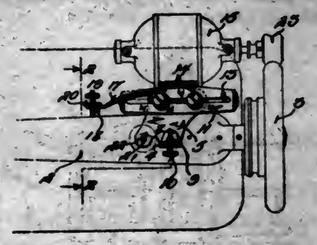


3. The method of testing open-circuited windings and the like which consists in inducing therein a highly damped high frequency electromotive force, adjusting the

magnitude of the same to a predetermined value, and observing the inductive effects of said induced electromotive force.

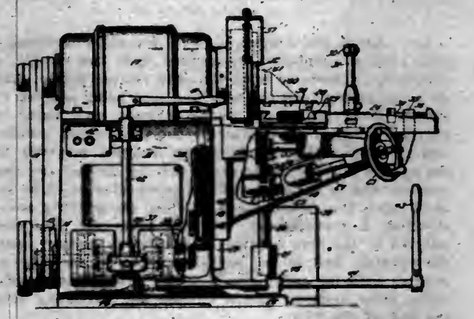
12. A testing device for windings and the like comprising a source of electric energy, an oscillating circuit, a magnetic core inductively associated with said oscillating circuit and adapted to induce a test voltage in a winding to be tested, an auxiliary magnetic core arranged to link with the winding to be tested, a winding on said auxiliary core, and current indicating means in series with said last named winding, both of said cores being composed of separable parts pivotally disposed in operative positions and adapted to be opened to receive the winding to be tested.

14. The combination with a support, of two magnetic cores mounted thereon, each of said cores being composed of separable parts, each core having one part secured to said support and another part pivoted thereto to receive a winding to be tested, and means controlled by one of said pivoted parts for closing the other of said pivoted parts.



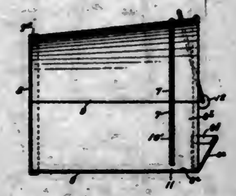
1,482,463. CONTROL VALVE FOR HYDRAULIC APPARATUS. FRANK C. EMRICK, Kalamazoo, Mich. Filed Oct. 12, 1920. Serial No. 416,440. 3 Claims. (Cl. 138—16.)

1. In a control valve for hydraulic power apparatus, the combination of a valve casing having a cylindrical valve chamber provided with a conical valve seat at its lower end and having a supply passage above its said seat and power member ports opening into the face of said seat and a return passage disposed centrally of said seat, a cylindrical valve rotatable in said casing and provided with a stem at its upper end and with an axially disposed extension at its lower end and projecting into said return passage, said valve being shouldered at the base of the stem and having an annular recess at its shoulder, a packing member for said stem of U-cross section disposed facing said shoulder and coacting therewith and with said recess to provide an annular passage communicating with said supply passage, and a hard fiber facing for said valve coacting with said valve seat, said valve facing having a longitudinal passage therein opening in said shoulder and adapted to be brought into register with said power member ports alternately, said valve facing and valve extension having exhaust passages therein adapted to be alternately brought into register with said power member ports, said exhaust passages communicating with said return passage.



1,482,464. SEWING-MACHINE-MOTOR BRACKET. HARRISON D. [illegible], Racine, Wis. Filed Oct. 9, 1923. Serial No. 667,468. 4 Claims. (Cl. 74—26.)

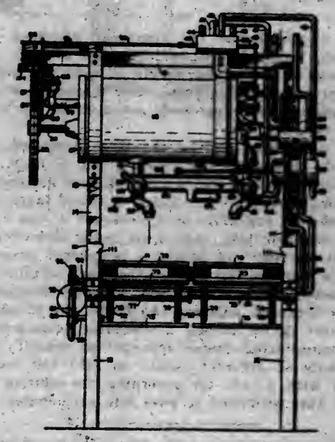
1. A bracket for a sewing machine motor comprising means for attachment to said motor and having a laterally extending arm, a screw threaded through said arm and adapted to bear against a portion of said sewing



machine, a support movably related to said means, and attaching means carried by said support for engaging the spool carrying pin of a sewing machine.

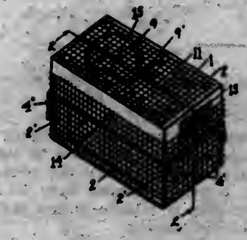
1,482,465. GRINDING MACHINE. FREDERIC E. GARDNER, Beloit, Wis. Filed July 28, 1919. Serial No. 313,668. 9 Claims. (Cl. 51—122.)

1. A grinding machine having, in combination, a column, a slidable knee on said column, a work carrier mounted on said knee, an elongated worm in said column extending parallel to the direction of sliding motion of said knee, a rotatable shaft in said knee, a worm wheel on said shaft meshing with said worm in all positions of said knee, and a connection between said rotatable shaft and said work carrier for moving the latter with respect to said knee.



1,482,466. DRINKING FOUNTAIN. ROY W. GLASER, Burlington, Wis. Filed Feb. 1, 1922. Serial No. 533,250. 1 Claim. (Cl. 119—77.)

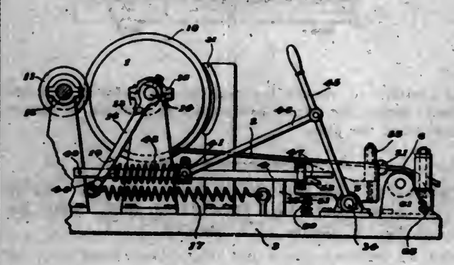
A drinking fountain formed of four primarily separate sections of sheet material, one of said sections forming a circular bottom or wall, second and third ones of said sections having edges secured to one another and combining to form a tubular body, one end of this tubular body being substantially circular and united with the perimeter of said bottom, the second one of said sections being semi-circular at the end opposite to that adjoining said circular section, the third one of said sections forming two plane wall portions and an intermediate plane wall portion at right angles to the last mentioned portions, said third section including a



trough-extension having ends turned at right angles to its main portion and secured to said parallel walls while said main portion stands at an angle to said intermediate portion, said tubular body having a groove in its curved and plane portions, the fourth one of said sections having a portion of its periphery fitted in said groove, a water-inlet being provided between said fourth section and said intermediate wall portion.

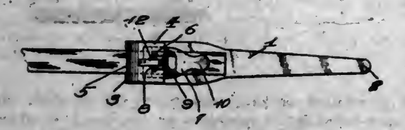
1,482,467. MEASURING AND FILLING MACHINE. BERTIE S. HARRINGTON, Fort Worth, Tex. Filed Oct. 28, 1920. Serial No. 420,187. 4 Claims. (Cl. 226—99.)

1. In a measuring and dispensing apparatus, the combination with the alternately discharging nozzles of a measuring device, of means for positioning receptacles at the nozzles comprising a plurality of endless conveyors having longitudinally spaced receptacle-carrying portions, the conveyors arranged in parallelism and moving each before one of the nozzles, and means operatively coupled with mechanism of the measuring device to actuate the conveyors alternately to place a receptacle before the inactive nozzle, said means acting automatically in synchronism with the discharging nozzles of the measuring device.



1,482,468. CAGE FOR TRANSPORTING AND INTRODUCING BEES. OREL L. HERSHISER, Kenmore, N. Y. Filed Apr. 17, 1922. Serial No. 554,260. 7 Claims. (Cl. 6—10.)

1. In a transporting and introducing cage for queen bees, the combination of a box formed of a compartment of wood or similar material, containing a screened aperture for receiving the queen bee and attendant workers, screen sides and ends therefor extending beyond the said wood box, an apertured false bottom for the said compartment with slide cover for the aperture, a removable block apertured and containing recesses for food for the transported bees disposed within the extended screen, and a screen cover for the food compartment whereby the food compartment can be readily removed, the extended screen forced into the face of the comb and the false bottom removed, as specified.

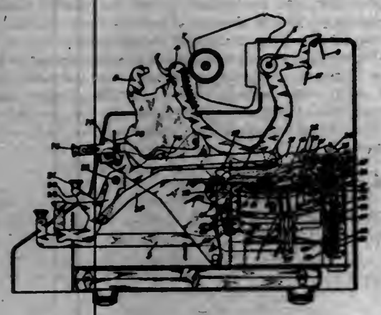


6. In a cage for transporting and introducing a queen bee, a structure comprising a box with suitable screen sides, with slide bottom above the lower edge thereof, whereby the extended screen sides can be inserted into the face of comb and the slide bottom removed, as specified.

1,482,469. AUTOMATIC TROLLING WINCH. JASPER CARL JESPERSEN, Freeland, Wash. Filed Feb. 3, 1923. Serial No. 616,723. 10 Claims. (Cl. 254—173.)

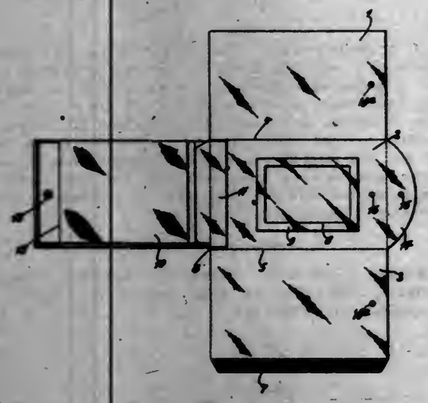
1. A trolling winch comprising a drum upon which the line is received, means for rotating said drum and for stopping such rotation, a lever shiftable to control the application of said means, a ball fixed upon said line, a tiltable platform, means upon said platform permitting passage of the line, but engageable by the ball to tilt the platform, a trip bar engageable with said lever, and catches upon said trip bar and platform engageable to maintain said lever in position to cause rotation of the drum.

1,482,470. BODKIN. LIBBIE M. KOEHLER, Seattle, Wash. Filed Nov. 11, 1922. Serial No. 600,370. 2 Claims. (Cl. 223—38.)



1. A bodkin, comprising a body formed with an overturned end portion, and a ribbon receiving slot in the bend thereof, and a ribbon holding member formed with a tongue extending through a slot in the overturned end for pivotally connecting the member with said end and having a curved end for engaging a ribbon to hold it between said end and the body.

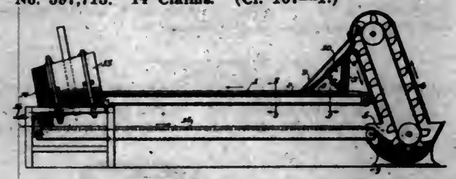
1,482,471. ADDING AND CALCULATING MACHINE. WALTER WM. LANDSIEDEL, Norwood, Ohio, assignor to The Dalton Adding Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 3, 1921. Serial No. 474,747. 22 Claims. (Cl. 235—60.)



1. In a machine of the character described, the combination of a laterally movable carriage, digit pins in the carriage, mechanism for setting the pins and for

causing the carriage to move the set pins laterally to proper denominational order positions, a device settable

in position to engage the pins to unset them, and optional means for setting said device in position to engage and unset the pins.

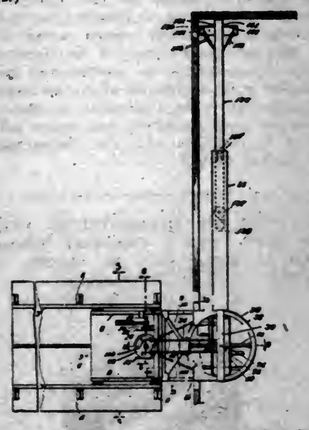


1,482,472. MAILING PACKAGE. STEPHEN OLIVER LANGE, St. Louis, Mo. Filed May 3, 1922. Serial No. 558,065. 5 Claims. (Cl. 229—73.)

2. A mailing package, comprising an envelope body, an open-ended fabric container having one wall adjacent to the envelope body connected therewith, said fabric container being foldable over the rear face of the envelope body, and releasable means for closing the end of the envelope and also for holding the closed end of said container in position across the rear face of the envelope body.

4. In an envelope, a postage support comprising a plurality of leaves secured together at one adjacent edge thereof and adapted to receive postage stamps and being successively removable to expose subjacent postage stamps supported by the leaves for successive cancellation thereon during successive trips, the outermost stamp being adapted to carry the envelope on its initial trip and to be cancelled during such transit, a fabric container having one end open and permanently secured to said envelope and the other end closed, and means engaging the closed end of said container holding said container flat against the envelope in position to prevent the contents of the container from working out of the open end.

1,482,473. MACHINE FOR COATING CONFECTION CENTERS WITH NUTS. WILLIAM SWIFT LORD, Evanston, Ill., and LOUIS DAVIS, Brooklyn, N. Y., assignors to Williamson Candy Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 30, 1922. Serial No. 597,715. 14 Claims. (Cl. 107—1.)



1. In a machine of the character described, a conveyor belt, means for depositing a bed of nuts on said belt, means arranged rearwardly of said first-mentioned means for depositing on such bed a second layer of nuts, and a rotating tumbling drum arranged at the rear end of said conveyor belt.

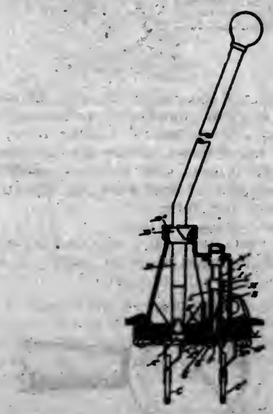
2. In a machine of the character described, a conveyor belt, means for depositing a bed of nuts on said belt, means arranged rearwardly of said first-mentioned means for depositing on such bed a second layer of nuts, and a rotating tumbling drum arranged at the rear end of said conveyor belt, said drum being downwardly inclined at its rear and having a peripheral screen.

9. In a machine for applying coatings of nuts to confection centers, a conveyor belt, a supply receptacle for the nuts arranged adjacent the front end of such belt, an elevator device having a discharge passageway and two communicating chutes arranged to deposit two layers of nuts at different points on said belt and being provided with a gate for governing the relative proportions of nuts permitted to pass into said chutes.

1,482,474. MACHINE FOR UNLOADING RAILROAD CARS. GEORGE MANIERRE, Milwaukee, Wis. Filed Oct. 2, 1920. Serial No. 414,272. 45 Claims. (Cl. 214—44.)

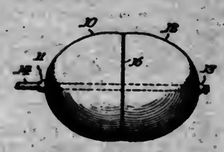
1. A car unloading machine, comprising in combination a discharge element adapted to be introduced into the car, a carrying structure for the discharge element, and a motor driven mechanism fixed on the carrying structure adapted to be introduced into the car for actuating the discharge element.

1,482,475. SOUNDING DEVICE FOR DOLLS AND OTHER TOYS. SAMUEL MARCUS, Brooklyn, N. Y. Filed Apr. 27, 1922. Serial No. 556,940. 12 Claims. (Cl. 46—46.)



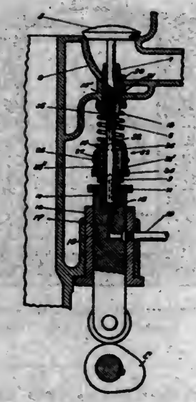
1. A sounding device of the character described comprising a hollow body shell, a weighty plunger fitting

and movable therein, a sound-box communicating with said body and containing a reed and having an outlet opening and a self-closing valve or damper therefor, provided with an outwardly projecting member and an



operating rod connected with said plunger and projecting through the end of said body and provided with an arm adapted to move against said projecting member and open said valve or damper on the movement of said plunger.

1,482,476. GEAR-SHIFT LOCK. GURDON C. MATHER, Detroit, Mich. Filed July 5, 1918. Serial No. 243,283. 7 Claims. (Cl. 70—126.)

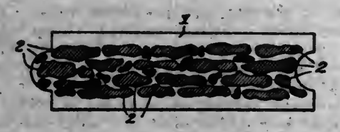


8. The combination with a pair of gear shifter rods, having recesses in their adjacent faces and a member alternatively engageable in said recesses, of a single locking bar engageable in said recesses in both of said gear-shifter rods.

1,482,477. CASING AND METHOD OF MAKING SAME. SOLOMON MAY, Chicago, Ill. Filed Dec. 3, 1921. Serial No. 519,790. 20 Claims. (Cl. 17—45.)

13. A step in the art of the manufacture of casings, which consists of providing two sac-like members, each having a single opening, and inserting one of said members through the opening of the other of said members.

1,482,478. LUBRICATING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. WALKER M. MILLIGAN, Huntington Beach, Calif. Filed Nov. 8, 1922. Serial No. 599,705. 5 Claims. (Cl. 74—86.)

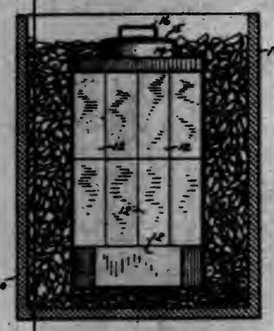


1. In an internal combustion engine, a valve stem provided with an axial duct having a side outlet, means for supplying oil into said duct, a guide surrounding said stem and having an opening affording communication between said outlet and the peripheral surface of the stem below said guide, and means provided on said stem for retaining the oil discharged through the guide opening.

1,482,479. MANUFACTURE OF A NONHYGROSCOPIC FERTILIZER. ALWIN MITTASCH and CARL KIRCHER, Ludwigshafen-on-the-Rhine, Germany, assignors, by mesne assignments, to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Bavaria, Germany, a Corporation of the Grand Duchy of Baden. Filed Sept. 21, 1920. Serial No. 411,854. 3 Claims. (Cl. 71—9.)

1. The process of producing a nonhygroscopic fertilizer by mixing solid ammonium nitrate with solid ammonium sulfate in the presence of moisture.

1,482,480. LINING PLATE FOR BANK VAULTS AND SIMILAR STRUCTURES. HAROLD WEAVER MOWERY, Mahwah, N. J., assignor to American Abrasive Metals Company, a Corporation of New York. Filed May 19, 1922. Serial No. 562,225. 2 Claims. (Cl. 109—1.)



1. A plate for use in constructing the walls of bank vaults and similar structures composed of masses of refractory metallic oxides cast in a ferro-chrome matrix.

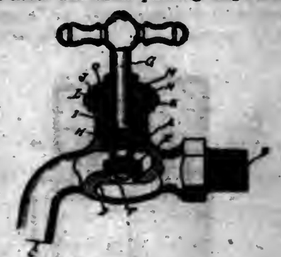
1,482,481. ICE-CREAM-BRICK CAVE. EVERETT A. PHILLIPS, Summit, N. J., assignor, by mesne assignments, to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 23, 1920. Serial No. 412,110. 1 Claim. (Cl. 220—9.)

In combination, a tub adapted to hold a refrigerant, a container in the tub and having vertical walls, and a main cover extending over the vertical walls, said main cover having an opening of less than half the area of

the top of the container, said opening being surrounded by a raised portion and a supplemental cover for said opening, whereby access to the interior of the container

may be had through said opening while the remaining portion of the main cover has refrigerant over and around it.

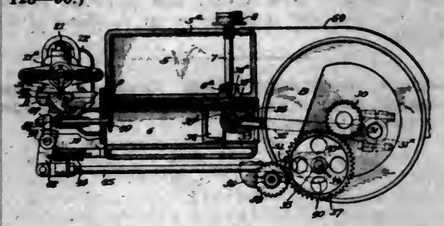
1,482,482. METHOD OF MAKING AND EXHIBITING MOVING PICTURES. ISAAC T. PURCELL, Wakeeney, Kans. Original application filed Nov. 2, 1921, Serial No. 512,281. Divided and this application filed Nov. 29, 1922. Serial No. 603,976. 3 Claims. (Cl. 88—16.)



1. In an apparatus of the class described, a stationary support, a traveling support over said stationary support, a pivot shaft for said traveling support journaled in said stationary support, a worm wheel carried by said pivot shaft, a sound recording machine and a motion picture camera carried by said traveling support, a motor, a drum shaft rotated from said motor, a worm connected with said stationary support for movement into and out of engagement with said worm wheel and having manually controlled operating means, and means for transmitting operative movement from said drive shaft to said worm, camera and sound recording machine.

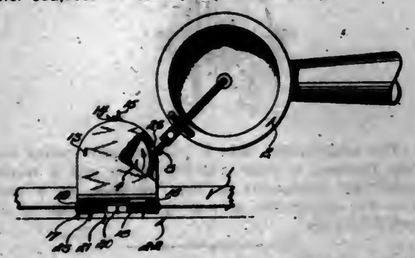
1,482,483. PROCESS OF REFINING OILS. ARTHUR STANLEY QUICK, London, England. Filed Aug. 31, 1921. Serial No. 497,454. 2 Claims. (Cl. 87—12.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A process of refining oil consisting in adding to the oil an equal quantity of water and about one half the quantity of monazite sand, heating the mixture, stirring the mixture, allowing the mixture to settle and then separating the oil.



1,482,484. BIB COCK. THOMAS HERBERT ROBERTS, Detroit, Mich., assignor to Roberts Brass Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 14, 1921. Serial No. 514,852. 4 Claims. (Cl. 251—50.)

2. In a valve, the combination with a casing, having an opening for the introduction of a valve member, of a cap closing said opening, a valve member adapted to seat within said casing, a stem for said valve member passing through said cap, a washer seated within said opening of the casing flush with the margin of said opening, and inner and outer packing rings independently

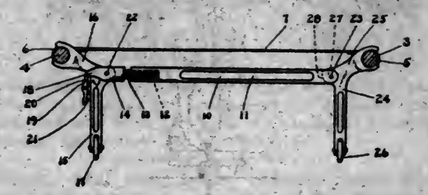


compressed upon said washer by said cap, the former establishing a seal between the cap and stem and the latter between the cap and casing.

1,482,485. EXPLOSIVE ENGINE. CHARLES A. ROBERTSON, Springfield, Ill., assignor to Montgomery Ward & Co., Inc., Chicago, Ill., a Corporation of Illinois. Filed Nov. 14, 1921. Serial No. 515,174. 2 Claims. (Cl. 123—90.)

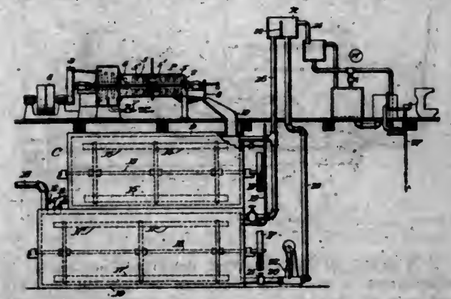
1. In a machine of the class described, the combination of a cylinder, a valve controlling communication to the same, ignition mechanism, a rocking lever, a piston operating in the cylinder, means for actuating said lever from said piston, and members operated through the instrumentality of said lever for operating the ignition mechanism and valve.

1,482,486. NEEDLE SHARPENER. WALTER M. ROSCOE, Milwaukee, Wis. Filed Sept. 30, 1922. Serial No. 591,505. 5 Claims. (Cl. 51—241.)



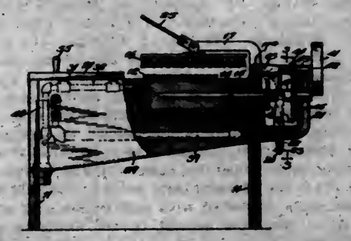
1. The combination of a phonograph having a driving mechanism and a reproducer provided with a needle; and a needle sharpener comprising a revoluble sharpening element and means for operatively coupling said driving mechanism with said sharpening element, said sharpening element being so located relatively to said reproducer as to permit the contacting of the needle and element while the needle is in position on said reproducer.

1,482,487. STRETCHER. JESSE T. SHEETS, Covington, Ky. Filed Feb. 5, 1923. Serial No. 616,903. 2 Claims. (Cl. 5—114.)



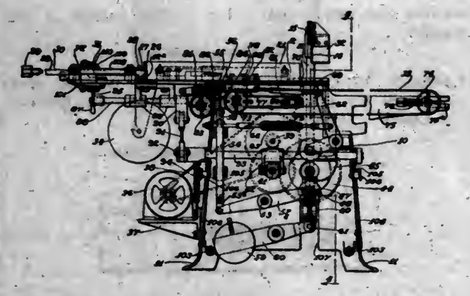
1. In a device of the class described the combination of a pair of poles, a flexible bed carried by the poles, a cross bar, a leg pivotally carried by one end of the cross

bar, a bracket formed on the leg for receiving one of the poles, a lug formed on the leg, and a complementary wall formed on the cross bar for engagement by the lug for limiting the movement of the leg and bracket, a second leg pivotally mounted at the other end of the cross bar, a bracket carried by the last mentioned leg for receiving the second pole, a finger formed on the



last mentioned end of the cross bar, and a catch carried by the last mentioned leg for engagement upon the finger for securing the last mentioned bracket against movement toward the first mentioned bracket under the influence of the flexible bed when the bed is tensioned to retain the lug on the first mentioned leg in engagement with the wall on the cross bar.

1,482,488. RECOVERY OF STOCK. CLEMENT F. SISSON and HARRY E. EURICH, White Pigeon, Mich. Filed May 25, 1921. Serial No. 472,606. 7 Claims. (Cl. 92—20.)



1. Apparatus for removing paraffin from stock comprising means for pulping said stock, storage means for treating the resulting pulp, a reservoir for treated pulp, and means for leading overflow material from said reservoir back to said storage means.

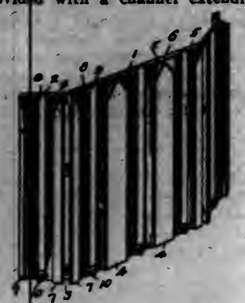
1,482,489. CAN WASHER. THEODORE L. VALERIUS and OLAF LARSEN, Fort Atkinson, Wis., assignors to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed July 17, 1919. Serial No. 311,508. 3 Claims. (Cl. 141—7.)

1. In a machine of the character described the combination of a tank, a bracket mounted upon one upright wall of the tank, a rotatable spindle journalled in said bracket so as to extend forwardly and horizontally into the tank, a brush carried by said spindle, a second brush, and an arm pivoted upon a horizontal axis on said bracket and extending forwardly over the first mentioned brush and carrying said second brush, said arm having a portion projecting rearwardly, spring means bearing between said portion and said bracket tending to resist downward movement of said second brush.

1,482,490. CUTTING MACHINE. THEODORE L. VALERIUS and OLAF LARSEN, Fort Atkinson, Wis., assignors to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 15, 1919. Serial No. 338,283. 16 Claims. (Cl. 107—21.)

1. In an ice cream severing machine, a table, means for intermittently pushing a mass of material across said table to project beyond said table, means for intermittently severing the projecting portion of said mass of material and allowing it to fall off said table, a conveyor belt adapted to receive the severed portions, means for intermittently feeding said conveyor belt and for intermittently feeding paper on to said conveyor belt, means for intermittently severing the last portion of paper fed on to said belt, means for simultaneously actuating said paper and material severing means, and means for simultaneously actuating said pushing means, conveyor belt and paper feed means.

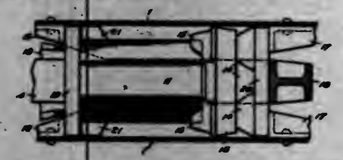
4. In an ice cream severing machine, a table, a cutting knife, a pushing means and a receiving means, and means in the nature of a single movable cam adapted to produce synchronized alternate actuation of said knife and of said pushing and receiving means.



5. In an ice cream severing machine, a table, a cutting knife, a pushing means, a receiving means, and a paper feeding means, and means in the nature of a single movable cam adapted to produce synchronised alternate actuation of said knife and of said pushing, receiving and feeding means.

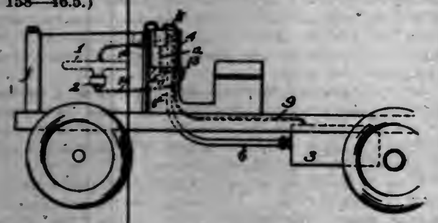
15. In an ice cream severing machine, a table, a frame supporting said table and constituting a housing, a vertically reciprocable knife above said table, a pushing means operating above said table across the face thereof, a conveyor belt extending out from under said table, paper feeding means under said table adapted to feed paper to said conveyor belt, paper severing means, and a transmission for alternate actuation of said cutting knife and said paper severing means, and of said pushing means, conveyor belt and paper feeding means, said transmission and said paper severing means being housed in said frame.

1,482,491. CARTRIDGE HOLDER. FRANK VOGEL, New Washington, Ohio. Filed Feb. 19, 1923. Serial No. 619,991. 2 Claims. (Cl. 224—13.)



2. A cartridge holder of the class described including a plate having a pair of spaced ridges thereon, said

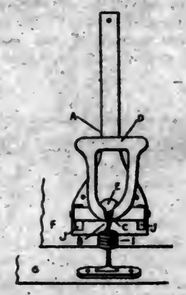
ridges provided with grooves in adjacent sides thereof, said plate provided with a channel extending centrally



between the ridges and a stop at the bottom of the channel.

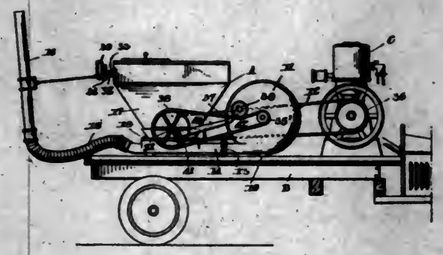
1,482,492. DRAFT GEAR. EDMUND H. WALKER, New York, N. Y. Filed May 2, 1923. Serial No. 636,057. 9 Claims. (Cl. 213—26.)

1. A spring barrel for friction draft gear having opposite open end portions of substantially similar contour, and means arranged externally of said barrel adjacent one end thereof for preventing the incorrect assembly of the friction head thereto.



1,482,493. FUEL SYSTEM FOR MOTOR VEHICLES. ELVERTON W. WEAVER, Cleveland, Ohio. Filed Sept. 19, 1921. Serial No. 501,512. 4 Claims. (Cl. 158—46.5.)

1. A liquid fuel system for use with the carbureter of an internal combustion engine comprising a main fuel storage tank, an auxiliary fuel storage tank located above the main storage tank and above the carbureter with which the system is used, means including a suction tank independent of the auxiliary tank for delivering fuel from the main tank to the carbureter, a pipe connecting the main fuel tank with the suction tank, a pipe connected with the carbureter, said carbureter pipe being adapted for connection with the suction tank and with the auxiliary fuel tank or valve means connecting the carbureter pipe with either the suction tank or auxiliary fuel tank.

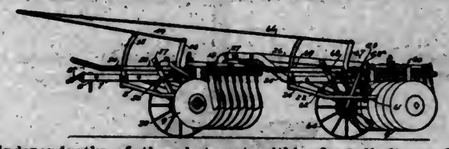


1,482,494. AUTOMOBILE HOOD CATCH OR FASTENING THEREOF. MAX L. WEISS, Brooklyn, N. Y. Filed May 25, 1923. Serial No. 641,382. 1 Claim. (Cl. 292—228.)

An automobile hood catch which is attached to the hood of the automobile and provided with a handle and torsional spring to allow necessary movement, a socket and a tongue or springy rod which is attached to and carried upon the chassis of the automobile, provided with a ball affixed at the upper end of said tongue or

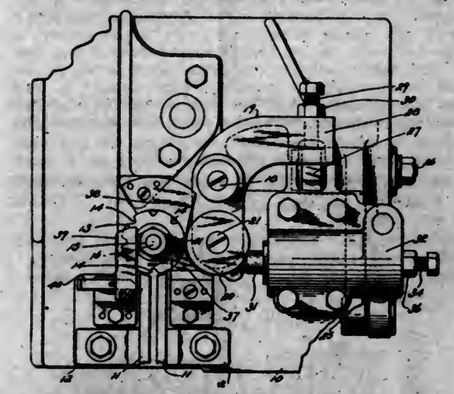
rod which ball when the hood is in a closed position snaps and fits into the socket or space, thereby holding the automobile hood securely closed and fastened, and locking the hood to the chassis of the automobile.

1,482,495. POWER DUSTING MACHINE. ROBERT BENJAMIN WESTHAVER, Mahone Bay, Nova Scotia, Canada. Filed Mar. 9, 1923. Serial No. 623,888. 2 Claims. (Cl. 43—148.)



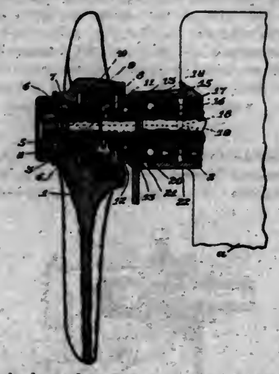
1. A device of the character described comprising, in combination, a wind pipe connected at one end to a fan and open at the other end, a feed hopper provided with a perforated base plate adapted to fit into said pipe, a driving shaft in said hopper, an agitator on said shaft, means for operating the shaft and the fan simultaneously whereby the dust in the hopper is agitated and blown outwardly through said wind pipe, means for controlling the outflow of said dust comprising a pivotally mounted valve adapted to fit over the hopper base plate, an operating rod provided with spring retaining means and having a handle at the hopper top designed to open and close said valve.

1,482,496. DISK-HARROW MECHANISM. CHARLES H. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Aug. 4, 1919. Serial No. 315,089. 7 Claims. (Cl. 55—83.)



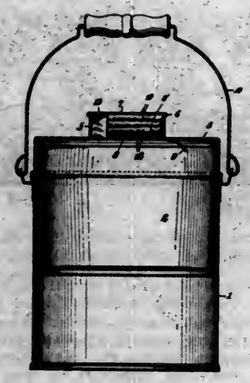
1. A multiple gang disk harrow comprising front and rear frames, the rear frame being connected to the front frame to swing about a substantially vertical axis, transversely disposed arched axles carried by said frames respectively, ground wheels mounted on the end portions of said arched axles, ground wheel actuated front and rear lifting devices operable optionally and independently of each other for swinging said axles to lift said frames, and disk gangs connected with said frames and arranged to be lifted from the ground by the swinging of said arched axles.

5. The combination with a ground engaging wheel, a frame movable vertically relatively to said wheel, soil turning devices carried by said frame, power devices comprising a link actuated by said wheel and adapted to bear against an abutment on said frame, said link having a longitudinal slot which receives such abutment and permits relative and endwise movement of said link



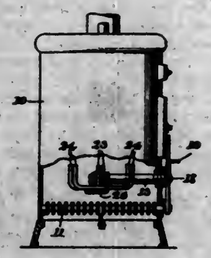
independently of the abutment within fixed limits, and means for adjusting the position of the abutment, the frame and soil turning devices being adapted to move vertically relatively to the power devices.

1,482,497. DIAL MECHANISM. RICHARD LESTER WILCOX, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 27, 1921. Serial No. 440,538. 6 Claims. (Cl. 10—6.)



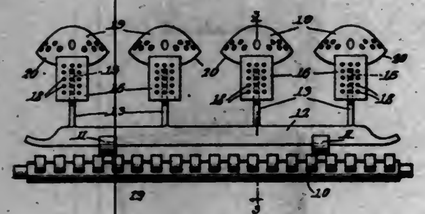
2. In combination, a movable carrier dial; a rock lever; means for actuating said rock lever in timed relation with said dial; a gripping member; and means for adjustably securing said gripping member upon said rock lever.

1,482,498. FAN FOR HYDROCARBON MOTORS. CHILDE HAROLD WILLS, Marysville, Mich. Filed Nov. 12, 1920, Serial No. 423,684. Renewed Sept. 20, 1923. 7 Claims. (Cl. 230—1.)



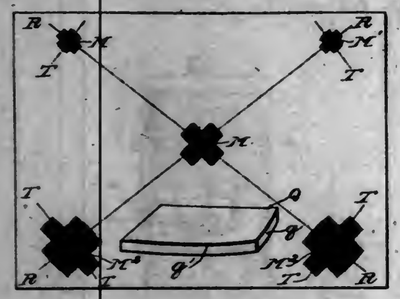
1. In a hydrocarbon motor, a fan, driving mechanism therefor, and connecting mechanism between the driving mechanism and said fan yieldable under end thrust of the fan.

1,482,499. FIRST-AID-PACKAGE ATTACHMENT FOR DINNER PAILS. WILLIAM EDWIN WOLFE, Wilder, Va. Filed Apr. 6, 1922. Serial No. 550,085. 3 Claims. (Cl. 220—23.)



1. A dinner bucket having a lid formed with an upwardly projecting receptacle, closed at the top and sides, and open at the bottom with a projecting bead at the top, said receptacle containing the necessary articles constituting a first aid package, and a thin sheet of metal hermetically fastened to the underside of he lid arodnd the edges of the receptacle and flush with the bottom to close the receptacle.

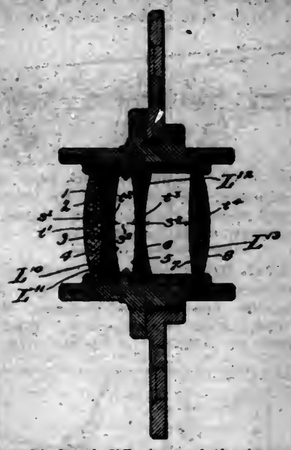
1,482,500. AGITATOR OR SHAKER FOR STOVES OR FURNACES. NICHOLAS J. ZUZULIN, Minot, N. Dak. Filed May 7, 1923. Serial No. 637,318. 6 Claims. (Cl. 126—173.)



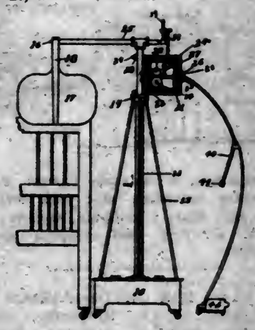
6. In an agitating device for a furnace, a sleeve adapted to be rigidly mounted in the furnace above the grate of the furnace and adapted to project through the furnace casing, a shaft rotatably mounted in the sleeve and projecting therebeyond at both ends, means on the outside end to turn the shaft, a cam carried by the inner end of the shaft, a pair of agitating members mounted on the cam, each agitating member comprising a substantially flat body portion having an opening to receive the cam and whose edges are curved so as to converge outwardly, and upstanding prongs carried by the outer ends of the body portion, and a supporting plate carried by the sleeve and arranged beneath the arms whereby when the shaft is turned the cam will coact with the curved edges of the body portions and the supporting plate in a manner to cause the arms to partake of a combined reciprocating and rocking motion.

1,482,501. ATTACHMENT FOR GRATES. NICHOLAS J. ZUSULIN, Minot, N. Dak. Filed July 11, 1923. Serial No. 650,787. 7 Claims. (Cl. 126—163.)

7. An attachment for grates comprising a longitudinal base, upright supporting members carried by said base and arranged at right angles thereto, spaced upstanding arms carried by said upright support, perforated shells having openings to receive the upstanding arms, said shells being removably supported by said arms above and spaced from the base, domes carried by the shells and extending laterally therebeyond, said domes being hollow and perforated, and transverse rockers carried by the base and adapted to rest on the grate, sections, whereby when the grate is shaken, a rocking motion will be imparted to the shells so as to agitate the fuel in the firebox.



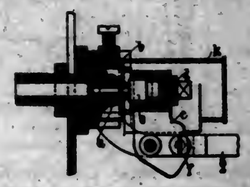
1,482,502. ART OF FORMING IMAGES AND PHOTOGRAPH PRODUCED THEREBY. ADELBERT AMES, Jr., Hanover, N. H. Filed Jan. 12, 1920, Serial No. 351,011. Renewed Aug. 3, 1923. 12 Claims. (Cl. 95—5.)



1. A photographic picture characterized by definition corresponding to the monocular perception of axial depth of the normal human eye at the center of interest, and by diffusion due to substantial optical aberrations of the image at other parts of the picture.

1,482,503. PHOTOGRAPHIC-LENS SYSTEM. ADELBERT AMES, Jr., Hanover, N. H. Original application filed Jan. 12, 1920, Serial No. 351,011. Divided and this application filed June 2, 1921. Serial No. 474,561. 20 Claims. (Cl. 88—57.)

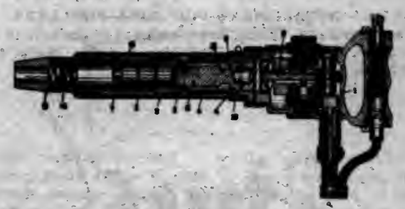
1. A lens system having refractive elements having surfaces formed and assembled to cause on a surface an image of an object field having therein different kinds of diffusion of the images of objects displaced from the object focused axially, which diffusions are substantially and respectively similar to the corresponding different kinds of diffusions of the image of objects similarly displaced formed on the retina of the human eye.



1,482,504. FAN. JOHN BECHTEL, Sr., Earlham, Iowa. Filed July 25, 1922. Serial No. 577,348. 3 Claims. (Cl. 230—1.)

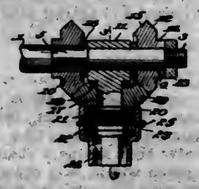
1. An improved fan comprising a base formed hollow, a filler within the base of sand or the like, an upright supported by the base, a fan operating mechanism supported on said upright, a fan for said mechanism, a muffler box supported on said upright comprising upper and lower hollow sound-deadening members for receiving said fan operating mechanism, and means for detachably clamping said members together.

1,482,505. FLOAT-CONTROLLED VALVE. JEAN BERGNER, Dusseldorf, Germany. Filed Aug. 24, 1921. Serial No. 494,956. 6 Claims. (Cl. 137—104.)



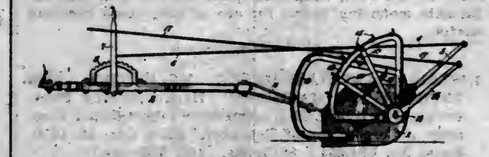
2. A float-controlled inlet valve comprising a body having a valve seat, a plug adapted to be applied against said valve seat so as to closely block the passage for the liquid, a float and a lever carrying same, said lever being hingedly connected to said body, a plug carrying lever also hinged to said body and means for coupling said float lever with said plug carrying lever.

1,482,506. CHILD'S CART. THOMAS R. BRADFORD, Sturgis, Mich. Filed May 2, 1923. Serial No. 637,962. 5 Claims. (Cl. 208—165.)



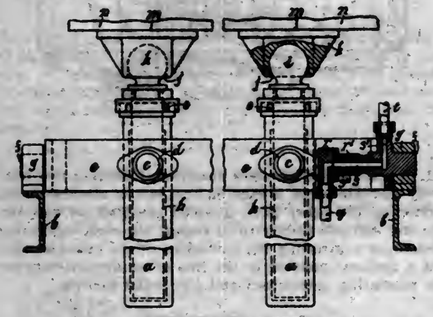
1. A child's cart comprising a seat supported upon a rear axle and wheels and a forward axle and wheels, a steering bar to steer the forward wheels, side members and a back member hinged to the sides and rear end of the seat and adjustable relative to said seat to form a variable child-supporting receptacle above said seat, strap loops carried by said respective side and back members, a strap threaded through said strap loops and having its ends adjustably united across the front of the seat to retain the side and back members in position and to secure a child in position on the seat.

1,482,507. PNEUMATIC HAMMER, DRILLING MACHINE, AND THE LIKE. EMIL COHN, Berlin, Germany. Filed June 3, 1922. Serial 565,702. 1 Claim. (Cl. 125—34.)



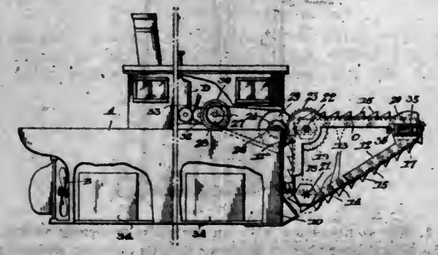
Mechanical pneumatic hammer, drilling tool or percussion tool arranged to have a motor drive or an electrical drive to be connected therewith, characterized by a cylindrical hammer casing, a compressor piston and hammer piston cooperating therewith, and an intermediary ring within the cylindrical hammer casing, said ring dividing said casing into two chambers, the said compressor piston being provided with a groove for the passage of the precompressed air from the compression chamber into the hammer piston chamber.

1,482,508. WRENCH. THOMAS J. COLLIHAN, Girardville, Pa. Filed Mar. 13, 1923. Serial No. 624,706. 1 Claim. (Cl. 81—57.)



A wrench comprising a rotatable stock, a sleeve fitted loosely on the stock, opposed fast and loose gears on the stock at opposite ends of the sleeve, a stud depending from the sleeve, an intermediate gear provided with a depending concentric rim on its under side spaced away from said stud rotatably mounted on the stud and meshing with the opposed gears, and a work-engaging socket having a hollow head fitting around and detachably secured to said rim.

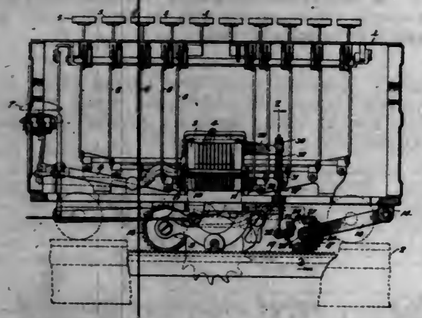
1,482,509. DUMPING DEVICE FOR SCRAPERS. CLOYD DAVIS, Mineola, N. Y. Filed Jan. 31, 1923. Serial No. 616,097. 10 Claims. (Cl. 37—140.)



1. The combination with a scraper, of an eccentric pivoted thereto and engageable with the ground to tilt the scraper body to dump its load.

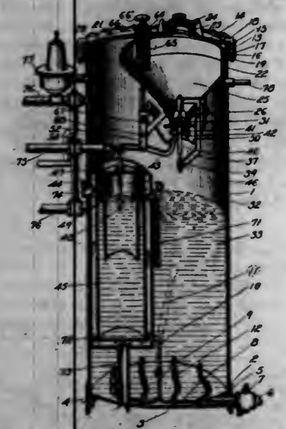
1,482,510. TIPPING GEAR FOR MOTOR ROAD VEHICLES. MAURICE FRED EDWARDS, Bolton, England. Filed Feb. 27, 1922. Serial No. 539,804. 2 Claims. (Cl. 298—22.)

1. In a tipping gear, a main supporting frame, a cross frame pivoted therein and provided with an axial supply passage for fluid, a hydraulic jack pivoted to rock in the cross frame crosswise of its pivots and provided with an axial supply passage for fluid, a supply pipe for fluid operatively connecting the axial supply passages of the cylinder and cross frame, a stuffing-box secured on the axis of the supply pivot of the cross frame and also provided with a supply passage for fluid, and means for connecting the other and stationary end portion of the stuffing-box with a supply pump.



1,482,511. ICE BREAKER. JOHN ALBERT ELLIS, Iberville, Quebec, Canada. Filed Dec. 20, 1922. Serial No. 608,130. 2 Claims. (Cl. 114—40.)

1. An ice breaker comprising in combination with the bow of a boat, supporting members on the boat, a plurality of spaced guide-ways mounted on the supports and designed to extend outwardly in triangular formation, rollers

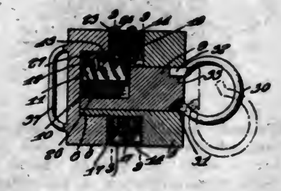


in said guide-ways and endless chains provided with ice gripping and breaking teeth mounted on said rollers, operating means for the chains comprising transversely extending shafts through said guide-ways having pulleys thereon designed to engage with the links of said chains, means connecting said shafts with suitable driving means on the boat whereby on the driving means being operated the teeth carrying chains are set in motion to engage with and break the ice in combination with the forward movement of the boat, ballasting tanks for the boat and adjustable mounting means for one of said chain carrying shafts.

1,482,512. CARRIAGE-BRAKE MECHANISM FOR TYPEWRITING MACHINES. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed Dec. 31, 1920. Serial No. 434,251. 8 Claims. (Cl. 197—64.)

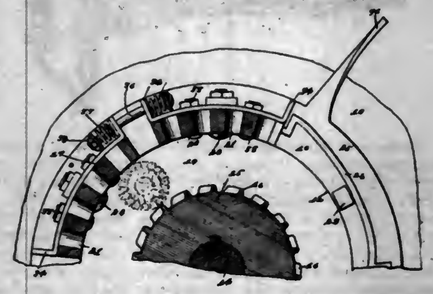
1. A machine of the class described, including two relatively movable parts, a rack on one part, a movable brake carrier on the other part, a brake mounted on the carrier and movable therewith to engage the rack, tabulating mechanism controlling the movement of the brake carrier, and a resilient member in the line of connection between the tabulating mechanism and the brake carrier.

1,482,513. ACETYLENE GENERATOR. OTTO N. GRIDELL, East Kansas City, Mo. Filed Oct. 22, 1920. Serial No. 418,689. 3 Claims. (Cl. 48—53.)



1. The combination with an acetylene generator casing, of a feed hopper therein having a bottom opening, swinging fingers hung about the edge of the opening, a vertically movable cone against which the lower ends of the fingers normally rest, and means for raising and lowering the cone.

1,482,514. PROCESS FOR THE COMMERCIAL PREPARATION OF AMINOPHENYLARSONIC ACIDS. MAURICE GUÉRIN, Paris, France. Filed Sept. 6, 1922. Serial No. 586,531. 1 Claim. (Cl. 260—14.)



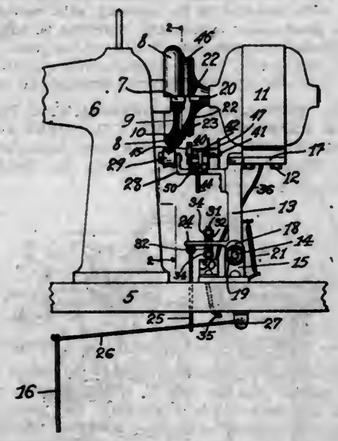
The process of manufacturing aminophenylarsonic acids and their substitution products by reducing a nitro phenyl arsonic acid, or a substitution product thereof, in alkaline solution by means of a reducing sugar.

1,482,515. COMBINATION LOCK. HERBERT M. HAINLINE, Sciota, Ill. Filed July 9, 1923. Serial No. 650,438. 2 Claims. (Cl. 70—112.)

1. A permutation lock including a sectional body portion, one of said sections having a threaded extension, the opposite extension having threads to receive the threaded extension to connect the sections, tumblers and locking disks supported on the threaded extension, a shackle supporting member movable through the body portion, locking dogs on the shackle supporting member and adapted to cooperate with the locking disks to restrict movement of the shackle supporting member, said locking disks having notches adapted to register to allow the locking dogs to move therethrough, and a pivoted shackle on the shackle supporting member.

1,482,516. ATTACHMENT FOR CORN SHELLERS. J EMIL HOFMANN, Orient, Iowa, assignor of one-half to H. J. Reha, Orient, Iowa. Filed May 8, 1923. Serial No. 637,430. 3 Claims. (Cl. 130—6.)

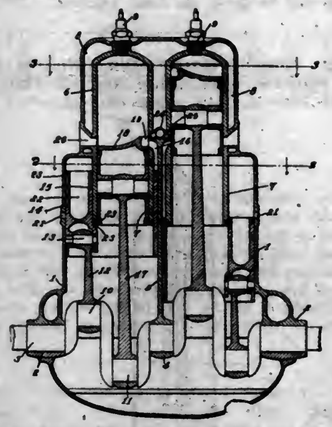
1. In a device of the class described, a support frame, a sheller cage formed of a series of segmental staves arranged in a cylindrical plane, means for loosely mounting said staves with their edges adjacent and slightly spaced apart, and yieldable means for holding the staves against outward radial movement and against their adjacent edges being separated.



1,482,517. SIGNAL VALVE. FRANK N. KELSEY, New Haven, Conn., assignor of one-half to Paul C. Swole, New Haven, Conn. Filed Feb. 26, 1923. Serial No. 621,384. 1 Claim. (Cl. 152—11.5.)

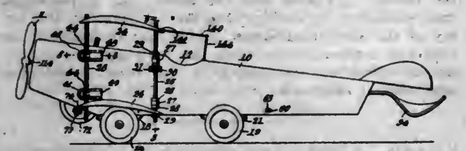
In a valve; a valve body having a chamber therein; a valve movably mounted within said chamber; means for holding said valve upon its seat by variable pressure; an auxiliary valve body at an angle to said valve body, having a port therethrough connected with the chamber in said valve body, and having means to connect the same to a tire valve head; and a reducing head with longitudinal grooves therein, movably mounted within

said auxiliary valve body, having a stem thereon that contacts with the stem within said tire valve head when said auxiliary valve body is connected therewith.



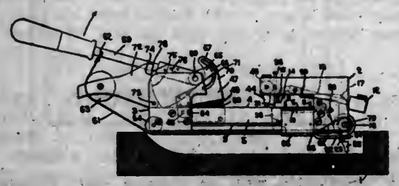
1,482,518. SEWING-MACHINE MOTOR. FREDERICK M LASERSON, Brooklyn, N. Y. Filed Aug. 13, 1920. Serial No. 408,339. 1 Claim. (Cl. 192—17.)

The combination with a sewing machine having a driving shaft and a driving wheel on said shaft, of a friction driving member inserted in the face of said driving wheel, a bracket pivoted adjacent the said sewing machine, said bracket having a motor base extending in a direction away from the said sewing machine and a brake arm extending towards the said sewing machine, a brake member secured to said brake arm, a motor mounted on said motor base, the combined weight of the said motor and motor base tending to automatically move the said motor away from operative relation with the said sewing machine and to move the said brake member into braking relation with the said sewing machine driving wheel, a spring for assisting the movement aforesaid, a driving wheel secured to the shaft of the said motor, and mechanism for operating the said bracket to cause the face of the said motor driving wheel to engage the said friction member in the face of the sewing machine driving wheel to drive the said sewing machine from the said motor with the motor shaft and the sewing machine driving shaft in axial alinement.



1,482,519. INTERNAL-COMBUSTION ENGINE. LOUIS LEONARD LUCH and LEROY MATTSON, Portland, Oreg. Filed Oct. 1, 1921. Serial No. 504,546. 6 Claims. (Cl. 123—65.)

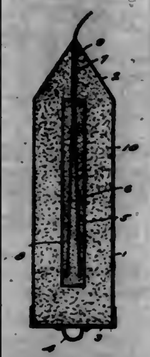
1. In an internal combustion engine the combination with a casing having cylindrical portions, of spaced cylinders integral with the casing and having guide portions constituting extensions thereof and eccentrically mounted within the cylindrical portions of the casing, charging pistons mounted for reciprocation between said guide portions and the wall of the cylindrical portions of the casing, a firing piston mounted for reciprocation within each cylinder and its extension, a port for directing fuel from the path of each charging cylinder into



the path of each firing cylinder, a fuel supply port adapted to be opened and closed by each of the charging pistons, an exhaust port in each cylinder, said firing pistons constituting means for opening and closing the exhaust and intake ports and those ports feeding fuel into the cylinders.

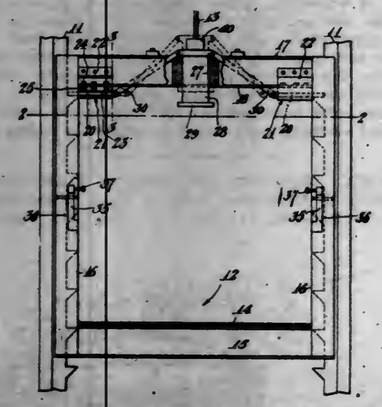
1,482,520. AEROPLANE. KYLE LYON, Spencer, N. C., assignor of one-third to Thomas W. Smith and one-third to Adam J. Clement, both of Rowan County, N. C. Filed June 19, 1922. Serial No. 569,461. 4 Claims. (Cl. 244—14.)

1. In an aeroplane, a fuselage, a chassis supporting the same, propelling means carried by the fuselage, a pair of supporting planes disposed upon opposite sides of the fuselage, upstanding rock shafts connected with the supporting planes and arranged near their rear edges and connected with the fuselages, positive means to turn the rock shafts, upstanding lock shafts connected with the supporting planes near their forward edges, sliding bolts to engage the lock shafts and hold them against movement, and means to operate the sliding bolts.



1,482,521. MACHINE FOR JOINING FILM STRIPS. HENRY E. MCELWAIN, Holyoke, Mass. Filed Feb. 1, 1921. Serial No. 441,656. 26 Claims. (Cl. 154—42.)

4. In a machine for joining film strips, the combination with means to apply moisture to the emulsion on a film strip, of means to remove the moistened emulsion,

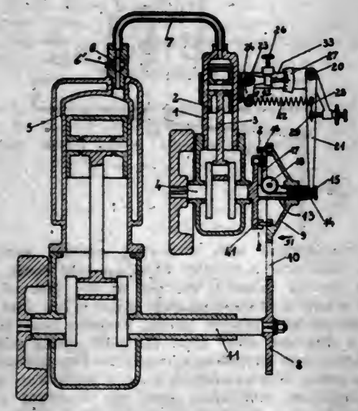


a pair of relatively-movable clamping members, each having a shearing edge, a shearing member rigid with each clamping member and forming therewith a slot to receive the film, and means to move the clamping members thereby to cause the shearing members to sever the film ends and to press the films together.

1,482,522. FIRE EXTINGUISHER. WILLIAM N. MORRISS, Waterloo, Iowa. Filed Nov. 12, 1921. Serial No. 514,724. 1 Claim. (Cl. 169—28.)

As a new article of manufacture, a fire extinguisher comprising an exterior casing formed of stiff paper treated to resist dampness including a cylindrical side wal and a conical closure extension formed on the forward end of the side wall, a rigid metal cap secured to the rear end of the side wall acting as a closure for the casing, a handle secured to said rigid metal cap, an axially disposed longitudinally arranged cartridge positioned in the casing in spaced relation to the side wall, the conical extension and the metal cap, a protecting tube extending forwardly from the cartridge to the vertex of the conical extension, and a fuse disposed in the tube and communicating with the cartridge and extending exteriorly of the casing at the vertex portion of said conical extension.

1,482,523. SAFETY ATTACHMENT FOR ELEVATORS. ELIJAH RASBY, Los Angeles, Calif. Filed Mar. 23, 1921. Serial No. 454,788. 1 Claim. (Cl. 187—92.)



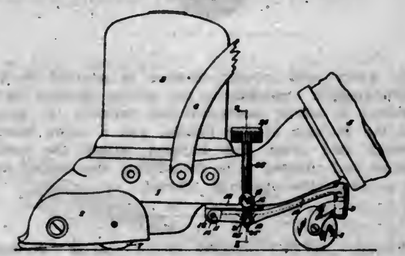
In combination with an elevator shaft including a vertical rack on the side thereof; an elevator car including a pair of standards between which said rack extends; a weighted dog pivoted in one of said standards; and a handle on said dog for swinging the same across said rack into a slot in the other standard and against the upper end of said slot for arresting the descent of said elevator.

1,482,524. BIN SHOVELER. FRED ROBINSON, Duluth, Minn. Filed Jan. 6, 1923. Serial No. 610,972. 4 Claims. (Cl. 214—17.)

1. In combination with a storage chamber having a discharge opening formed therein, a discharging conveyor adapted to be removably associated with the opening in the chamber, said conveyor having a portion adapted to be inserted in the opening, said portion serving as a pivot about which the conveyor is adapted to revolve during its operation.

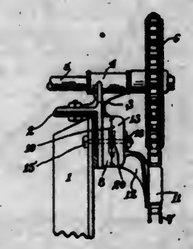
1,482,525. INDICATOR FOR DETERMINING THE AVERAGE PRESSURE IN THE CYLINDERS OF PISTON MACHINES. EMIL SCHIMANEK, Budapest, Hungary. Filed Sept. 3, 1921. Serial No. 498,473. 5 Claims. (Cl. 73—186.)

1. An indicator for determining the mean effective pressure of the working cylinder of a piston engine, comprising a valveless indicator-motor, means to connect the cylinder-space of the said indicator-motor with the cylinder-space of the engine to be tested, means causing the indicator-motor to run in synchronism and phase coincidence with the engine to be tested and means to measure the force necessary to keep the indicator-motor in synchronism with the engine to be tested when connected with the cylinder of the latter.



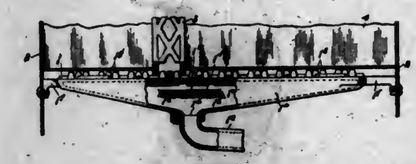
1,482,526. TURBINE UTILIZING ELASTIC MOTIVE FLUIDS. EDWIN SCHLUMPF, Zurich, Switzerland, assignor to the Firm Aktiengesellschaft der Maschinenfabriken Escher Wyss & Cie., Zurich, Switzerland. Filed Mar. 2, 1922. Serial No. 540,429. 6 Claims. (Cl. 253—78.)

1. In a turbine utilizing elastic motive fluids, a casing enclosing at least one runner-wheel chamber, at least one nozzle ring arranged within the casing, and branches for the admission of motive fluid to the nozzle ring, said branches being cast in one piece with the casing and the nozzle ring and forming the only connecting part



between these two bodies, the nozzle ring being otherwise surrounded by the motive fluid contained in said runner-wheel chamber.

1,482,527. CASTER. WALTER S. SIMPSON, Canton, Ohio, assignor to The United Electric Company, Canton, Ohio, a Corporation of Ohio. Filed Apr. 17, 1922. Serial No. 553,863. 6 Claims. (Cl. 16—34.)

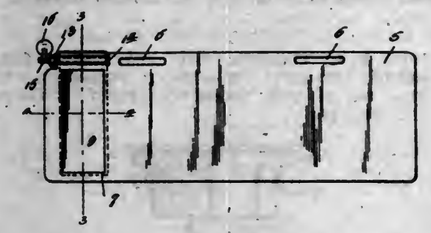


1. A caster for vacuum cleaners or the like including an arm pivoted thereto at one end and having a caster at the other end bearings on the cleaner and arm and an adjusting screw on one of the bearings and swivelled to the other bearing.

1,482,528. CHAIN OR BELT TIGHTENER. CHARLES N. STONE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Apr. 3, 1922. Serial No. 549,283. 7 Claims. (Cl. 64—5.)

1. In a device of the character described, the combination with a support, of two circular members mounted on the support and having plane surfaces opposed and normally in contact, one of said members rigid with said support and the second member rotatably adjustable, a series of radial grooves in the plane surface of each member, means to hold said members together, means interlocking with two directly opposite grooves to hold the adjustable member from rotation, and an arm extending from said adjustable member and movable therewith.

1,482,529. GAS BURNER. JOHN R. TAYLOR, Mansfield, Ohio, assignor to The Hartman-Spreng Company, Mansfield, Ohio, a Corporation of Ohio. Filed May 31, 1922. Serial No. 564,993. 4 Claims. (Cl. 158—104.)



1. A gas burner and manifold including outwardly tapering end portions and an intermediate portion of relatively large cross-sectional area having a fluid inlet spaced nearer one tapered end portion than the other, and a fluid feed pipe extending along and approximately parallel with the further spaced tapered end portion to compensate for the initial flow of the combustible fluid into the opposite or shorter tapered portion of said manifold.

1,482,530. DENTIMETER. RICHARDSON H. TAYLOR, Meeker, Colo. Filed Aug. 21, 1922. Serial No. 583,187. 5 Claims. (Cl. 33—179.)

1. A measuring instrument comprising, in combination, a body member having two relatively movable legs connected thereto at one end and having their other ends free, said legs having openings through their free ends adapted to receive a wire, and means for anchoring the ends of the wires.

1,482,531. LICENSE PLATE. LAWRENCE T. THORN, Harrisburg, Ark. Filed Feb. 26, 1923. Serial No. 621,251. 2 Claims. (Cl. 40—63.)

1. In a license tag wherein the same is formed adjacent one end with an opening, a removable year plate positioned upon said tag and rearwardly of said opening, said year tag being formed with a record sheet pocket and means for securing said year plate to said license tag.

1,482,532. STAMPING HAMMER. WALTER TIMINSKI, Duluth, Minn. Filed July 31, 1920. Serial No. 400,355. 1 Claim. (Cl. 101—29.)

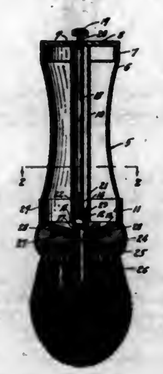
A stamping hammer having a heavy metal head, a handle fitted thereto, a transversely extending slot in a striking face of said head, said slot extending to a lateral face of the head and along said lateral face, a pivot member fitted in said head and extending through said lateral portion adjacent the handle, a lever fitted

on said pivot, one end of said lever closing the open end of the slot on the striking face, and adapted to engage a stamping die fitted in said slot, the other end

of the lever extending adjacent the head and a spring fitted in a recess in the head urging said end of the lever away from the head.

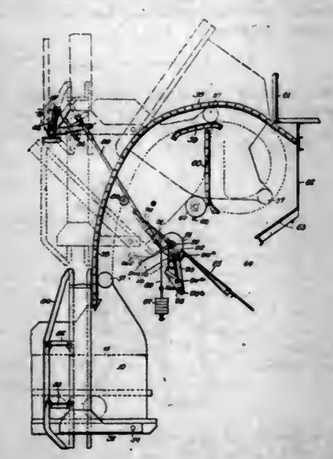
1,482,533. COMBINED BUMPER SUPPORT, TIRE-CARRIER SUPPORT, AND SPRING-ATTACHING DEVICE. WILLIAM K. WISE, Tulsa, Okla. Filed Jan. 29, 1923. Serial No. 615,773. 10 Claims. (Cl. 293—55.)

1. In combination with a chassis having a frame including a transversely extending rear end member and a tank secured thereto and projecting rearwardly therefrom, an attachment therefor comprising a pair of arms adapted to be rigidly secured to the frame at opposite sides thereof and having their ends extending rearwardly and downwardly therefrom, and a brace bar rigidly connecting the rear ends of said arms and disposed rearwardly of the tank in alignment therewith.



1,482,534. CLOSURE FOR STORAGE-BATTERY CELLS. JOSEPH L. WOODBRIDGE, Philadelphia, Pa. Filed Feb. 24, 1922. Serial No. 538,957. 3 Claims. (Cl. 220—44.)

1. A vent closure for storage battery cells comprising in combination a cell cover having a flaring wall providing a filling opening and terminating in an inturned ledge, an externally cylindrical cap overhanging one end of said wall and spaced from the cover and seated on the ledge to provide for ventilation at all times, and spacing ribs between the cylindrical portion of the cap and the face of the flaring wall.

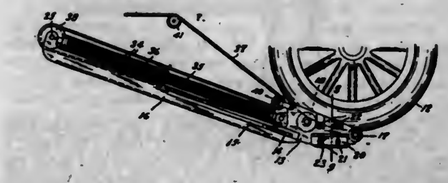


1,482,535. FOUNTAIN BRUSH. VIRGIL LEONARD WOODS, Williams, Calif. Filed July 19, 1922. Serial No. 576,062. 4 Claims. (Cl. 15—138.)

1. A fountain brush of the character described comprising a tubular handle open at its opposite ends and having a removable cover at one end and a brush head at the opposite end, the brush head including a flexible nozzle extending into the bristles of the brush, a tubular member attached to the cover and removable therewith and extending into the handle to a position adjacent to the base of the nozzle, a conical member disposed in the base of the nozzle and projecting into the handle

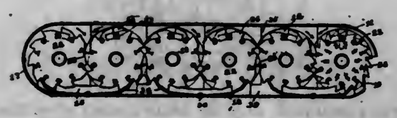
with which said tubular member is adapted to have screw-threaded engagement, the conical member having openings to afford communication between the nozzles and the interior of the handle, and a valve inserted through said cover and disposed within the tubular member and adapted to be forced into the conical member to close the openings thereof.

1,482,536. OVERTURNING MINE CAGE. ANDREWS ALLEN, Chicago, Ill. Filed Jan. 21, 1921. Serial No. 438,844. 8 Claims. (Cl. 214—122.)



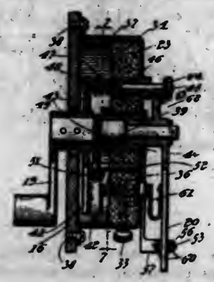
1. In combination, a mine cage, an L-shaped bail adapted to support said mine cage, a pivotal mounting for said bail and said cage at one side of the center of gravity of the said cage, a curved track and means at the upper portion of said cage for engagement on the under-side of the said track whereby the said cage is dumped during the hoisting operation.

1,482,537. WREATH. LEO ALTER, Chicago, and GABRIEL STANYO, Congress Park, Ill. Filed Jan. 31, 1923. Serial No. 616,026. 4 Claims. (Cl. 41—12.)



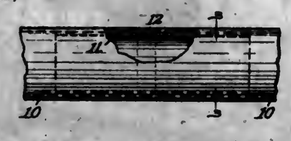
1. A wreath made up of a plurality of sections arranged end to end and each comprising a core and an ornamental covering for the core, one of each two meeting ends of the cores having a part projecting beyond the covering thereon and overlapping the core of the other section behind the covering on the latter.

1,482,538. EMERGENCY BRAKE FOR MOTOR VEHICLES. THOMAS A. ARNOLD, Tacoma, Wash. Filed Oct. 24, 1921. Serial No. 509,881. 5 Claims. (Cl. 188—4.)



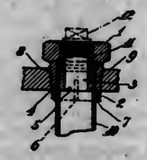
1. Brake apparatus of the class described including brake shoe supporting devices of channel shaped cross section pivoted at their forward ends to the forward portion of a vehicle frame, the side flanges of said brake shoe supporting devices being slotted to form longitudinally extending guideways toward their rear ends, brake shoes movable lengthwise within said brake shoe supporting devices and arranged to receive and support the rear wheels of a vehicle, flanges on the side of said brake shoes arranged to travel in said slotted guideways, resilient means for urging said brake shoes rearwardly and cable means for moving said brake shoes forwardly.

1,482,539. COUNTER. JOSEPH H. BAIR, Philadelphia, Pa. Filed Oct. 29, 1917. Serial No. 198,958. 5 Claims. (Cl. 235—74.)



1. In a counter the combination of a series of rotatably mounted counter disks parallel to each other but not coaxial and having a carrying relation between them, two terraced housing covers with their corresponding faces parallel and conforming to each other and adapted to confine between these conforming faces the respective counter disks as described.

1,482,540. SIGNAL DEVICE FOR AUTOMOBILES. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1917. Serial No. 175,514. 14 Claims. (Cl. 177—337.)

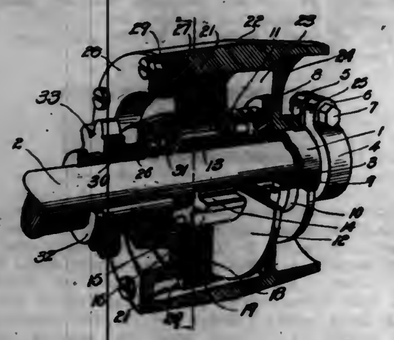


1. The combination with an automobile having a steering gear, of two electric lights one on each side of the automobile for indicating the turnng movement thereof, manually-controlled switch means for selectively controlling the lighting of said lights to indicate either right or left-hand turning, releasable means for causing the light lighted to remain lit, and means controlled by said steering gear for controlling said switch means and for releasing said releasable means.

1,482,541. WELDED COLUMN AND PROCESS OF MAKING IT. LE ROY BRAISTED, Wellesley, Mass., assignor to Milford Iron Foundry, Milford, Mass. Filed Aug. 14, 1922. Serial No. 581,608. 2 Claims. (Cl. 219—10.)

1. As an article of manufacture, a welded iron concrete filled column consisting of a plurality of pipe ends placed end to end in registration with each other and provided with an inner pipe of the same material fitting the inside of the pipe ends all around and located at the joint between them, the abutting ends of the pipe ends being welded together and the weld extending to the surface of the said inner pipe, whereby that is welded to both of the pipe ends.

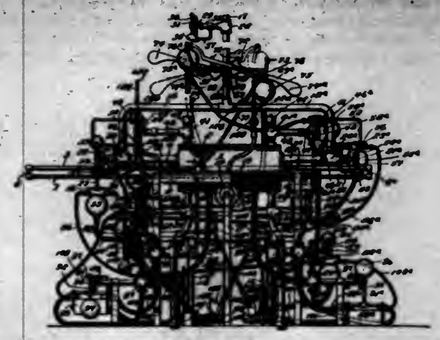
1,482,542. BUSHING FOR TUBULAR RADIATORS. WILLIAM J. BUETTNER, Carnegie, Pa. Filed Apr. 17, 1922. Serial No. 554,011. 4 Claims. (Cl. 285—48.)



1. In combination with a tubular radiator, a plurality of tubes; end-plates positioned at each end of said tubes and engaged thereby; a plurality of centrally apertured bushings for securing said tubes in said end-plates; said bushings having two spaced concentric shells for engaging said tubes therebetween, the outer shell being resilient, tapered and threaded outwardly for engagement with said end-plates and smooth and straight inwardly; the inner shell being straight and smooth all over.

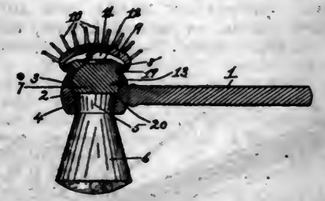
1,482,543. PNEUMATIC TOOL. RALPH B. BUTTERBAUGH, Minneapolis, Minn., assignor to Reuben E. Hauser, Minneapolis, Minn. Filed Apr. 25, 1921. Serial No. 464,481. 3 Claims. (Cl. 74—14.)

1. A portable power device comprising a casing, an oscillatory sleeve projecting from said casing, a rotary motor-driven shaft mounted in said casing and projecting through said sleeve, said sleeve and shaft being arranged to operate different tools, a lever pivoted within said casing and connected to said sleeve for oscillating the same, and an eccentric element carried by said shaft and directly operative on said lever to oscillate the latter.



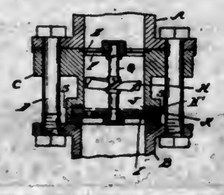
1,482,544. CLUTCH. ARTHUR W. CAPS, Topeka, Kans., assignor, by mesne assignments, to O. D. Collis, Clinton, Iowa. Filed Sept. 20, 1920. Serial No. 411,419. 2 Claims. (Cl. 192—69.)

1. In combination, a shaft, a sleeve on said shaft having a split end, a contractible collar about the split end to contract the same into frictional engagement with the shaft, an outstanding spring seat carried by the sleeve, a pulley having a hub interposed between the spring seat and the collar whereby the hub may have rotative movement with respect to the shaft but be held against longitudinal movement, a plurality of interleaving clutch laminations carried by the pulley and the sleeve respectively, one end wall of the pulley serving as an abutment, a longitudinally movable, clutch actuator on the sleeve, an expansion spring interposed between the actuator and the spring seat, and a longitudinally shiftable releaser sleeve on the shaft for exerting pressure against the actuator in opposition to the expansive force of the spring.



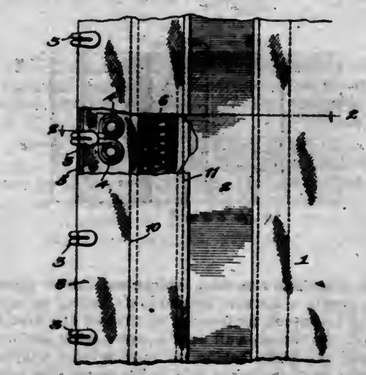
1,482,545. HYDRAULIC MOTOR. JOSÉ MA. CALLEJAS, Habana, Cuba. Filed Oct. 23, 1919. Serial No. 332,780. 6 Claims. (Cl. 121—126.)

1. In a hydraulic motor, a cylinder, a piston therein, valves to control the admission of water to and its discharge from opposite ends of the cylinder and thereby cause the piston to move, and valve operating means including water weight vessels, means to normally raise



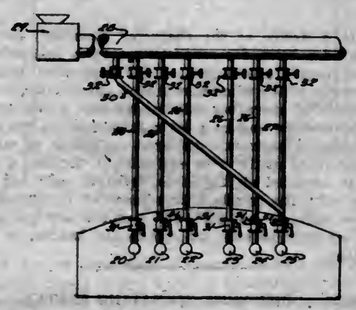
said water weight vessels, and means to control the supply of water to and the discharge of water from said water weight vessels.

1,482,546. LATHERING UTENSIL. FRANK C. CURTIS, Troy, N. Y. Filed Jan. 8, 1916, Serial No. 70,947. Renewed July 19, 1923. 5 Claims. (Cl. 15—110.)



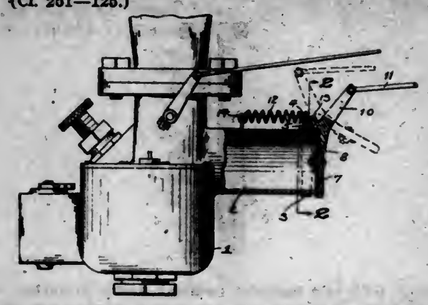
1. A lathering utensil comprising a head provided with a bore, a handle projecting laterally from the head, a body of bristles projecting from one end of the bore, the body and head having means for preventing relative movement between the head and bristles in one direction; a finger-pad formed with a recess, and a plug secured in the other end of the bore and having a peripheral flange outside the bore extending into said recess of the finger-pad, whereby the plug prevents escape of the bristles from the bore and secures the pad to the head.

1,482,547. GOVERNOR FOR INTERNAL-COMBUSTION ENGINES. BRADFORD A. DELL, Detroit, Mich., assignor to Monarch Governor Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 26, 1920. Serial No. 369,000. 1 Claim. (Cl. 137—152.)



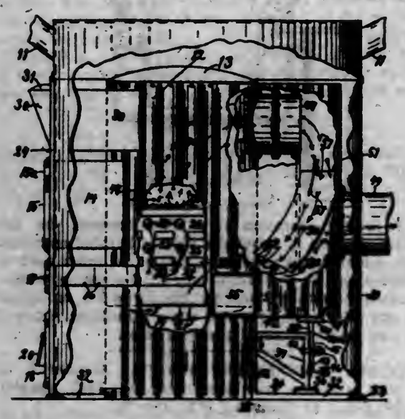
The combination with the intake conduit of an internal combustion engine, of a throttle therein comprising cooperating register plates, one plate being movable, a shaft for said movable plate, an annular member in said conduit and concentric to the axis of said shaft, a spring within said annular member and connected thereto, said spring being also connected to said shaft and normally retaining said movable plate in open position, and means on said shaft adapted to be operated by the increased velocity of the fluid passing through said conduit for actuating said movable plate towards closed position, said conduit having a slot therein, said annular member having a recess therein registering with said slot and adapted to receive a tool for adjusting said annular member whereby the tension of said spring may be regulated.

1,482,548. CORSET. MOSES MOODY DOWNES, Bridgeport, Conn., assignor to La Resista Corset Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 25, 1922. Serial No. 603,158. 3 Claims. (Cl. 2—74.)



1. The hereindescribed improvement in the construction of the meeting front sections of a corset, including an elastic strip extending the full length of the corset and stitched along its inner side edge to the front body portion of each section to form a part thereof, a pair of opposed fabric strips each stitched along their inner vertical side edges to the outer vertical side edge portion of each elastic strip, fastening means secured between each pair of strips along the outer vertical side edge portions thereof, said pairs of strips being connected by intermediate lines of stitching, which latter form pockets adjacent to the outer vertical side edge of the elastic strips, and a stiffening stay in each pocket.

1,482,549. DISTRIBUTION OF FUEL. HENRY F. EASTER, Hayden, Ariz., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed July 30, 1921. Serial No. 488,662. 12 Claims. (Cl. 266—38.)

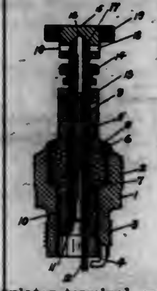


1. The method of smelting ore in a reverberatory furnace which consists in introducing ore adjacent the side walls of the furnace to form sloping embankments, and feeding pulverized fuel thereto under pressure in quantity greater adjacent the embankments.

1,482,550. VALVE. GEORGE ESOPH, Jr., Tennis, S. Dak. Filed July 16, 1921. Serial No. 485,168. 2 Claims. (Cl. 251—125.)

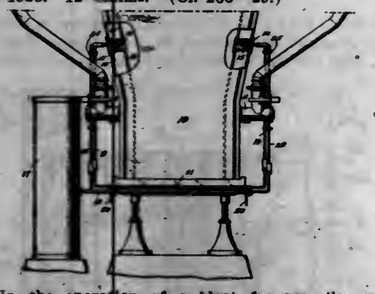
1. An attachment for carbureters embodying an air inlet tube having an open end comprising a split clamping yoke adapted to be engaged upon the end of the tube and when engaged to have its adjacent ends spaced, means extending through said ends for clamping the yoke upon the tube, and a valve pivoted upon said means for closing the end of the tube.

1,482,551. HOT-AIR FURNACE. GEORGE A. GERMAIN and JOHN W. GELLENBECK, St. Paul, Minn. Filed Sept. 20, 1922. Serial No. 589,438. 3 Claims. (Cl. 126—99.)



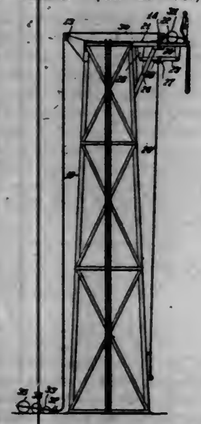
1. In a furnace, the combination with a base, a furnace body secured to the base, a radiator secured with its upper portion to the furnace body, one or more devices supporting the lower end of the radiator, each of said devices composed of two members secured one to the base, the other to the radiator and having each a vertical ratchet rack arranged to slide on the teeth of the other rack, one of said racks having a vertical slot, the other having a bolt movable in the slot and provided with a spring washer and a nut for holding the racks engaged in a manner allowing them to slide automatically on each other when subjected to a certain degree of force.

1,482,552. SPARK PLUG. OBY A. GODWIN, Birmingham, Ala. Filed July 5, 1921. Serial No. 482,346. 2 Claims. (Cl. 123—169.)



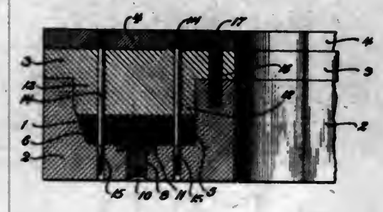
1. In a spark plug, a shell having an insulator mounted therein, the inner end of the insulator being adapted to fit snugly in the bore at the inner end of the shell and having its inner end formed with an upwardly tapered recess, a tubular electrode having its lower end beveled to form a continuation of the taper of the recess and extending from the apex of said recess through the bore of the insulator and having a narrow integral segmental ex-

tension projecting into said recess to form a sparking terminal, a sparking terminal on the shell adapted to



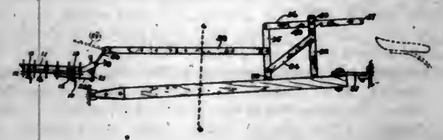
co-act with said insulator terminal, means to anchor the tube in the insulator, and means to close the open upper end of the tube.

1,482,553. FURNACE OIL BLAST. CLARENCE ALFRED GRABILL, El Paso, Tex., assignor to American Smelting & Refining Company, a Corporation of New Jersey. Filed Feb. 12, 1919, Serial No. 276,591. Renewed Sept. 26, 1923. 12 Claims. (Cl. 266—29.)



1. In the operation of a blast furnace, the process which consists in forming a ring of burning carbonaceous fuel confined to a position adjacent the inner wall of the furnace and at the fusion zone of the charge within the furnace thereby to prevent the formation of accretions on the sides of the furnace while permitting a free draft up the center of the furnace interior.

1,482,554. AMUSEMENT DEVICE. ERNEST T. GUNDLACH, Chicago, Ill. Filed Sept. 17, 1921. Serial No. 501,389. 14 Claims. (Cl. 46—70.)

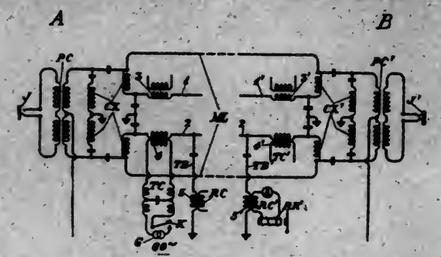


1. In an amusement apparatus, the combination of an elevated structure, and a cable movably supported at the top of the structure provided with means for attaching it to a person and with means comprising elements which are effective, successively, to oppose the weight of a person falling from said structure so as to gradually counterbalance the weight of said person.

1,482,555. MOLD FOR MAKING FABRIC DISKS FOR VEHICLE WHEELS. ALLEN E. HALL, Philadelphia, Pa., assignor to Hall Wheel Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 10, 1922, Serial No. 593,568. Renewed Dec. 26, 1923. 2 Claims. (Cl. 18—42.)

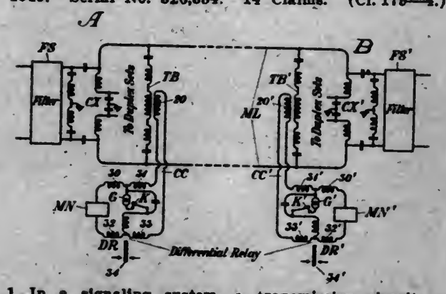
1. In a mold for making vulcanized fabric disks for vehicle wheels, a metallic bottom plate having an annular recess of a contour conforming to that of the disk to be produced, the bottom wall of the recess being perforated; a metallic top plate having an annular part adapted to take into and fit the upper part of the recess and provided with perforations adapted to register with the perforations in the bottom plate, and a follower plate having pins adapted to take through the perforations in the top plate and into the perforations in the bottom plate.

1,482,556. DEVICE FOR CONTROLLING DRAWN IMPLEMENTS FROM THE SEAT OF A TRACTOR. JOHN A. HALL, Lebanon, Ohio. Filed Apr. 9, 1921. Serial No. 460,110. 3 Claims. (Cl. 56—10.)



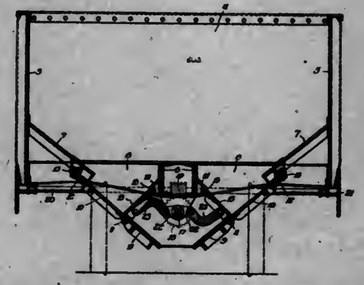
1. In a device of the character described, the combination of a hitch for connecting a farm implement to a tractor, control mechanism on the implement, comprising an element which when moved in a characteristic manner is capable of operating said mechanism, a rod connected to said element and to a lever fulcrumed on the hitch, a substantially horizontal pull rod connected to said lever and provided at its free end with a handle, a guiding bracket mounted on the hitch, whereby said rod is supported with the handle within reach of the driver of the tractor while in his seat, and a notch and pin arrangement whereby to lock the rod to the bracket in desired positions.

1,482,557. COMPOSITE SIGNALING SYSTEM. BAXTER P. HAMILTON, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 23, 1919. Serial No. 325,682. 4 Claims. (Cl. 179—4.)



1. In a signaling system, a telephone transmission line, composite apparatus including Morse legs for transmitting Morse signals over one side of said telephone

line, similar apparatus including Morse legs for transmitting Morse signals over the other side of said line,

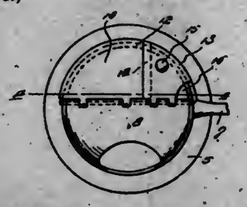


and carrier apparatus associated with said Morse legs for transmitting alternating carrier currents modulated by signals through said Morse legs and over said line.

1,482,558. ALTERNATING-CURRENT SIGNALING APPARATUS. BAXTER P. HAMILTON, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 26, 1919. Serial No. 326,554. 14 Claims. (Cl. 179—4.)

1. In a signaling system, a transmission circuit, a tuned bridge across said circuit, transmitting and receiving apparatus associated with said transmission circuit only through said bridge, and means for maintaining said transmitting and receiving apparatus conjugate with respect to each other.

1,482,559. HOPPER CAR. HARRY S. HART, Chicago, Ill. Filed Aug. 4, 1921. Serial No. 489,697. 10 Claims. (Cl. 105—251.)

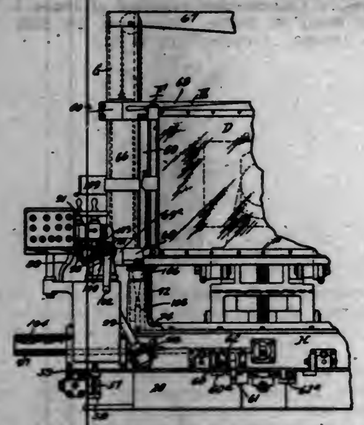


1. A car of the class described having its floor between the trucks in the form of a longitudinally extending hopper, said hopper comprising sides sloping downwardly and inwardly from the sides of the car to a point below the center sill, the lower edge of said hopper sides being spaced apart, and means for selectively discharging the entire portion of the load in the hopper either through this lower spaced portion of the hopper or toward the sides of the car.

1,482,560. MAN'S NECKWEAR. JAMES A. HEWES, Melrose, Mass., assignor to Hewes & Potter, Boston, Mass., a Copartnership composed of James A. Hewes and Frank W. Potter. Filed Aug. 10, 1922. Serial No. 580,893. 1 Claim. (Cl. 2—11.)

In a made up necktie the combination of a large end 3 having an eye, a small end 4 and a neckband 5 connecting said ends, said neckband consisting of a thin and narrow strip of smooth and hard finished material, one extremity of said neckband being secured to one of said ends, and the other extremity being provided with a hook to engage the eye in the other end of the tie, and a transverse loop secured to the large end 3 of said tie, the small end 4 lying within and extending below said loop when the tie is being applied and adjusted to the collar, and free to slide longitudinally through said loop.

1,482,561. CUP. BERTHA E. HODGKIN, Russellville, Ind. Filed May 10, 1923. Serial No. 638,143. 1 Claim. (Cl. 65—13.)



In an article of the class described, a cup having a semi-circular wall formed at the upper edge thereof and closing a portion of the opening in the cup, said wall being provided in the central portion adjacent the edge of the cup with an outlet opening for fluid, a pair of cooperating cover sections hingedly connected with the semi-circular wall of said cup, said sections forming a semi-circular cover for the open portion of said cup, one of said sections having the adjacent edge of the other section offset for interfitting relation with the edge of said other section, and said other section being provided with a cut-away portion and a handle whereby said other section may be moved on its pivot independently of the first mentioned section.

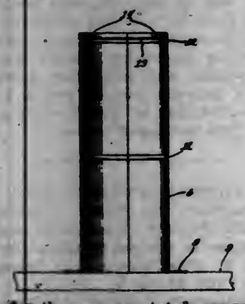
1,482,562. ADJUSTMENT-INDICATING MEANS FOR PHOTOGRAPHIC-PRINTING APPARATUS AND OTHER APPARATUS. WILLIAM C. HUEBNER, Buffalo, N. Y., assignor to Huebner-Bleistein Patents Company, Buffalo, N. Y. Filed May 9, 1921. Serial No. 467,957. 10 Claims. (Cl. 88—24.)

1. In a photographic printing apparatus, the combination with an adjustable member, of a graduated scale and a microscope, one of which devices moves with said ad-

justable member past said other device, and a screen in fixed relation to said microscope on which said micro-

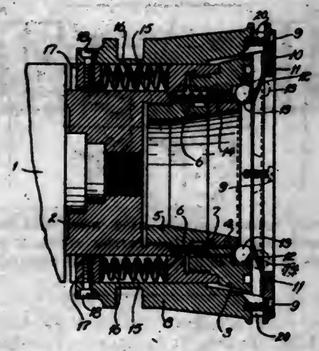
scope projects an enlarged image of the portion of said scale opposite the microscope.

1,482,563. SUPERHARDENED STEEL AND PROCESS FOR PRODUCING THE SAME. AXEL GUSTAF EMANUEL HULTGREN, Gottenborg, Sweden. Filed June 15, 1920. Serial No. 389,182. 17 Claims. (Cl. 148—12.)



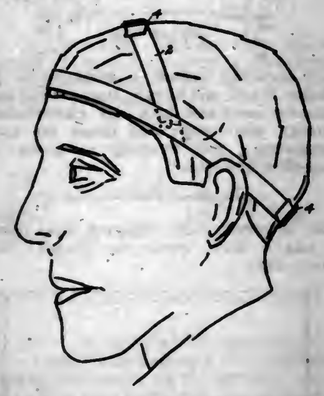
1. The method which consists of forming a steel article, then hardening the same, and then subjecting such article to a rolling pressure for superhardening the steel thereof at and adjacent the surface.

1,482,564. HOSE CLAMP. NORMAN ISACHSON, Albion, Idaho. Filed Feb. 13, 1923. Serial No. 618,853. 6 Claims. (Cl. 24—19.)



1. A clamp of the character described, comprising a divided wire ring having slidably contacting overlapping ends, and a divided clamping band having a shallow internal groove to receive said ring, and means for contracting said band upon said ring.

1,482,565. MOLD FOR CONCRETE STRUCTURES. CHARLES E. JOHNSON and WILLIAM W. FIELDS, Cleveland, Ohio. Filed May 14, 1923. Serial No. 638,824. 2 Claims. (Cl. 25—131.)



1. A device for the purpose stated, comprising a sheet metal sleeve provided with slits forming tongues bent out to form supporting feet at the bottom and a removable cap plate at the top.

1,482,566. CHUCK. JEREMIAH KELLER, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Sept. 2, 1922. Serial No. 585,931. 7 Claims. (Cl. 279—1.)

1. A chuck comprising a body having a bore with a flaring outer end and having an abutment in said bore for annular work, a circular series of balls arranged to bear against the flaring wall of said body and said work, a spring pressed ring slidable longitudinally in said bore outside of said work, and means for exerting pressure inwardly against said balls, the outer end edge of said ring being beveled and bearing against said balls.

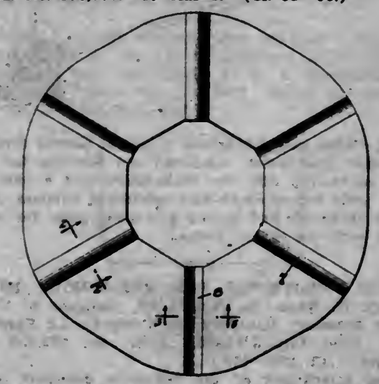
1,482,567. HAIR HOLDER. VOLNEY E. KIRK, Los Angeles, Calif. Filed July 3, 1922. Serial No. 572,582. 6 Claims. (Cl. 132—46.)

2. A device of the character described comprising a brow encircling band, and a second band rigidly fixed to the sides of said brow band at an angle of approximately forty-five degrees and arranged to extend over the top of the head from one side thereof to the other, so as to rest upon and extend crosswise of hair extending rearwardly from the forehead.

1,482,568. FOUNTAIN PEN. JOHN H. KRITIKSON, Chicago, Ill., assignors, by mesne assignments, to Kritikson Bros., Inc., Chicago, Ill., a Corporation of Illinois. Filed June 27, 1921. Serial No. 480,828. 5 Claims. (Cl. 120—46.)

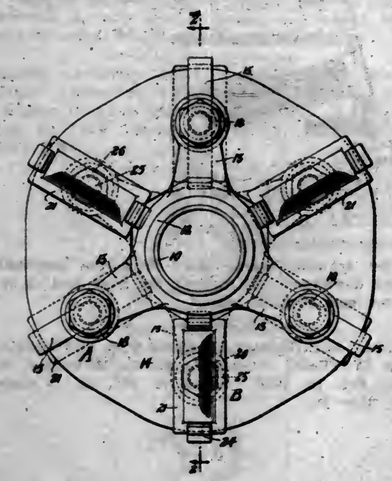
2. In a means for controlling the collapse and expansion of an ink reservoir for fountain pens, the combination of a lever, having laterally extending arms arranged between the ends of said lever and providing a pivot for said lever, a presser bar arranged at one end of said

lever, the opposite end of said lever extending longitudinally and latterly and curved in the plane of its length and having a slot which extends lengthwise of



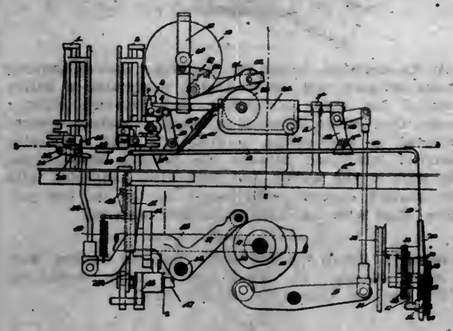
said last mentioned end, and means for engaging and actuating said lever, said means being movable endwise of said barrel.

1,482,569. BOX CORNER. BERTHOLD A. LANGE, St. Louis, Mo. Filed Jan. 16, 1922. Serial No. 529,525. 1 Claim. (Cl. 93—58.)



A pair of dies for creasing material therebetween to form box corners, one of said dies being provided with a die face presenting a pair of spaced projections defining a cup-shaped depression, said die being adapted to be moved toward the other die at an angle oblique to the plane of the material, and the other die being provided with a die face presenting a plurality of projections defining relatively spaced apart cup-shaped depressions adapted to be entered by the said projections respectively, of the first-mentioned die, one of the said projections of the said other die being adapted to enter the cup-shaped depression of the said first-mentioned die, whereby the said material is creased with alternate bends and with an increase in material gathered at the intermediate bend.

1,482,570. FLEXIBLE DISK. HARRY P. MACDONALD, Montclair, N. J., assignor to Snead & Company, a Corporation of New Jersey. Filed July 15, 1920. Serial No. 396,374. 47 Claims. (Cl. 64—96.)

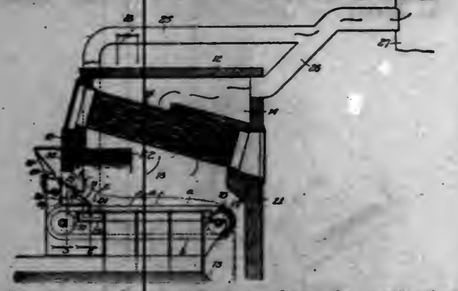


1. A flexible torque transmitting universal joint disk constructed with a laterally raised surface deformation forming a clamping seat for receiving the lateral pressure of a gripping device.

1,482,571. FLEXIBLE JOINT. HARRY P. MACDONALD, Montclair, N. J., assignor to Snead & Company, a Corporation of New Jersey. Filed July 15, 1920. Serial No. 396,375. 21 Claims. (Cl. 64—96.)

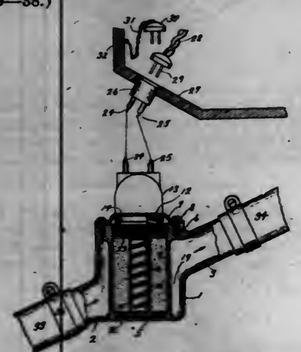
1. In a flexible joint, the combination of a spider having an aperture, a disc, and means connecting the disc to the spider including a sleeve-like portion fitting said aperture, together with a stud threaded in said sleeve.

1,482,572. BANDING MACHINE. FRANCIS X. MALOCSAY, Saddle River, N. J., assignor to William Steiner Sons & Company, a Corporation of New York. Filed Apr. 19, 1920, Serial No. 375,006. Renewed July 12, 1923. 16 Claims. (Cl. 91—54.)



1. A device of the character described, comprising label-holding means, a member carrying a coating of a dry adhesive, means for rendering the adhesive capable of separation from the member, and means for transferring the adhesive from the member to a label carried by the label-holding means.

1,482,573. FURNACE. THOMAS A. MARSH, Chicago, Ill., assignor to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed Feb. 25, 1921. Serial No. 447,810. 3 Claims. (Cl. 110—40.)



1. In a furnace having a combustion chamber, the combination of a progressive feed grate therein, inclined means for feeding fresh fuel on said grate, said means having an opening therein, a conduit located

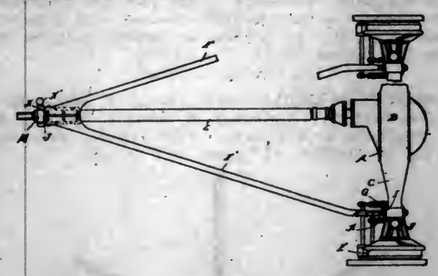
beneath said inclined means and opening upward toward the same, and means for placing said conduit under suc-

tion for drawing heated gases from the combustion chamber downward and through the fresh fuel as it is fed over said inclined means.

1,482,574. ELECTRICAL HEATER FOR AUTO RADIATOR SYSTEMS. STARKE L. MEYER, Milwaukee, Wis. Filed Feb. 16, 1920. Serial No. 359,142. 3 Claims. (Cl. 219—38.)

1. An electrical heater for the water cooling systems of an internal combustion engine comprising a fitting adapted for water circulation and provided with a socket from which water is excluded, a heating element mounted in said socket, a di-electric heat conducting material interposed between the heating element and the wall of the socket, and feed wires connected with the heating element, said socket having its end portions lined with non-heat conducting material.

1,482,575. SHOE PROTECTOR. THOMAS BENTON MURPHEY, Chicago, Ill. Filed Feb. 6, 1922. Serial No. 534,450. 8 Claims. (Cl. 36—72.)

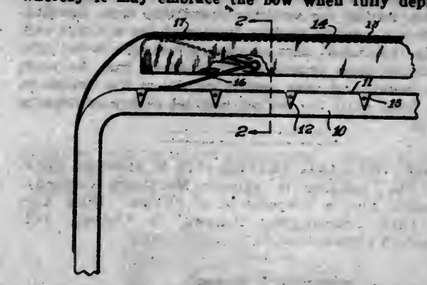


1. A shoe protector comprising a sandal having freely overlapping rear sole portions adapted to be slid upon each other to permit the sandal to be contracted about the arched portion of a shoe and having flexible fastening members secured to the sandal and of ample length for extending around the back of the shoe and around the arched shoe portion to prevent the sandal from sliding off and to effect the said contraction of the sandal.

1,482,576. SECTIONAL GRAIN SPOUT. WILLIAM C. MYERS, Des Moines, Iowa. Filed Dec. 26, 1922. Serial No. 609,084. 4 Claims. (Cl. 198—26.)

1. A grain spout including a main section bent to form an incomplete tapered tube, a removable section arranged to fit snugly against the outside and overlap edges of the main section for forming with the main section a complete tube, means for fastening said main and removable sections together, said means including a pair of studs fixed on said main section near two of its corners, a pair of bolts on the other two corners of said main section, the removable section having notches in one of its edges adapted to receive said studs and openings formed near its opposite edge for receiving said bolts, the parts being so arranged that the removable section may be slid into position by engagement with the studs and locked against accidental removal by the securing of said bolts, as specified.

1,482,577. REAR AXLE. OWEN M. NACKER, Detroit, Mich., assignor of one-half to Alanson P. Brush, Detroit, Mich. Filed June 4, 1917, Serial No. 172,815. Renewed Dec. 3, 1920. Serial No. 428,153. 14 Claims. (Cl. 180—65.)

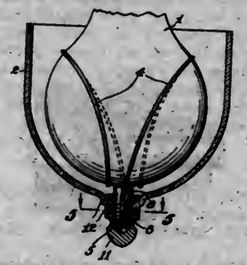


1. A vehicle axle, comprising a central portion formed of pressed sheet-metal, reinforced end portions for directly connecting with the brake-heads, and a pair of torque arms connected to said reinforced portions converging forwardly and having a common point for connection with the vehicle frame.

1,482,578. PROTECTOR FOR AUTOMOBILE TOPS. FRANK H. NASH, La Fayette, Ga., assignor to Nash Auto Accessory Manufacturing Company, La Fayette, Ga. Filed July 5, 1922. Serial No. 572,896. 2 Claims. (Cl. 296—118.)

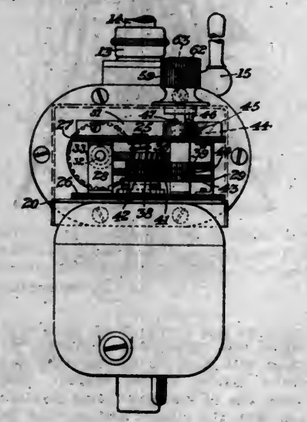
1. An attachment of the character described comprising a supporting strip adapted to be attached to and extend longitudinally of the upper edge face of the bow of a vehicle top, a member U-shaped in cross section and adapted to bear against the under face of the

cover of the vehicle top and having sufficient width whereby it may embrace the bow when fully depressed,



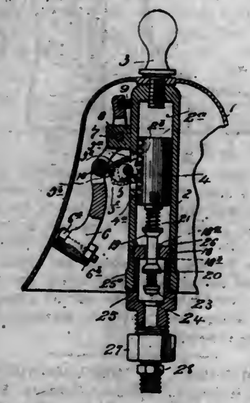
and springs each attached at one end to said supporting strip and at the other to said member and resisting the downward movement of the member.

1,482,579. BALL-BEARING WHEEL. BUDD G. NICE, Ogontz, Pa. Filed Jan. 5, 1923. Serial No. 610,815. 4 Claims. (Cl. 64—36.)



1. A ball bearing wheel comprising in combination a pair of duplicate concave disks each having a cylindrical axially ranging marginal flange and a flat radially ranging marginal flange, the flat radial flanges being arranged in facial contact to provide a ball race, webs of ring form arranged face to face and each centrally provided with a flange consisting of an offset flat radially ranging portion and of a concave portion, the faces of said radial portions and of said radial flanges being in contact and the rims of said concave portions and the peripheral surface of said axial flanges being in contact, with clearance space at the rims of the radial flanges, to insure alignment of the elements of the wheel, a hub having a ball groove, balls in said groove and race, and means for securing the webs together.

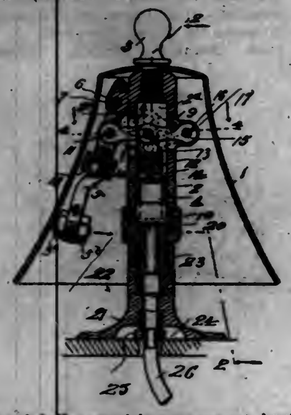
1,482,580. SHADE-SUPPORTING MEANS. EBEN F. OLIVER, Jersey City, N. J., assignor to Korrectolite Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 23, 1922. Serial No. 602,723. 2 Claims. (Cl. 240—138.)



1. The combination with an electric bulb, of a spring clip to clasp the bulb, a downwardly projecting loop on said spring clip forming a yoke extending below the tip of the bulb, a carrying member having an abutment portion abutting against the tip of the bulb and having vertical slots in its side wall below the abutment portion, said loop passing outside the abutment portion and into the slots aforesaid to draw the carrying member against the bulb, a shade having a central opening through which the carrying member passes, and means for securing the shade to the carrying member.

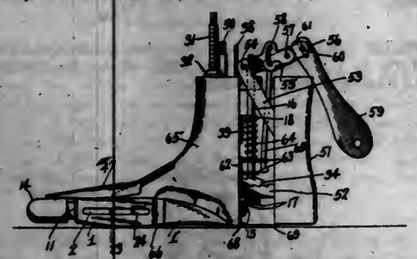
1,482,581. AUTOMATIC POWER-SHUT-OFF MECHANISM. JOHANNES TH. PEDERSEN, Flushing, N. Y., assignor to Aaron M. Sloss, New York, N. Y. Filed Jan. 20, 1921. Serial No. 438,808. 7 Claims. (Cl. 192—142.)

1. In an automatic power shut-off mechanism and in combination, a motor, a shaft driven thereby, a revoluble member mounted freely on said shaft, a switch for opening and closing a circuit to the motor and which switch is normally maintained in an open position by the said revoluble member, and means by which the said revoluble member may be turned a partial revolution to operate the switch to close the circuit to the motor.



1,482,582. SIGNAL BELL. SAMUEL C. RODESS, New York, N. Y. Filed May 12, 1922. Serial No. 560,284. 12 Claims. (Cl. 116—151.)

9. A signal bell comprising a support, having a passage for fluid pressure, a bell, a clapper, a movable member carried by the support, means to cause said member to actuate the clapper, said member being provided with a stem, valves slidable upon said stem and spaced apart in said passage, seats carried by said support for said valves, said stem being operative freely through said

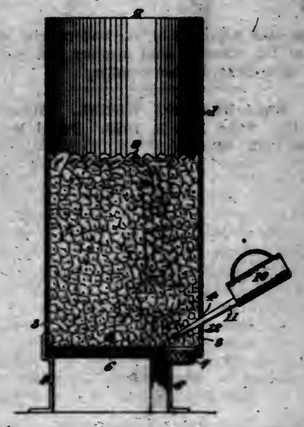


seats, and springs interposed respectively between one of said valves and said member and between the other valve and a stop on said member, said stem having spaced stops for said valves, and means to admit fluid pressure and exhaust to said passage.

1,482,583. SIGNAL BELL. SAMUEL C. RODGERS, New York, N. Y. Filed Aug. 15, 1922. Serial No. 581,936. 6 Claims. (Cl. 116—151.)

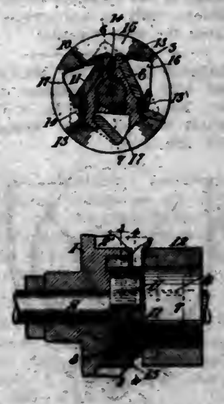
4. A signal bell comprising a support having a bore and provided with slots on opposite sides, a bell, a clapper pivotally carried by the support, links operative in said slots, one of said links being pivotally connected at one end with the clapper and another link pivotally connected at one end with the support, a member reciprocative within said bore and pivotally connected with adjacent ends of said links and means to actuate said member.

1,482,584. EXPANSIBLE SHOE LAST. CARL SCHEVITZ, Jacksonville, Fla. Filed Feb. 21, 1921. Serial No. 446,654. 8 Claims. (Cl. 12—128—3.)



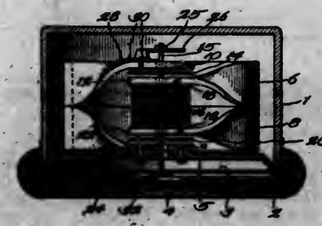
1. A shoe last of the class described comprising a main frame, a heel frame, a rack bar connected with the heel frame and slidably supported in the main frame, a ratchet plate engaging said rack bar, a lever pivotally supported on the main frame and connected with the heel frame, a handle for rocking the lever for moving the heel frame and means connecting the handle with the plate for lifting said plate out of engagement with the rack bar when the handle is manipulated to move the heel frame inwardly.

1,482,585. METHOD OF DECARBONIZING FERRO ALLOYS. HUGH C. SICARD, Niagara Falls, N. Y., assignor to United States Ferro Alloys Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 15, 1922. Serial No. 544,026. 4 Claims. (Cl. 74—45.)



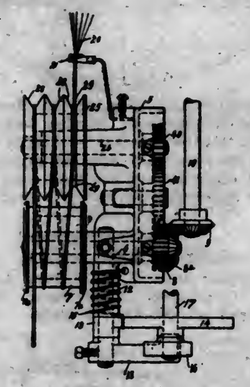
1. A method of decarbonizing ferro alloys by bessemerization comprising the addition to the usual materials charged into an electric furnace for the production of the desired ferro alloy a sufficient quantity of titaniferous ore to protect the metal in the alloy from oxidation during the smelting operation, then charging this mixture into an electric furnace of the arc type and smelting the charge, then pouring the molten metal into a converter and simultaneously adding lime to such molten metal, and then subjecting the molten metal to an air blast until the desired reduced carbon content is obtained.

1,482,586. ORCHARD HEATER. LEE B. SKINNER, Dunedin, Fla., assignor to Skinner Machinery Company, Dunedin, Fla., a Corporation of Florida. Filed Apr. 16, 1923. Serial No. 632,386. 2 Claims. (Cl. 126—59.5.)



1. An orchard heater comprising a casing, provided in its side wall with a draft opening and a fire igniting orifice, and a fire supporting grate within the casing, and provided adjacent its peripheral edge with a liquid fuel receiving receptacle wholly within the casing.

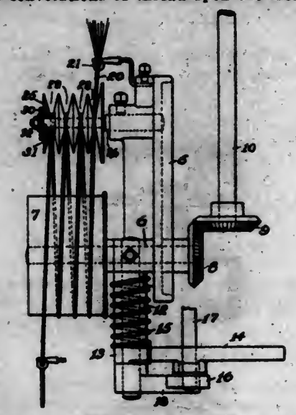
1,482,587. SAFETY RING. HENRY L. SMITH, Dunedin, Fla., assignor to Skinner Machinery Company, Dunedin, Fla., a Corporation of Florida. Filed May 16, 1923. Serial No. 639,468. 2 Claims. (Cl. 192—71.)



2. A clutch consisting of cooperating rotatably mounted drive and driven members, a clutch dog pivotally carried by one member, its free end adapted for swinging movement to engage the other member to cause said clutch members to rotate in unison, means movable over said clutch dog to engage the same to cause its disengagement from the other clutch member to permit the free rotation of one of said members relative to the other and a notched plate overlying the clutch dog and rotatably mounted therewith for precluding longitudinal movement of the clutch dog and permitting its free swinging movement into engaged and released position.

1,482,588. TELEPHONE RECEIVER. GEORGE M. STRATTON, Salt Lake City, Utah. Filed Sept. 12, 1922. Serial No. 587,701. 5 Claims. (Cl. 179—119.)

1. In a receiver for telephones and the like, a diaphragm, an electro magnetic coil having a movable core connected to the diaphragm for operating it, armatures secured to the core at opposite ends of the coil, and magnets having poles of opposite polarity on opposite sides of the armatures.

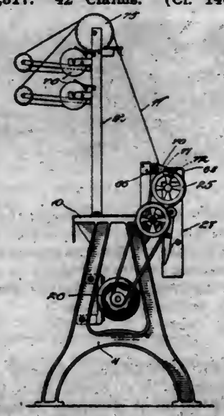


1,482,589. THREAD SPREADER FOR DOUBLING MACHINES. PACIFIC J. THOMAS, Pittston, Pa. Filed Mar. 25, 1922. Serial No. 546,675. 1 Claim. (Cl. 117—21.)

In a thread-spreading mechanism, the combination with a fixed guide and a smooth-surfaced cylindrical thread roll having end guard flanges, of an interposed parallel spreading roll having a series of V-shaped circular grooves adapted to widely spread the thread convolutions, roll driving means adapted to impart the same speed of rotation to the thread contacting surfaces of both the smooth-surfaced and grooved rolls, and means actuated by the breaking of a thread for automatically throwing said roll-driving means out of operation.

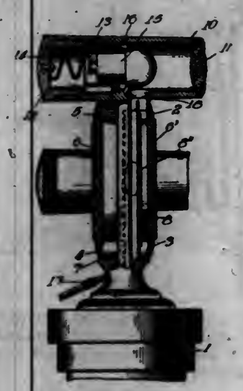
1,482,590. THREAD SPREADER FOR DOUBLING MACHINES. PACIFIC J. THOMAS, Pittston, Pa. Filed Jan. 31, 1922. Serial No. 532,970. 2 Claims. (Cl. 117—21.)

1. In a thread-spreading mechanism, the combination with a fixed thread-guide, a smooth-surfaced cylindrical roll, and driving means for said roll arranged to be automatically thrown out of operation by the breakage of a thread; of an interposed roller cooperatively mounted parallel with said smooth surfaced roll to positively spread successive convolutions of thread upon the latter, said interposed roller being provided with a series of deep V-shaped circular grooves whereby the diameter at the base of said grooves is greatly reduced relative to the diameter of said smooth-surfaced roll.



1,482,591. METHOD OF MAKING POLYSIDED COILS. CHESTER H. THORDARSON, Chicago, Ill. Filed Oct. 27, 1920. Serial No. 420,049. 6 Claims. (Cl. 140—92.2.)

1. The improvement in the method of producing polysided coils, by a winding operation, which embraces the step of preforming the wire exterior to the coil and independently of the winding to overcome subsequent unwinding of the coil.



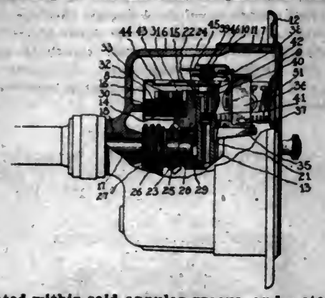
1,482,592. MACHINE FOR WINDING COILS. CHESTER H. THORDARSON, Chicago, Ill. Filed Nov. 20, 1920. Serial No. 425,317. 42 Claims. (Cl. 140—92.2.)

2. In a winding machine for polysided coils, a bobbin, means to support and rotate the bobbin, and laying-on means for the wire embracing a rotative guiding and a

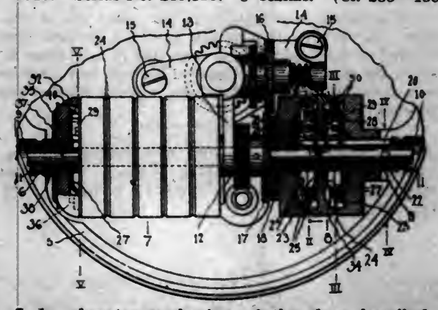
rotative wire preforming member exterior to the coil and about both of which the wire is led to the coil, the latter nearest adjacent to the coil.

1,482,593. MOTOMETER. ANDREW C. WOOD, Chicago, Ill. Filed July 29, 1921. Serial No. 488,434. 8 Claims. (Cl. 240—2.)

1. In a device of the kind described and in combination, a motometer comprising a casing having a thermometer stem therein, a vertical partition substantially enclosing said stem and extending to one side thereof, said stem enclosing portion of the partition having an aperture therethrough, said casing having openings in the opposite faces thereof to receive covers therein, a housing at the upper end of said casing having an opening communicating with the interior of said casing, said housing being open at its ends, a lens arranged in one of the open ends of said housing, detachable closure means for the other ends of said housing, and a lamp removably positioned within said housing whereby said lamp may be illuminated so that the light therefrom is directed through said communicating openings into said casing compartments so as to illuminate said stem.



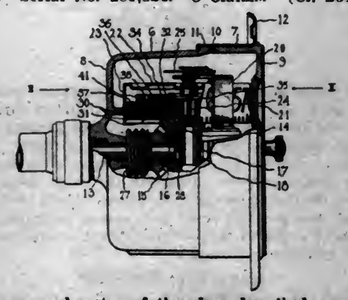
1,482,594. GRAIN-BUNDLE SHOCKER. HARRY BAXTER, Newman, Ill. Filed Nov. 29, 1920. Serial No. 427,221. 30 Claims. (Cl. 56—419.)



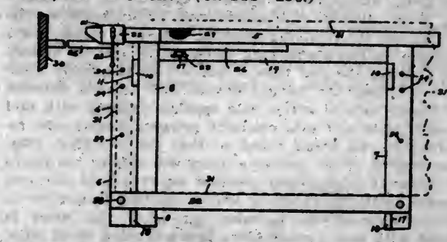
1. An automatic shocker, comprising the combination of a receptacle arranged to receive grain bundles from a binder, a shock-former for forming groups of bundles into a shock and depositing the formed shock on the ground, and means for intermittently pushing the bundles from said receptacle into said shock-former.

1,482,595. SPEEDOMETER. JOSEPH BERGE, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Apr. 14, 1919. Serial No. 289,822. 4 Claims. (Cl. 264—13.)

1. In a speedometer of the class described, a speed cup having an end wall, a peripherally extending annular side wall extending at right angles to said end wall, an annular groove formed in the material of said end wall, a stop lug located within said annular groove, and a stop member with which said stop lug engages.

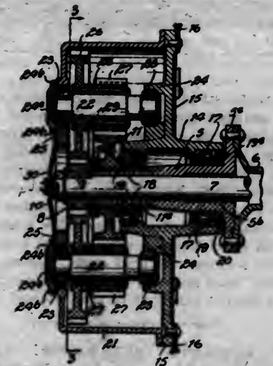


1,482,596. ODOMETER MECHANISM. JOSEPH BERGE, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Apr. 14, 1919. Serial No. 289,823. 8 Claims. (Cl. 255—139.)



7. In odometer mechanism of the class described, a carry-on pinion supporting member having two walls spaced apart from one another, said walls having aligned openings to receive a shaft whereby said member is supported, and other aligned openings adapted to provide bearings for supporting the ends of a shaft of a carry-on pinion.

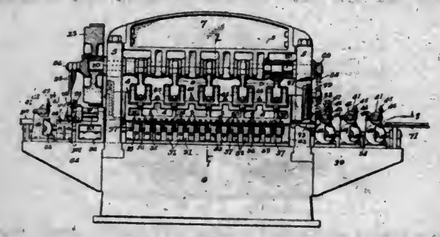
1,482,597. SPEEDOMETER. JOSEPH BERGE, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Apr. 14, 1919. Serial No. 289,824. 8 Claims. (Cl. 264—13.)



1. In a speedometer of the class described, a rotating armature having a plurality of teeth upon its periphery, and a thermostatically controlled compensating member carried by said armature and movable relative to the teeth thereof and adapted to vary the magnetic flux flowing therethrough; and a stationary magnet the poles of which are located adjacent the periphery of said armature.

1,482,598. CARPENTER'S TRESTLE. STEPHEN CONDON, Spencer, Iowa. Filed Feb. 27, 1922. Serial No. 539,615. 1 Claim. (Cl. 144—286.)

A trestle embodying a flat top, supporting legs on opposite sides thereof, means on one end portion of the top to hold against displacement an element resting thereon to be planed, a board positioned between the legs and resting against the under side of the top, and provided with a longitudinal slot, a bolt extended through the slot and into the top secure said board releasably to the top, whereby said board may be extended from the end of the top to engage an abutment to hold the trestle against movement in the direction of the abutment.

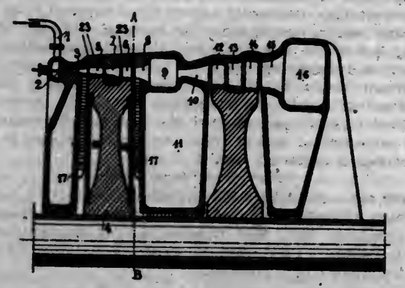


1,482,599. POWER-TRANSMITTING GEARING. GEORGE W. CURTIS, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed June 19, 1922. Serial No. 569,300. 4 Claims. (Cl. 74—7.)

1. In a motor vehicle, an axle housing, a traction wheel sleeved on said housing and adapted to receive journal bearings in the opposite ends of its hub portion, an axle shaft in said housing and projecting endwise therefrom, a pinion on the projecting end of said axle shaft, double planet gears journaled on said traction wheel for rotation therewith and on their own axes, and a sun gear on said axle housing, said double planet gears comprising a gear meshing with said axle shaft pinion and a gear meshing said sun gear outside of the hub portion of said traction wheel, the innermost hub bearing being mounted on the axle housing and the outermost hub bearing being mounted on an elongated hub portion of said sun gear.

1,482,600. METHOD OF AND MACHINE FOR PRODUCING EXPANDED-SHEET-METAL ARTICLES. LEWIS E. CURTIS, Warren, Ohio, assignor to Milwaukee Corrugating Company, Greenfield, Wis., a Corporation of Wisconsin. Filed Sept. 30, 1921. Serial No. 504,336. 15 Claims. (Cl. 164—6.5.)

1. The method of producing expanded sheet-metal articles which consists in advancing a sheet step by step lengthwise of slits aligned to be cut therein a distance of a plurality of slits to each step, and simultaneously after each successive advance movement of the sheet



cutting a series of longitudinally aligned slits in each of a number of parallel series, the slits in each series alternating with those of adjacent series.

1,482,601. METHOD OF MAKING WATER-SOFTENING MATERIAL. SVEIN DAHL-RODE, Brooklyn, N. Y. Filed Feb. 9, 1923. Serial No. 618,120. 6 Claims. (Cl. 23—13.)

1. The method of making a water softening compound, which consists in mixing iron furnace slag in powdered form with caustic soda, then adding water and boiling the mixture to the consistency of a thick paste, then drying out the mixture, and treating the same with a boiling solution of sodium silicate.

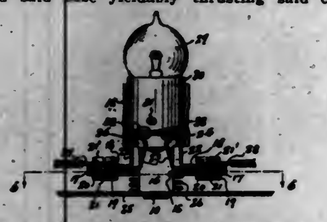
1,482,602. STEAM TURBINE. MARCEL DE CONINCK, Le Havre, France. Filed Mar. 9, 1921. Serial No. 450,864. 2 Claims. (Cl. 253—69.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

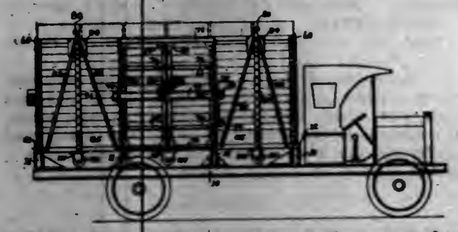
1. In a steam turbine, the combination with a number of admission nozzles, of a bladed rotor, a partition having in it groups of diffusing blades, another set of directing nozzles, intermediary chambers between the said partition and the second set of directing nozzles and communicating with the said diffusing blades and with the said directing nozzles, and radial partitions between two adjacent chambers.

1,482,603. ELECTRIC-LAMP SOCKET. FREDERICK A. FAULHABER, Jr., East Orange, N. J. Filed June 7, 1922. Serial No. 566,479. 4 Claims. (Cl. 173—328.)

1. In a device of the kind described, a bayonet type tubular socket member having inwardly off set leg members projecting longitudinally from its inner end, said leg members being spaced apart and together forming a socket standard of substantially polygonal outline in cross section, a carrying plate of insulating material having a central opening for engaging the same over said socket standard for vertical movement toward and away from the lower end of said socket member, means for

connecting the lower ends of said leg members with a base, a compression spring intermediate said carrying plate and said base yieldably thrusting said carrying





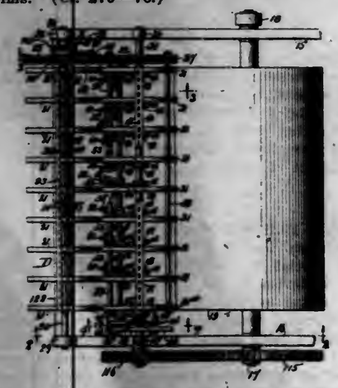


plate toward said socket member, and contact means supported on said base to engage the terminal means of a lamp inserted in said socket member.

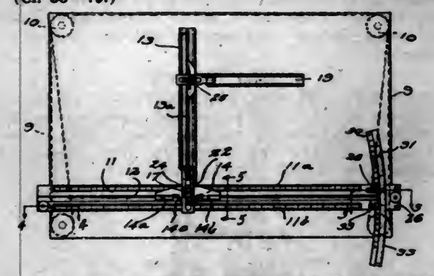
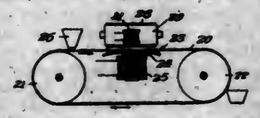
1,482,604. REMOVABLE AUTOMOBILE BODY. BENJAMIN F. FITCH, Evanston, Ill. Filed June 28, 1920. Serial No. 392,337. 1 Claim. (Cl. 296—28.)



The combination with a container having a base, four side walls and a roof, of vertically extending straps having the lower ends thereof secured to the base, and having the intermediate portions thereof attached to the side walls, there being two of said straps on each side of the container, outwardly facing hooks integral with said straps and projecting above the eaves of said roof, plates attached to the side walls and disposed intermediate the walls and straps adjacent the top portions thereof, and inclined struts having the upper ends thereof rigidly connected to said plates and the lower ends thereof attached to said base, whereby the load may be supported at concentrated points from the hook members and be distributed uniformly over said base.

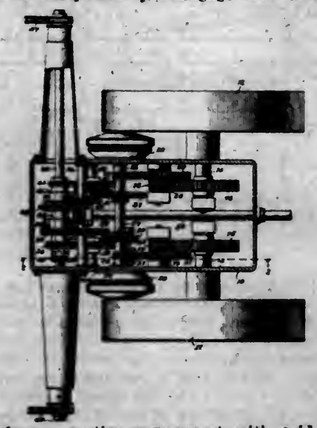
1,482,605. FOLDING MACHINE. EDWARD GUY GOBEN New Orleans, La., assignor to The E. V. Benjamin Company, Inc., New Orleans, La., a Corporation of Louisiana. Filed Dec. 8, 1919. Serial No. 343,390. 2 Claims. (Cl. 270—76.)



1. In a folding machine the combination of a rotating receiving drum for pieces of material, a rotating discharging drum with its periphery adjacent to the periphery of the receiving drum, stationary receiving gripping fingers extending from the periphery of the receiving drum, automatically operated grippers on the receiving drum spaced a predetermined circumferential distance from the receiving gripping fingers, a presser plate fastened to the discharging drum in an opening extending through the rim thereof and an automatically operated pinching bar having fingers and recesses between its fingers located within said opening coacting with said presser plate and said receiving gripping fingers, the rotations of the drums timed so that the receiving, gripping fingers of the receiving drum will deliver the pieces of material in a folded position between said bar and presser plate, the receiving fingers locating themselves in the recesses of the pinching bar when the latter is closed with said presser plate and a landing block adjacent to the discharging drum.

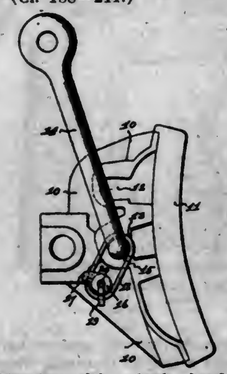
1,482,606. DRAFTING INSTRUMENT. ALBERT R. GOLDRICK, Cleveland, Ohio, assignor to The Dodd Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 22, 1921. Serial No. 509,581. 9 Claims. (Cl. 33—79.)

1. In a device of the character described, the combination of a drawing board, sheaves disposed adjacent the corners thereof, an endless taut cord running on the sheaves with parallel stretches on opposite sides of the board and adapted to move in a common direction, a grooved ruler blade having the ends thereof secured to said stretches, a pressed metal slide head having depending portions affording detachable engagement with said grooved ruler blade in said groove, a second grooved ruler blade secured to said head having a similarly formed slide head engaged in the groove thereof and a third ruler blade connected to said second slide head.



1,482,607. AGITATION SEPARATOR. ALEXANDER M. GOW, Duluth, Minn.; American Exchange National Bank of Duluth executor of said Alexander M. Gow, deceased. Filed Nov. 17, 1920. Serial No. 424,777. 7 Claims. (Cl. 83—71.)

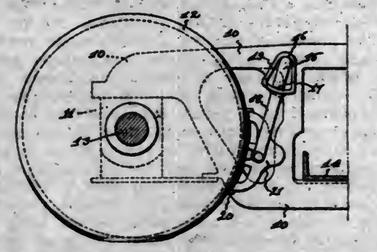
1. Separation apparatus comprising a plate, means located adjacent one face of the plate adapted to produce a magnetic field, and means adapted to fluctuate the strength of the field, the variation in strength serving to vibrate the plate and a conveyer adapted to move in contact with the plate, the conveyer being adapted to carry the material to be separated.



1,482,608. TRANSMISSION MECHANISM. CLARENCE M. HAMSHAW, Santa Clara, Calif. Filed Sept. 20, 1920. Serial No. 411,515. Renewed June 25, 1923. 2 Claims. (Cl. 180—17.)

2. A transmission mechanism comprising a casing; two independent driven shafts rotatably mounted in axial alignment within said casing; a system of change speed gears operatively disposed within said casing adapted to actuate said driven shafts; a train of reduction gears interposed between said system of change speed gears and each of said driven shafts; clutch mechanism interposed between said system of change speed gears and each of said trains of reduction gears adapted to independently disengage each of said driven

shafts from operative engagement with said system of change speed gears; a jack shaft rotatably mounted in said casing; a hollow sleeve shaft mounted for independent rotation on said jack shaft; means to selectively engage and disengage said hollow sleeve shaft with and from said jack shaft; gears on said hollow sleeve shaft adapted to mesh with and actuate said system of change speed gears; and propelling means for said hollow sleeve shaft.



1,482,609. BRAKE HEAD. BRODERICK HASKELL, Franklin, Pa. Filed May 2, 1922. Serial No. 557,881. 11 Claims. (Cl. 188—211.)

5. The combination with a brake head provided with a transverse hanger receiving recess, a lug having a lip and fixed on said brake head, a U-shaped hanger having its lower connecting member insertible in said recess, a retaining member for said hanger interposed between said hanger and a side of said brake head and removably connected by said lip to the lug on said brake head.

1,482,610. BRAKE SUPPORT. BRODERICK HASKELL, Franklin, Pa. Filed Oct. 24, 1922. Serial No. 596,592. 5 Claims. (Cl. 188—209.)

3. A car truck comprising side frames having inner walls and a lug of elongated cross-section extending from the inner side of each of said side frames, an oscillating brake hanger having an upper end with an elongated opening and adjacent to the inner wall of each of said side frames and supported from said lug

by said elongated opening, and a brake hanger having its ends connected to the other or free ends of said oscillating brake hangers.

1,482,611. THIN, MOUNTED, SENSITIZED EMULSION. ROBERT JOHN, New York, N. Y., assignor to Daylight Film Corporation, a Corporation of New York. Filed July 25, 1919. Serial No. 313,239. 4 Claims. (Cl. 95—8.)

1. A carrier having a sensitized emulsion thereon which is so thin that when exposed to light of greatly varying photographic intensity, the portions of emulsion affected by the deepest light penetration will not lie so far from the portions affected by the shallowest light penetration, as to cause perceptible contrasting effects between said portions.

1,482,612. POTASSIUM-BICHROMATE PROCESS OF PHOTOGRAPHIC REPRODUCTION. ROBERT JOHN, New York, N. Y., assignor to Daylight Film Corporation, a Corporation of New York. Filed Oct. 2, 1919. Serial No. 327,889. 7 Claims. (Cl. 95—5.4.)

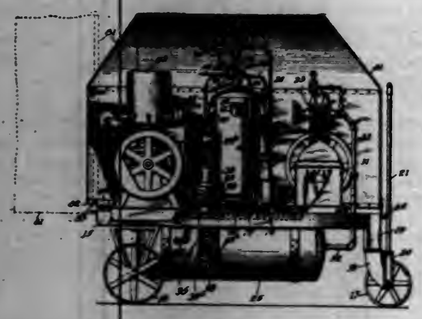
1. The process of forming a photographic record of lights and shades capable of use as a transfer printing plate, which comprises developing an exposed photographic emulsion with a non-emulsion hardening solution and then treating portions of emulsion adjacent the light affected sensitive content of the emulsion with an agent adapted to harden said emulsion by reaction with the light affected sensitive content of the emulsion, and with a neutralizing agent for said hardening agent, the relative proportions of said hardening and neutralizing agents being such as to control selectively the effective area of influence of the hardening agent but to an extent less than the complete neutralization of said hardening agent.

1,482,613. POTASSIUM IODIDE COMPOSITION OF MATTER FOR PHOTOGRAPHIC PROCESSES. ROBERT JOHN, New York, N. Y., assignor to Daylight Film Corporation, a Corporation of New York. Filed Oct. 2, 1919. Serial No. 327,891. 7 Claims. (Cl. 95—88.)

1. A developing and hardening composition containing a hardening substance and an agent adapted partially to neutralize said hardening substance comprising potassium iodid, in such an effective amount as to permit only a selective area of hardening.

1,482,614. COMPOSITION OF MATTER FOR PHOTOGRAPHIC PROCESSES. ROBERT JOHN, New York, N. Y., assignor to Daylight Film Corporation, a Corporation of New York. Original application filed May 6, 1916, Serial No. 95,957. Divided and this application filed July 25, 1919. Serial No. 313,238. 10 Claims. (Cl. 95—88.)

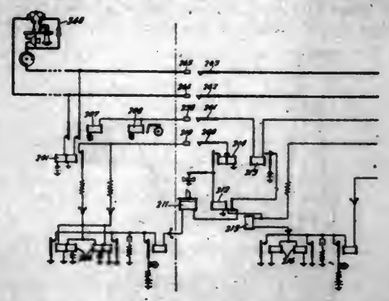
1. A developing and hardening composition of matter containing an emulsion hardening and silver salt developing substance and a substance partially but not entirely neutralizing the emulsion hardening effect of said developing and hardening substance in such amount as to permit only a selective area of hardening.



1,482,615. PROCESS OF PHOTOGRAPHIC REPRODUCTION DIRECTLY FROM A NEGATIVE. ROBERT JOHN, New York, N. Y., assignor to Daylight Film Corporation, a Corporation of New York. Filed Oct. 2, 1919. Serial No. 327,890. 6 Claims. (Cl. 95—5.4.)

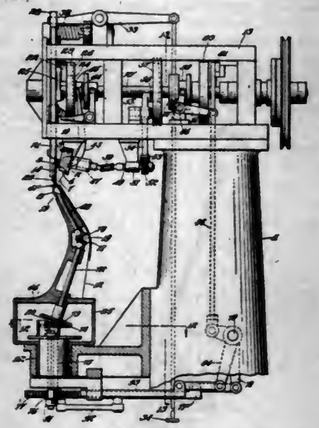
1. The process of forming a photographic record of lights and shades capable of use as a transfer printing plate, which comprises developing an exposed photographic emulsion with a non-emulsion-hardening solution, exposing it to an actinic light, and then hardening portions of emulsion adjacent the light affected sensitive content of the emulsion with an agent adapted to harden said emulsion by reaction with the light affected sensitive content of the emulsion, and with a neutralizing agent for said hardening agent, the relative proportions of said hardening and neutralizing agents being such as to control selectively the effective area of influence of the hardening agent but to an extent less than the complete neutralization of said hardening agent.

1,482,616. DOUBLE PROCESS OF PHOTOGRAPHIC REPRODUCTION. ROBERT JOHN, New York, N. Y., assignor to Daylight Film Corporation, a Corporation of New York. Filed Nov. 10, 1919. Serial No. 336,896. 11 Claims. (Cl. 95—5.4.)



1. The process of forming a photographic record of lights and shades capable of use as a transfer printing plate, which comprises devloping an exposed photographic emulsion with a non-emulsion-hardening solution, fixing the undeveloped light sensitive content, converting the developed image so that it again becomes light sensitive, exposing it to an actinic light, and then hardening portions of emulsion adjacent the light affected sensitive content of the emulsion with an agent adapted to harden said emulsion by reaction with the light affected sensitive content of the emulsion, and with a neutralizing agent for said hardening agent, the relative proportions of said hardening and neutralizing agents being such as to control selectively the effective area of influence of the hardening agent but to an extent less than the complete neutralization of said hardening agent.

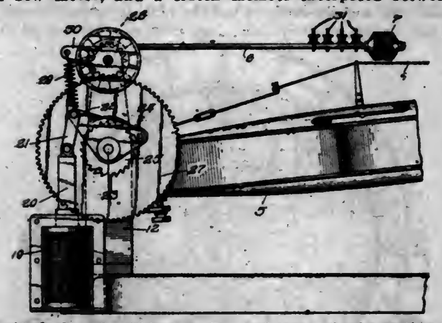
1,482,617. PNEUMATIC COATING APPARATUS. JENS A. PAASCHE, Chicago, Ill. Filed Nov. 27, 1918. Serial No. 264,298. 21 Claims. (Cl. 91—45.)



1. A portable pneumatic painting apparatus comprising a wheeled truck, a driving motor and an air compressor mounted respectively on opposite ends of said truck and having a driving connection, an upright paint tank mounted on the truck between said motor and said compressor, a horizontally positioned air compression tank mounted on the truck in a plane beneath said motor, compressor, and paint tank, conduits connecting said air compression tank to said compressor and to said paint tank, and a pneumatic paint brush having suitable connections with said paint tank and with the compressed air supply.

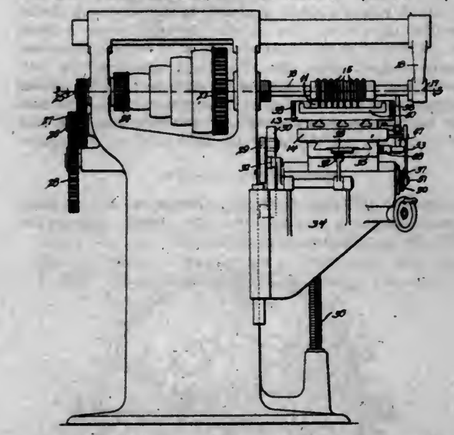
1,482,618. TELEPHONE-EXCHANGE SYSTEM. LEPA POLINKOWSKY, New York, N. Y., and WILLIAM H. MATTHIES, Hackensack, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 14, 1919. Serial No. 304,212. 27 Claims. (Cl. 179—18.)

22. In a telephone system, an automatic switch for establishing telephone connections, a set of registers, a second set of registers, means for setting said first registers, means operated under the control of said first registers in accordance with the setting thereof for controlling said automatic switch, and means under the control of said first registers for setting said second registers in correspondence with the setting of said first registers.



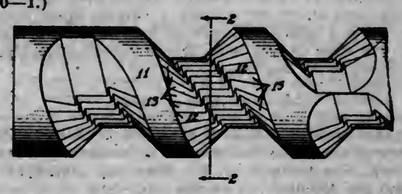
1,482,619. SHOE-SEWING MACHINE. JAMES H. REED, Swampscott, Mass., assignor to A. E. Little Company, Lynn, Mass., a Corporation of Massachusetts. Filed Jan. 22, 1921. Serial No. 439,255. 9 Claims. (Cl. 112—36.)

1. A lock stitch shoe sewing machine having a straight barbed needle and a shuttle to supply the shuttle thread located on one side of the work, and on the other side thereof a horn pierced at its end for the passage of the needle, and a thread-feeding looper to lay the cop thread in the barb of the needle, said horn being revoluble and said looper being mounted to oscillate therein.



1,482,620. BOWING MECHANISM FOR SELF-PLAYING STRINGED INSTRUMENTS. HENRY K. SANDELL, Evanston, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 9, 1922. Serial No. 580,665. 3 Claims. (Cl. 84—11.)

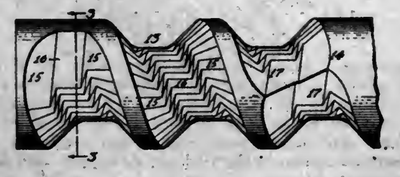
1. In self-playing stringed instruments, sounder members for the strings, means for imparting movement to said sounder members, said means including a rotatable shaft, a bow motor, and a clutch member interposed between



said shaft and said bow motor, and means for imparting to said shaft accelerated movement independently of said bow motor.

1,482,621. SCREW AND GEAR MAKING MACHINE. HENRY J. SCHMICK, Williamsport, Pa. Filed Dec. 31, 1921. Serial No. 526,327. 21 Claims. (Cl. 90—4.)

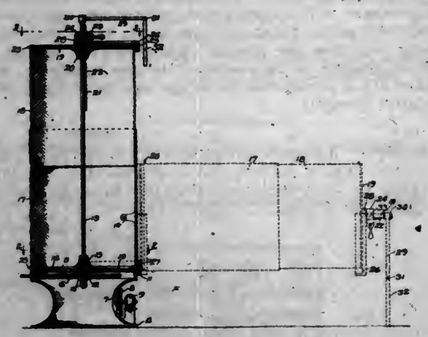
1. A machine for forming circumferential grooves comprising a cutter support and cutter carried thereby, a table support adjustable vertically and laterally beneath said cutter, a table slidable lengthwise on said table support and means for reciprocating said table, a work support mounted on said table and having means for clamping the work, said clamping means being adjustable lengthwise of said work support, and means for rotating said clamping means in synchronism with its lengthwise movement for feeding the work to the cutter.



1,482,622. GEARING AND METHOD OF MAKING THE SAME. HENRY J. SCHMICK, Williamsport, Pa. Filed Jan. 20, 1922. Serial No. 530,631. 16 Claims. (Cl. 90—1.)

1. A twisted gear tooth having its side walls making a constant angle from top to bottom with reference to the axis of the gear other than the angle of lead.

5. The method of producing twisted gears by successive cuts transverse to the axis comprising rolling the blank between cuts to displace it bodily in a direction at an angle to the direction of the cut.

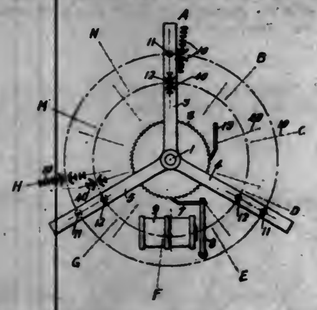


1,482,623. MECHANICAL ELEMENT AND METHOD OF MAKING THE SAME. HENRY J. SCHMICK, Williamsport, Pa. Filed Mar. 11, 1922. Serial No. 542,955. 13 Claims. (Cl. 90—1.)

1. The process of generating mechanical elements having a peripheral groove formed by a series of cuts extending around the axis to one hand, each cut making an angle to the other hand with the axis, which comprises alternately rolling the blank and shifting it endwise between successive cuts in the direction of lead.

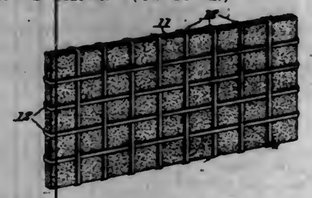
5. A mechanical element comprising a groove extending to one hand consisting of a series of cuts transverse to the axis and inclining to the opposite hand from the direction of said groove.

1,482,624. DRYING MACHINE. PASCAL J. SHAMPAY, Chicago, Ill. Filed Oct. 21, 1922. Serial No. 595,952. 16 Claims. (Cl. 34—17.)



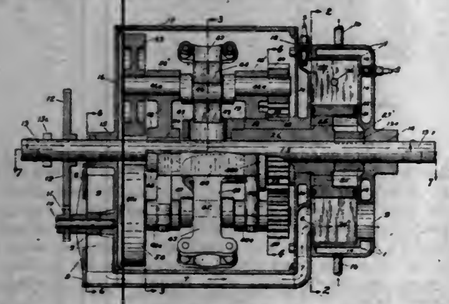
6. A drier comprising a base having an air passage therethrough; a spider attached to the base and disposed across said air passage; a shaft journaled in said spider; two telescoping tubes disposed around said shaft; a spider fixed on said shaft and attached to one end of one of said tubes; a disc splined on said shaft and attached to an end of the other tube; and means for adjusting the last-mentioned tube on the shaft with respect to the first-mentioned tube.

1,482,625. DISTRIBUTING SWITCH. GEORGE THOMPSON, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 4, 1919. Serial No. 321,651. 3 Claims. (Cl. 179—27.5.)



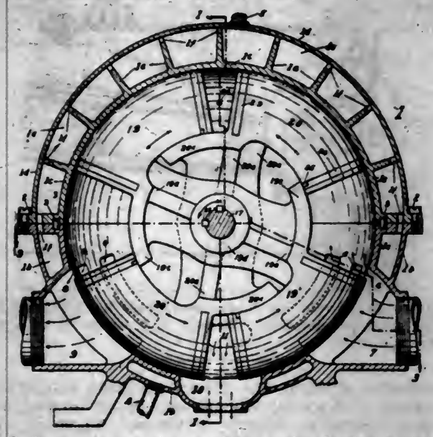
3. In an automatic switch, a plurality of main circuit closers, a plurality of auxiliary circuit closers, means to alternately operate said main circuit closers, and said auxiliary closers, said means including a plurality of

operating members in fixed relation to one another, certain ones of said operating members being arranged to



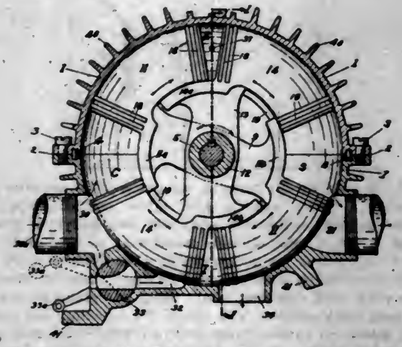
operate said main circuit closers and others of said operating members being arranged to operate said auxiliary circuit closers.

1,482,626. DESICCATING APPARATUS. JASPER WHITING, Boston, Mass. Filed Sept. 14, 1922. Serial No. 588,293. 2 Claims. (Cl. 34—1.)



1. A desiccating unit comprising a porous body and a hygroscopic salt disseminated throughout the porous body and partly filling the pore space, the arrangement being such that the amount of salt and the amount of water adapted to be contained in the remaining pore space are in equilibrium in an atmosphere of about 60% relative humidity.

1,482,627. ROTARY INTERNAL-COMBUSTION ENGINE. FRANK A. BULLINGTON, Kansas City, Mo. Filed June 17, 1918, Serial No. 240,443. Renewed Apr. 30, 1923. 17 Claims. (Cl. 123—11.)

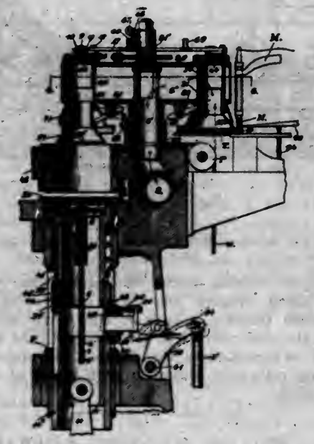


1. In a rotary combustion engine, a cylinder casing, a main shaft therein, pistons therein secured to said main shaft, pistons therein provided with a sleeve upon said shaft, and operating connections between said shaft and said sleeve comprising a lever connected with said shaft, a lever connected with said sleeve, a crank shaft carried by the former lever and operatively connected with the latter lever by means of a sliding member, a crank shaft gear and a fixed gear operatively connected, whereby to cause relative rotative movements of said sleeve and said shaft.

1,482,628. ROTARY ENGINE. FRANK A. BULLINGTON, Portland, Oreg. Filed Feb. 24, 1919. Serial No. 278,880. 2 Claims. (Cl. 123—11.)

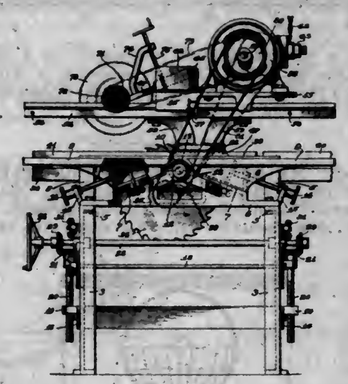
2. In a rotary engine, a piston casing having a piston chamber therein of semi-circular form in cross section, and reinforced on its outer surface with radially disposed, crescent-shaped ribs, the ribs being progressively narrower from the center toward the ends so that the widest portion is in the middle, and an outer shell over said ribs to form a cooling chamber between the ribs, the piston casing and the outer shell.

1,482,629. ROTARY ENGINE. FRANK A. BULLINGTON, Portland, Oreg. Filed Oct. 20, 1919. Serial No. 332,858. 4 Claims. (Cl. 123—11.)



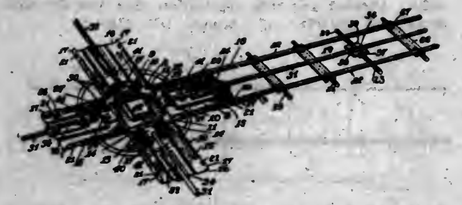
2. In a rotary engine, a piston casing having a main inlet and an auxiliary inlet at a space apart, valve controlled means for connecting said auxiliary inlet with said main inlet or with the atmosphere at will, pistons mounted to rotate in said casing, one after the other, and adapted to form chambers therebetween within said casing, and means for causing a varying speed of rotation of said pistons relative to each other, whereby to vary the sizes of said chambers for functioning purposes, substantially as described.

1,482,630. MACHINE FOR MAKING POWDER PUFFS. ALDO CURIONI, New York, N. Y., assignor to Maurice Levy, New Rochelle, N. Y. Filed Apr. 20, 1921. Serial No. 463,018. 12 Claims. (Cl. 112—2.)



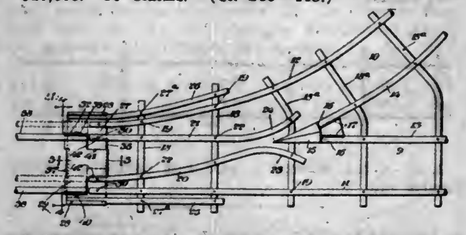
1. In a machine for sewing powder puffs, the combination with a sewing mechanism adapted to produce a chain stitch, of revoluble means adapted to hold two

superposed discs of fabric adjacent the presser foot and feeding mechanism of the said sewing machine whereby the actuation of said sewing machine causes said discs to be revolved together with said revoluble means and to



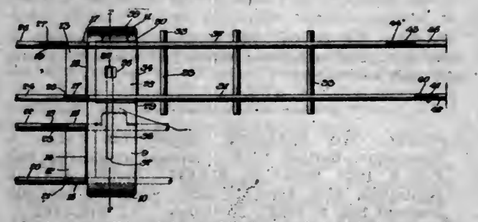
be stitched together along a circular line, the said revoluble means being movable to carry the discs towards and away from said needle after the stitching has been completed, to draw out the thread.

1,482,631. WOODWORKING MACHINE. LOUIS DE LINIERES, Detroit, Mich., assignor, by mesne assignments, to The Woodworker Manufacturing Co. Inc., Detroit, Mich., a Corporation of Michigan. Filed Nov. 8, 1920. Serial No. 422,631. 7 Claims. (Cl. 144—3.)



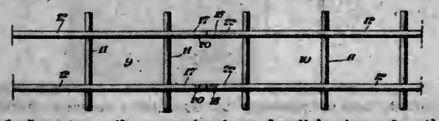
1. A wood-working machine comprising an adjustable saw table, an adjustable planer table, a saw for said saw table, a cutter for said planer table, shafts supporting said saw and cutter, pulleys on said shafts and in a common vertical plane, a third tool shaft mounted independently of said saw and cutter shafts and having a pulley thereon, a power transmission member adapted to be engaged around and to impart movement to either or both pulleys upon said saw and cutter shafts and also adapted to be interchangeably engaged around the pulley on said third tool shaft and means for maintaining the proper tension of said transmission member in any of the three arrangements.

1,482,632. TOY RAILWAY CROSSOVER. ALAN R. FERGUSSON, Buffalo, N. Y. Filed Feb. 3, 1923. Serial No. 616,647. 32 Claims. (Cl. 246—465.)



1. A toy cross-over for a toy railway comprising a piece of sheet metal bent or stamped up to form a pair of traction rail portions extending in alinement and spaced in accordance with the gage of the railway.

1,482,633. TOY RAILWAY SWITCH. ALAN R. FERGUSSON, Buffalo, N. Y. Filed Feb. 8, 1923. Serial No. 617,688. 36 Claims. (Cl. 246—445.)



3. The combination in a toy railway of a pair of sections adapted to be held end to end, one thereof having switching rails, said sections having a guiding connection therebetween and including means for shifting one of said sections relatively to the other.

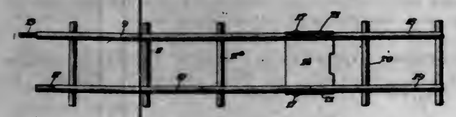
1,482,634. TOY SWITCH. ALAN R. FERGUSSON, Buffalo, N. Y. Filed Mar. 19, 1923. Serial No. 625,990. 40 Claims. (Cl. 246—445)

3. A reversible right and left handed switch comprising switch means having two pairs of companion rails, one pair of companion rails located entirely at one side of the other pair, and switch means adapted to be connected to a pair of companion rails, one of said switch means being shiftable relatively to the other to bring a pair of rails of one switch means into alignment with a pair of rails of the other switch means.

1,482,635. TOY RAILWAY. ALAN R. FERGUSSON, Buffalo, N. Y. Original application filed July 22, 1922, Serial No. 576,656. Patent No. 1,457,771, dated June 5, 1923. Divided and this application filed Apr. 5, 1923. Serial No. 629,960. 21 Claims. (Cl. 238—132.)

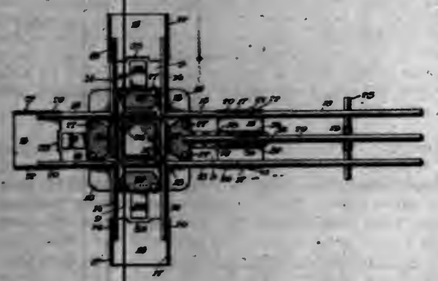
1. In a toy railway a wire formed rail having a lengthwise extending concaved face.

1,482,636. TOY RAILWAY. ALAN R. FERGUSSON, Buffalo, N. Y. Original application filed July 22, 1922, Serial No. 576,656. Patent No. 1,457,771, dated June 5, 1923. Divided and this application filed Apr. 5, 1923. Serial No. 629,961. 17 Claims. (Cl. 238—10.)



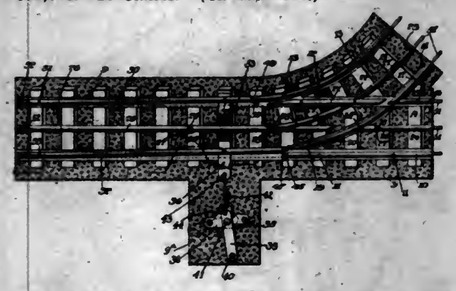
3. In a toy railway, the combination of a pair of wire formed rails located end to end, said rails having cooperating overlapping portions forming a tension joint.

1,482,637. TOY RAILWAY. ALAN R. FERGUSSON, Buffalo, N. Y. Filed Apr. 17, 1923. Serial No. 632,600. 34 Claims. (Cl. 238—10.)



1. In a toy railway a wire rail having a resilient tubular end.

1,482,638. TOY RAILWAY. ALAN R. FERGUSSON, Buffalo, N. Y. Filed Apr. 17, 1923. Serial No. 632,601. 26 Claims. (Cl. 238—10.)



3. In a toy railway the combination of a pair of wire rails, and detachable means for releasably joining said rails end to end.

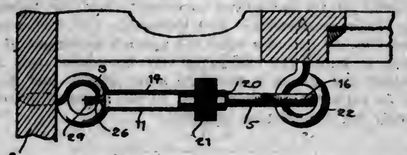
1,482,639. TOY RAILWAY CROSSOVER. ALAN R. FERGUSSON, Buffalo, N. Y. Original application filed Feb. 3, 1923, Serial No. 616,647. Divided and this application filed Apr. 17, 1923, Serial No. 632,602. Renewed Dec. 5, 1923. 27 Claims. (Cl. 246—462.)

5. In a toy railway, the combination of a supporting member, and a plurality of wire rails secured thereto and forming oppositely located frog points, said member having bent up tail portions.

1,482,640. SWITCH MECHANISM FOR TOY RAILWAYS. ALAN R. FERGUSSON and CONSTANCE T. FERGUSSON, Buffalo, N. Y. Filed Apr. 17, 1923. Serial No. 632,610. 20 Claims. (Cl. 246—412.)

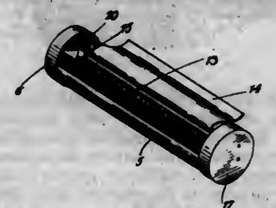
1. In a toy railway switch the combination of a composition board support, two pairs of converging wire rails secured thereto, a pair of wire rails secured adjacent to the ends thereof to said support, and means including a swinging lever for shifting the opposite ends of said last rails into alinement with either of said first pairs of rails.

1,482,641. TOY OR MINIATURE RAILWAY. CONSTANCE T. FERGUSSON and ALAN R. FERGUSSON, Buffalo, N. Y. Filed June 6, 1922. Serial No. 566,375. 28 Claims. (Cl. 238—6.)



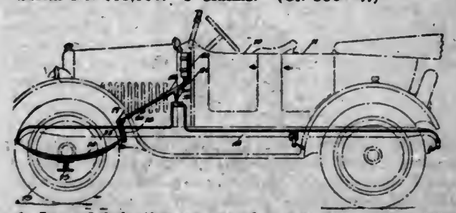
1. In a toy railway, the combination of a pair of knockdown continuous platform supports, a wire rail connected to each support, and means for releasably holding said rails end to end.

1,482,642. MEANS FOR PREVENTING SELF-IGNITION OF AIRSHIPS AND THE LIKE. GOTTLIEB DINKELA, Charlottenburg, near Berlin, Germany. Filed Jan. 5, 1922. Serial No. 527,167. 1 Claim. (Cl. 244—3.)



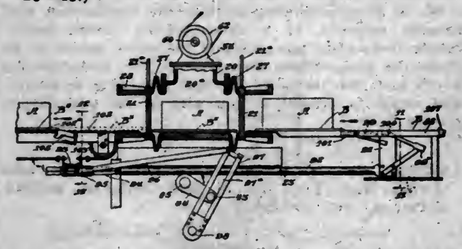
In means for preventing self-ignition of airships the combination of an electrically conducting net-work arranged in the lower part of the gas-containers and adapted to accumulate the electricity transmitted by the water drops formed by the condensation of the moisture of the filling medium of the airship, a system of points arranged on the external surfaces of the envelope and adapted to radiate the electricity into the space and means adapted to electrically connect the said net-work in the gas containers with the said system of points.

1,482,643. DOOR HOOK. HARRY C. ETHERIDGE, Waco, Tex. Filed Sept. 5, 1922. Serial No. 586,364. 3 Claims. (Cl. 292—96.)



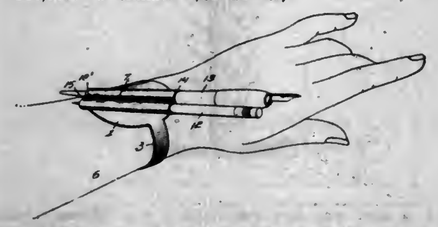
1. A device of the class described comprising a housing provided at one end portion with attaching means, the opposite end being provided with an opening and the opposed walls of the housing adjacent to said opening being provided with cut out portions, a nut extending through the housing and said cut out portions, a hook member disposed within the housing through the opening in an end thereof and upon which the nut is threaded, rotation of the nut extending or retracting the hook member with respect to the housing, and means carried by the inserted end portion of the hook member for limiting the outward movement of the hook.

1,482,644. CIGARETTE-ROLLING APPARATUS. PETER J. GALLAGHER, Jersey City, N. J. Filed Jan. 4, 1922. Serial No. 526,947. 1 Claim. (Cl. 13—5.)



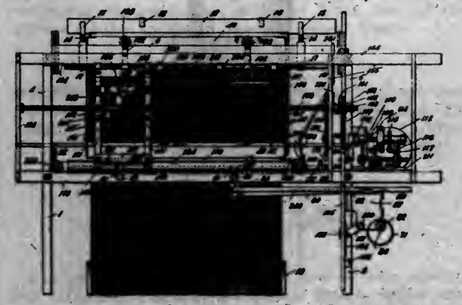
A cigarette former comprising an elongated receiver closed at one end, a support and a trough-shaped tobacco receiving member mounted thereon within the receiver, said member being also secured to the closed end of the receiver, a rotatable cap mounted on the opposite end of the receiver, a pair of resilient cigarette paper gripping strips pivotally mounted and attached to the rotatable cap whereby upon the rotation of the same in the tobacco receiving member, the tobacco will be rolled and confined in the cigarette paper.

1,482,645. LUBRICATING SYSTEM. PALEMON HILSMAN GASKINS, Jacksonville, Fla. Filed Nov. 24, 1922. Serial No. 603,050. 5 Claims. (Cl. 184—7.)



1. In a lubricating system for use with automobiles having a spring mounted for flexure, a reservoir for the lubricant positioned above the points to be lubricated, a valve casing communicating with the reservoir, a discharge head communicating with the valve casing, and conveying devices leading from the discharge head to the points to be lubricated, a spring seated ball valve mounted in the valve casing and controlling the flow of lubricant, and means for opening said ball valve including a steel wire connected at one end to the spring and engageable at its opposite end with the ball valve, and an elongated tubular casing enclosing the steel wire and supported upon the valve casing.

1,482,646. MACHINE FOR MAKING TERRA-COTTA BLOCKS. MAJOR E. GATES, Terra Cotta, Ill. Filed July 6, 1920. Serial No. 394,177. 17 Claims. (Cl. 25—45.)

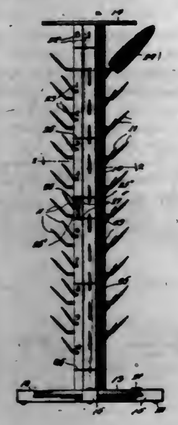


5. A machine for pressing plastic material into molds comprising a chamber having openings at opposite sides thereof, doors movable to close said openings, a valve for admitting a combustible mixture to said chamber, means for igniting said mixture after said doors and valve are closed, means for inserting molds into the chamber thru one of said openings and means for withdrawing molds from the chamber thru the other openings.

1,482,647. PENCIL HOLDER. ALLISON D. GISH, Coffeyville, Kans. Filed Aug. 8, 1922. Serial No. 580,555. 3 Claims. (Cl. 24—3.)

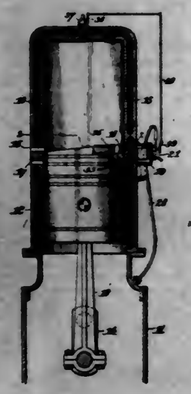
1. A holder for the purpose set forth comprising a flexible body having formed integral therewith a pair of oppositely extending flexible attaching elements, and a holding element formed of flexible material secured to and extending across the upper face of said body and providing lengthwise extending pockets disposed diagonally with respect to the upper face of said body, the width of said holding element being less than the width of said body and the length of said holding element being such as to extend entirely across said body.

1,482,648. TEXTILE MACHINE. EDGAR F. HATHAWAY and CHARLES IÆA, Dorchester, Mass., assignors, by mesne assignments, to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Apr. 24, 1914, Serial No. 834,238. Renewed Mar. 17, 1922. Serial No. 544,954. 96 Claims. (Cl. 8—44.)



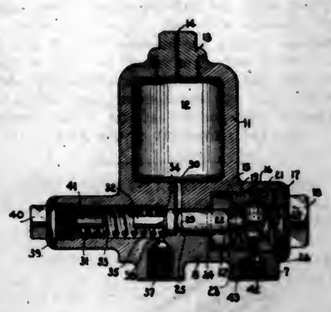
1. In a harness designating machine, the combination with supports for a plurality of harnesses, means for giving said supports each a combined lifting and sub-

stantial endwise movement, pattern controlled means for selectively actuating said moving means, a needle, and means for causing relative movement between the needle and the harnesses transverse the harness support.



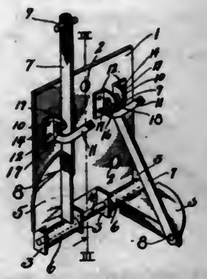
66. In a warp drawing machine the combination with harness supports, of a thread-placing device, power-driven mechanism for actuating the same, means to initiate the power-driven movement of the thread-placing device and stop the same for each threading movement and means to present a drop wire to the said thread-placing device.

1,482,649. SEED-CORN RACK. ESTHER HAYDEN, East Jordan, Mich. Filed May 18, 1922. Serial No. 561,944. 3 Claims. (Cl. 34—26.)



1. A seed corn rack comprising a post having extending outwardly and upwardly therefrom a plurality of impaling points and disks rigidly and permanently secured to the opposite ends of the post having diameters greater than the diametrical extent of the impaling points.

1,482,650. INTERNAL-COMBUSTION ENGINE. JOHN IRA CECIL HEBB, Bridgewater, Nova Scotia, Canada. Filed Sept. 11, 1920. Serial No. 409,535. 1 Claim. (Cl. 123—80.)



A two-cycle internal combustion engine including a cylinder, a fuel device including a reservoir, and mechanism including a piston for creating the compression of air adjacent the reservoir to feed a charge of fuel from the device into said cylinder on the downward stroke of the piston substantially at the time the piston reaches the limit of its downward movement; and for transferring the compressed air and increasing the compression thereof in the cylinder upon the upward movement of the piston to ignite the charge of fuel introduced into said cylinder and means operable to shut off the fuel device and to release the compression in the cylinder simultaneously for the purpose specified.

1,482,651. AUTOMATIC AIR-CYLINDER PUMP OILER. AUGUST KIRCHHOFER, Nashville, Tenn. Filed Dec. 17, 1921. Serial No. 523,144. 8 Claims. (Cl. 303—10.)

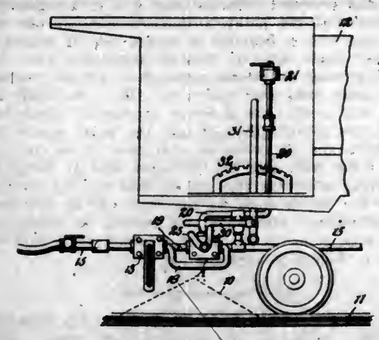
1. In a device for lubricating the compression cylinders of an air brake system of a locomotive, an oil reservoir, a measuring chamber in communication with the reservoir, means in the chamber for measuring a predetermined quantity of oil fed by gravity from the reservoir, means adapted to be operated when the air brake is applied to cause the measuring means to deliver a measured quantity of oil to the compression cylinders upon the suction stroke of the pistons in the compression cylinders, and means for connecting the last-mentioned means with the air brake cylinder pipe of the system.

1,482,652. CLOSURE LATCH. FRANK J. KLEPPER, Earling, Iowa. Filed Mar. 22, 1923. Serial No. 626,775. 3 Claims. (Cl. 292—54.)

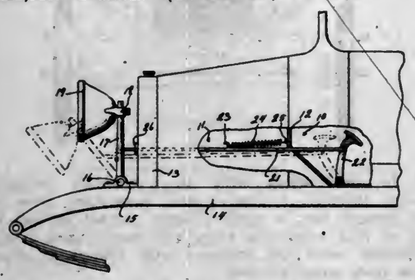
1. The combination with independently movable latch ears in spaced relation, of a supporting link for said ears engaging a cam surface at its free end, the cam surface guiding the link into a locked position.

1,482,653. GRIPPING DEVICE. WILLIAM E. LILLY, Lillybrook, W. Va. Filed Jan. 16, 1923. Serial No. 612,990. 4 Claims. (Cl. 294—20.)

1. A gripping device comprising a pole, pivoted jaws at the outer end of the pole, a helical spring surrounding the jaws at their inner ends for holding the same closed, a cross bar positioned to enter between the inner ends of the jaws and to engage the spring for compressing the same to permit opening of the jaws, and means for operating said cross bar.



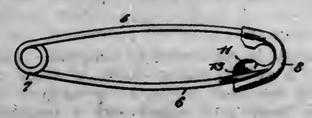
1,482,654. CIGARETTE HOLDER. PATRICK J. MCGILLICUDDY, Denver, Colo. Filed Sept. 30, 1922. Serial No. 591,605. 4 Claims. (Cl. 131—51.)



1. In combination, a tubular support, a curved lever pivoted at one end of said support, a stem slidably mounted in said support and having a curved end corresponding to that of the lever, a pivotal and slidable connection between said lever and stem, and a push button on the other end of the stem, movement of the stem causing pivotal movement of the lever.

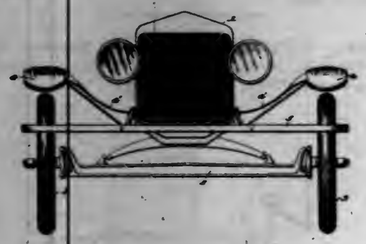
1,482,655. AUTOMATIC TRAIN-CONTROL MECHANISM. ROBERT L. MILLER, Spokane, Wash., assignor to Otis Automatic Train Control, Inc., Spokane, Wash., a Corporation of Washington. Filed June 26, 1922. Serial No. 570,960. 3 Claims. (Cl. 246—190.)

2. In automatic train control apparatus, the combination with a locomotive having a reverse bar for controlling its forward and backward movements, of fluid pressure controlled brake operating mechanism associated with said locomotive and including a pair of ramp engageable devices located one to either side thereof and independently operable at predetermined times to cause an automatic application of its brakes, said brake mechanism including an engineer's valve, a rotatable valve effective to establish communication between either of said devices and said engineer's valve and simultaneously cut off such communication with the other device, said rotatable valve being connected with an operable by said reverse bar, the connection between said rotatable valve and said reverse bar being such that in all operative positions of the latter one of said devices is in communication with and the other cut off from the engineer's valve.



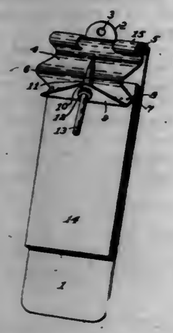
1,482,656. TILTING HEADLIGHT. WILLIAM MOORE, Michigamme, Mich. Filed Jan. 8, 1923. Serial No. 611,340. 1 Claim. (Cl. 240—61.)

In combination with a vehicle embodying a cockpit and a dash, a transversely disposed shaft arranged at the forward end of the vehicle for rotation, substantially vertical supports rigid to the shaft and adapted for the reception of headlights, an arm associated with the shaft, a reach rod connected at one end to said arm and having its rear end extending through said dash and into said cockpit, a pivoted foot lever within the cockpit and with which the rear end of the reach rod is pivotally connected, means normally urging the reach rod rearwardly comprising a spring secured at one end to the front wall of the cockpit and having its opposite end secured to a hook carried by said rod, and an adjustable stop member upon said reach rod and normally maintained in engagement with the front face of the radiator of the vehicle by the last named means.



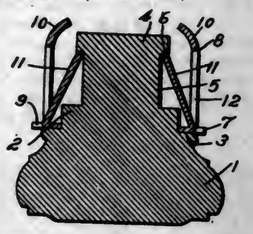
1,482,657. SAFETY PIN. GIOVANNI OCCHIPINTI and ATTILIO BIANCHI, New York, N. Y. Filed Oct. 16, 1920. Serial No. 417,290. 1 Claim. (Cl. 24—156.)

A safety pin comprising a single piece of wire bent in oval formation and provided with a branch and a connected point, the latter movable with relation to the former and having its free end formed with a perforation, the branch having its free end curved and



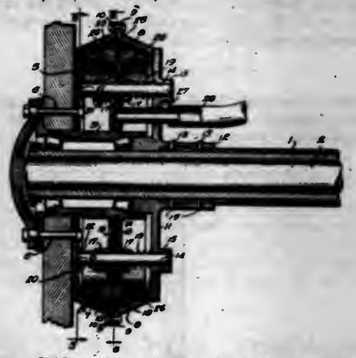
provided with a lug having flared sides terminating at the same positions at their joinder with said end, and a guard member secured to said curved part of the branch and provided with an open side to accommodate adjustments of the point, a guide located at one side of the lug, and a deflector arranged out of alignment with said guide and in vertical alignment with said lug and serving on lateral adjustment of the free end of the point into said guard to deflect the said end toward said guide, the deflector serving to operatively position the point with said lug, the guide spaced laterally from the lug whereby alignment of the perforation is made with said lug, the open side of the guard terminating below the free end of said lug, the termination of the flared sides of the said lug at the same point of joinder with said end serving to permit the eye of said point to be freely removed from said lug when it is desired to open the pin.

1,482,658. COMBINED BUMPER AND FENDER BRACE. FRANK A. OLCOTT, Columbus, Nebr. Filed Sept. 27, 1923. Serial No. 665,128. 5 Claims. (Cl. 293—55.)



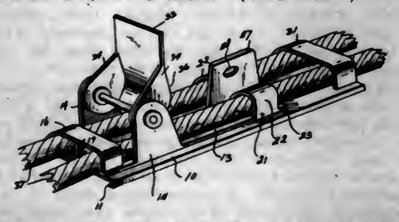
1. In combination with an automobile including fenders therefor, a bumper bar, supporting arms for said bumper bar, a separate brace carried by and for each of said supporting arms, and means fixed to said supporting arms and engaging said fenders at points below their upper surfaces.

1,482,659. TABLET HOLDER. EDITH OSWALD, Independence, Iowa. Filed June 30, 1923. Serial No. 648,746. 3 Claims. (Cl. 24—66.)



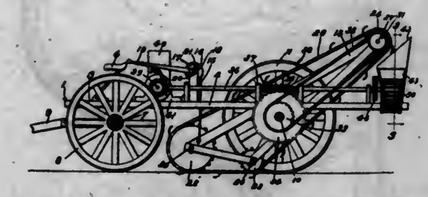
1. A device of the character described, comprising a base-plate, a clamping-plate positioned upon the upper part of the base-plate, having a top marginal scroll and having its lower part shaped with a transverse ridge abutting upon the adjacent face of the base-plate, resilient securing means clamping said scroll upon said base-plate, and means upon the lower part of said clamping-plate for receiving and holding releasably a writing implement.

1,482,660. GLASS CASTER. CHARLES G. OVERMYER, Hartford City, Ind. Filed May 23, 1921. Serial No. 471,703. 2 Claims. (Cl. 16—42.)



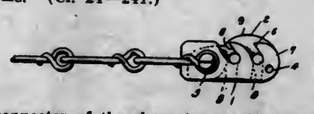
1. In a device of the class described, a caster comprising a body and a neck, a retainer including a base supported on said body and having a tubular extension receiving said neck, the extension being slotted to form arms, one arm being engaged with the neck and another being resilient to hold the retainer and the caster in an article of furniture.

1,482,661. FLUID-PRESSURE BRAKE. HORACE F. SCRUBY, Miami, Okla., and CHARLES B. ROGERS, Joplin, Mo. Filed Jan. 18, 1923. Serial No. 613,498. 4 Claims. (Cl. 188—151.)



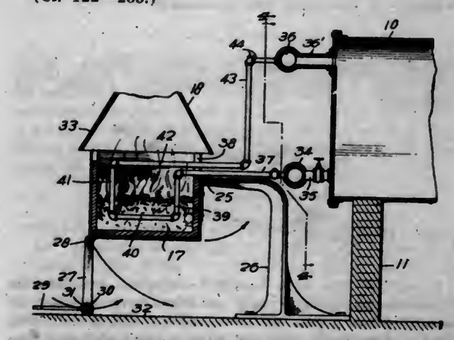
1. In a fluid pressure brake, a brake drum adapted to be secured to a revolving member, a supporting plate arranged adjacent said drum and secured to a stationary member, a plurality of pins carried by said plate and projecting into said drum, laterally movable disks mounted on said pins, flexible members secured to said disks to form a chamber between them, means for admitting fluid to said chamber, and friction surfaces carried by said disks and adapted to engage said brake drum when said disks are moved away from each other.

1,482,662. MAIL-BAG FASTENER. TRAFORD C. SHEPPARD, South Richmond, Va. Filed May 2, 1923. Serial No. 636,245. 8 Claims. (Cl. 24—30.5.)



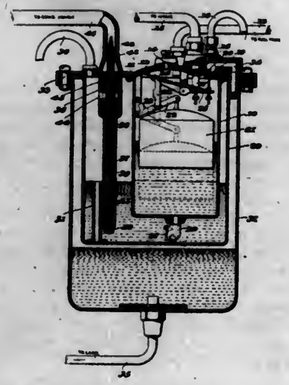
1. In a mail bag fastener, a base plate, a hasp plate mounted upon the upper surface of the base plate, a guide mounted upon one end of the hasp plate and secured to the base plate through the hasp plate, a hasp pivoted to the hasp plate, a staple mounted upon the opposite end of the hasp plate, and means for securing the staple to the base plate extending through the hasp plate.

1,482,663. STONE GATHERER. FREDERIC A. SHOULDICE, Trucksville, Pa. Filed Jan. 12, 1922. Serial No. 528,736. 1 Claim. (Cl. 55—17.)



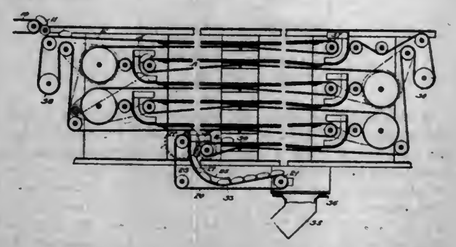
In a device of the class described, a wheel mounted frame, a worm wheel and a sprocket wheel mounted to rotate together on the frame intermediate the ends thereof, a shaft extended longitudinally of the frame and located exteriorly of the frame, an engine on the frame, means for connecting the engine operatively with the shaft, the engine being located at the forward end of the frame, a worm on the shaft, intermediate the ends thereof and meshing with the worm wheel, a stone gatherer within the frame and driven by the sprocket wheel, the gatherer operating parallel to the shaft, and a conveyor receiving stones from the gatherer and located at the rear of the frame, the conveyor operating transversely of the shaft, and means for operatively connecting the conveyor with the rear end of the shaft.

1,482,664. CHAIN CONNECTER. JOHN H. SMITH, Denton, Nebr. Filed Oct. 11, 1922. Serial No. 593,740. 2 Claims. (Cl. 24—241.)



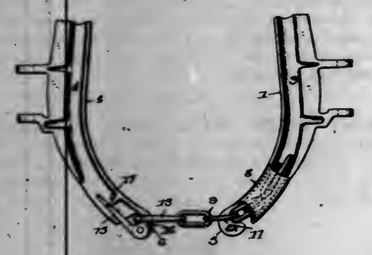
1. A connecter of the character specified comprising a hook member, said hook member consisting of an elongated strip formed into substantially U-shape, a lock member coacting with and pivoted to the hook member in the bifurcation thereof, said hook member and lock member having interengaging projections and recesses at their contacting surfaces, the lock member being resilient, and the construction of the lock member providing a space for insertion of a tool to pry the projections from the notches.

1,482,665. GENERATOR. HENRY STRONG, Millinocket, Me. Filed Apr. 30, 1921. Serial No. 465,806. 4 Claims. (Cl. 122—235.)



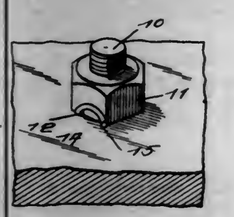
2. A heating plant comprising an upright having a substantially horizontal offset, a fire-box hinged at one side of the extremity to the offset and capable of swinging upon said hinge to dump the contents, the rearward side of said box being lower than other upper limits, a strut pivoted to the under side of the fire-box, proportioned to engage the floor and retain the fire-box in operating position, a roller carried by the strut, a lever pivoted to the strut and extending to a remote point for actuating the strut to dump the fire-box, a plurality of coils extending downwardly within the box and having their connections introduced over the said lower side and a boiler connected with the coils.

1,482,666. HYDROCARBON MOTOR. MILTON TIBBETTS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 16, 1920. Serial No. 358,927. 14 Claims. (Cl. 158—36.)



1. A fuel feeding device comprising a float chamber and means for supplying liquid fuel thereto, a chamber connected to the outlet of said float chamber and having a continuously open overflow outlet, and a feed chamber connected to receive the overflow from the second chamber and having a feed outlet at the bottom.

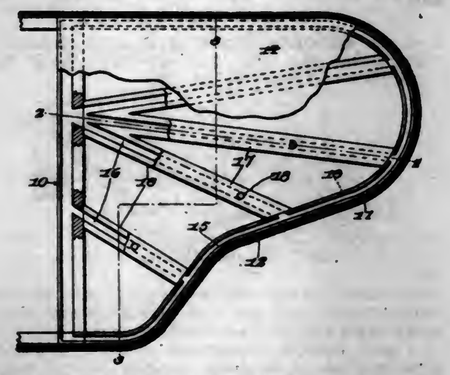
1,482,667. SPACING RECTIFIER. FRANK H. VAN HOUTEN, Beacon, N. Y., assignor to Dutchess Tool Company, Beacon, N. Y., a Corporation of New York. Filed Nov. 15, 1922. Serial No. 601,099. 14 Claims. (Cl. 198—34.)



14. In a spacing rectifier, a plurality of rollers, a driving roller, and endless belt over said rollers, and an outwardly concave guide located between two of said rollers to indent said belt between said rollers, a conveying reach moving at a higher rate of speed than said belt and discharging articles by gravity to the indented portion of said belt, said belt having a discharge portion inclined upwardly from the bottom of said indented portion to the point of discharge, the space between said reach and said belt being such that the articles may slide down said indented portion into contact with one another at the bottom of said portion so as to be discharged at regular intervals from said belt.

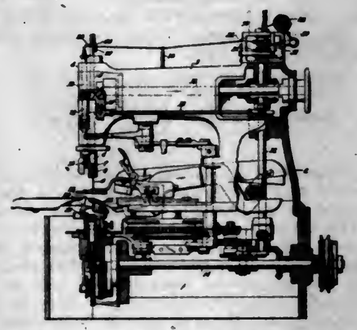
1,482,668. HAME. JAMES M. WALSH, Milwaukee, Wis., assignor to Walsh Harness Company, Wilmington, Del., a Corporation of Delaware. Filed June 10, 1920. Serial No. 387,932. 6 Claims. (Cl. 54—27.)

2. The combination of hames one of which is provided at its lower end with a downwardly directed hook and formed adjacent the hook with a longitudinal channel open on the under side and a stop within the channel, a lever pivoted to the hame hook and having an upwardly directed hook approximately coinciding with the hame hook when the lever is turned upwardly into said channel against the stop therein, the free end of the lever when closed extending beyond the stop and held thereby away from the inner wall of the channel, and a chain releasably engageable at one end with said hooks and adjustably connected with the lower end of the other hame, the pull of the chain on the lever hook when the hames are drawn together by the chain securely holding the lever against the stop with the free end of the lever completely within and protected by the sides of the channel.



1,482,669. NUT LOCK. JOHN C. WHITED, Creede, Colo. Filed July 9, 1923. Serial No. 650,367. 1 Claim. (Cl. 151—37.)

A device of the character described comprising a member adapted to be rotated around an axis, the member having outward of its axis a groove on the work engaging face of the member extending inward from one side face thereof, there being an axially extending socket at the end of said groove, and a locking pawl of resilient material having a curved body portion sharpened at one end and adapted to lie against the side face of the member, that extremity of the pawl remote from the sharpened end being bent at right angles to the body of the pawl to lie within said groove and having a terminal end bent to extend axially into said socket.



1,482,670. GRAND PIANO. JAMES H. WILLIAMS, Baltimore, Md. Filed July 6, 1921. Serial No. 482,720. 3 Claims. (Cl. 84—189.)

3. A piano of the horizontal type having a marginal soundboard supporting frame comprising a transverse front member and a continuous partly curved member, each of said members having an uninterrupted channel formed therein with its terminals in communication with those of the channel in the other member and also having bracing members, connecting the transverse and

partly curved members and provided with channels in open communication with the said connected channels therein.

1,482,671. THREAD-CONTROLLING MECHANISM FOR SEWING MACHINES. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Dec. 21, 1921. Serial No. 523,843. 8 Claims. (Cl. 112—241.)
